Preface

About this Manual

This manual is written for professional system integrators and PC technicians. It provides information for the installation and use of the chassis. Installation and maintenance should be performed by experienced technicians only.

This document lists compatible parts available when this document was published. Refer to the Supermicro web site for updates on supported parts and configurations.

Warnings

Special attention should be given to the following symbols used in this manual.

Warning! Indicates important information given to prevent equipment/property damage or personal injury.

Warning! Indicates high voltage may be encountered when performing a procedure.

Chapter 1

Introduction

1-1 Overview

The Supermicro SC213 chassis features a direct-attached SAS3 backplane supporting sixteen 2.5" SAS/SATA hard disk drives. It has dual highly efficient redundant power supplies, an optional DVD drive, two USB ports, three 80mm fans, and room for seven PCI Express expansion cards.

1-2 Shipping List

Visit the Supermicro web site for the latest shipping lists and part numbers for your particular chassis model at www.supermicro.com.

1-3 Chassis Features

The SC213 3U high-performance chassis includes the following features:

Motherboard Support
The chassis supports motherboard sizes of 13.68" x 13.0", E-ATX, ATX form factors. It supports dual and single Intel and AMD processors.

Drives
The chassis supports up to sixteen 2.5" hot-swap SAS or SATA drives with SES2. With RAID, these drives may be replaced without powering down the server. It also supports one slim DVD drive (optional).

PCI Expansion Slots
Each version of the chassis includes seven slots with sizes depending on the model.

Cooling
Three hot-plug 80mm fans provide cooling, aided by an air shroud. The 4-pin fans are controlled through IPMI.

Control Panel
The front control panel includes system status LED indicators and power switches.

Cables
To determine what cables are needed for your system, check the connector type of your system backplane and motherboard. Then consult the Supermicro website. https://www.supermicro.com/ResourceApps/Cable_Matrix.aspx
1-4 Returning Merchandise for Service

A receipt or copy of your invoice marked with the date of purchase is required before any warranty service will be rendered. You can obtain service by calling your vendor for a Returned Merchandise Authorization (RMA) number. When returning to the manufacturer, the RMA number should be prominently displayed on the outside of the shipping carton, and mailed prepaid or hand-carried. Shipping and handling charges will be applied for all orders that must be mailed when service is complete.

For faster service, RMA authorizations may be requested online (http://www.supermicro.com/support/rma/).

Whenever possible, repack the chassis in the original Supermicro carton, using the original packaging material. If these are no longer available, be sure to pack the chassis securely, using packaging material to surround the chassis so that it does not shift within the carton and become damaged during shipping.

This warranty only covers normal consumer use and does not cover damages incurred in shipping or from failure due to the alteration, misuse, abuse or improper maintenance of products.

During the warranty period, contact your distributor first for any product problems.

1-5 Where to Get Replacement Components

Although not frequently, you may need replacement parts for your system. To ensure the highest level of professional service and technical support, we strongly recommend purchasing exclusively from our Supermicro Authorized Distributors/System Integrators/Resellers. A list of Supermicro Authorized Distributors/System Integrators/Resellers can be found at: www.supermicro.com. Click the Where to Buy link.
Chapter 2

Rack Installation

This chapter provides instructions for preparing and mounting your chassis in a rack.

2-1 Unpacking the System

You should inspect the box the chassis was shipped in and note if it was damaged in any way. If the chassis itself shows damage, file a damage claim with the carrier who delivered it.

2-2 Preparing for Setup

Decide on a suitable location for the rack unit that will hold your chassis. It should be a clean, dust-free area that is well ventilated. Avoid areas where heat, electrical noise and electromagnetic fields are generated. A nearby grounded power outlet is required.

The box your chassis was shipped in should include two sets of rail assemblies, two rail mounting brackets and the mounting screws to mount the system into the rack. Please read this chapter in its entirety before beginning the installation procedure.

Choosing a Setup Location

- Leave at least 25 inches clearance in front of the rack to open the front door completely.
- Leave approximately 30 inches of clearance in the back of the rack to allow for sufficient airflow and access for servicing.
- It should be a restricted access location, such as a dedicated equipment room or a service closet.
2-3  Warnings and Precautions

Rack Precautions

• Ensure that the leveling jacks on the bottom of the rack are fully extended to
  the floor with the full weight of the rack resting on them.

• In single rack installations, stabilizers should be attached to the rack.

• In multiple rack installations, the racks should be coupled together.

• Always make sure that the rack is stable before extending a component from
  the rack.

• Only one chassis should be extended from the rack at a time. Extending two or
  more chassis simultaneously may cause the rack to become unstable.

General Server Precautions

• Review the electrical and general safety precautions that came with the
  components you are adding to your chassis.

• Determine the placement of each component in the rack before you install the
  rails.

• Install the heaviest server components on the bottom of the rack first, and then
  work upward.

• Use a regulating uninterruptible power supply (UPS) to protect the server from
  power surges, voltage spikes and to keep your system operating in case of a
  power failure.

• Allow the hot-swappable hard drives and power supply modules to cool before
  touching them.

• Always keep the rack's front door and all panels and components on the servers
  closed when not servicing to maintain proper cooling.
Rack Mounting Considerations

Ambient Operating Temperature
If installed in a closed or multi-unit rack assembly, the ambient operating temperature of the rack environment may be greater than the ambient temperature of the room. Therefore, consideration should be given to installing the equipment in an environment compatible with the manufacturer’s maximum rated ambient temperature (TMRA).

Sufficient Airflow
Equipment should be mounted into a rack so that the amount of airflow required for safe operation is not compromised.

Circuit Overloading
Consideration should be given to the connection of the equipment to the power supply circuitry and the effect that any possible overloading of circuits might have on overcurrent protection and power supply wiring. Appropriate consideration of equipment nameplate ratings should be used when addressing this concern.

Reliable Ground
A reliable ground must be maintained at all times. To ensure this, the rack itself should be grounded. Particular attention should be given to power supply connections other than the direct connections to the branch circuit (i.e. the use of power strips, etc.).

Warning: To prevent bodily injury when mounting or servicing this unit in a rack, you must take special precautions to ensure that the system remains stable. The following guidelines are provided to ensure your safety:

- This unit should be mounted at the bottom of the rack if it is the only unit in the rack.

- When mounting this unit in a partially filled rack, load the rack from the bottom to the top with the heaviest component at the bottom of the rack.

- If the rack is provided with stabilizing devices, install the stabilizers before mounting or servicing the unit in the rack.

- Slide rail mounted equipment is not to be used as a shelf or a work space.
2-4 Installing the System into a Rack

This section provides information on installing the server into a rack unit with the rack rails provided. There are a variety of rack units on the market, so the assembly procedure may differ slightly. Refer to the installation instructions that came with your rack. **Note:** This rail will fit a rack between 26.5" and 36.4" deep.

**Identifying the Sections of the Rack Rails**

The chassis package includes two rail assemblies. Each assembly consists of three sections: An inner rail that secures directly to the chassis, an outer rail that secures to the rack, and a middle rail which extends from the outer rail. These assemblies are specifically designed for the left and right side of the chassis.

![Diagram of Rail Assemblies](Figure 2-1. Identifying the Outer Rail, Middle Rail and Inner Rail)

(Left Rail Assembly Shown)
Releasing the Inner Rail

Each inner rail has a locking latch. This latch prevents the server from coming completely out of the rack when when the chassis is pulled out for servicing.

To mount the rail onto the chassis, first release the inner rail from the outer rails.

Releasing Inner Rail from the Outer Rails

1. Pull the inner rail out of the outer rail until it is fully extended as illustrated below.

2. Press the locking tab down to release the inner rail.

3. Pull the inner rail all the way out.

4. Repeat for the other outer rail.

Figure 2-2. Extending and Releasing the Inner Rail
Installing the Inner Rails on the Chassis

Installing the Inner Rails

1. Identify the left and right inner rails. They are labeled.

2. Place the inner rail firmly against the side of the chassis, aligning the hooks on the side of the chassis with the holes in the inner rail.

3. Slide the inner rail forward toward the front of the chassis until the quick release bracket snaps into place, securing the rail to the chassis.

4. Optionally, you can further secure the inner rail to the chassis with a screw.

5. Repeat for the other inner rail.
Installing the Outer Rails onto the Rack

Installing the Outer Rails

1. Press upward on the locking tab at the rear end of the middle rail.

2. Push the middle rail back into the outer rail.

3. Hang the hooks on the front of the outer rail onto the square holes on the front of the rack. If desired, use screws to secure the outer rails to the rack.

4. Pull out the rear of the outer rail, adjusting the length until it just fits within the posts of the rack.

5. Hang the hooks of the rear section of the outer rail onto the square holes on the rear of the rack. Take care that the proper holes are used so the rails are level. If desired, use screws to secure the rear of the outer rail to the rear of the rack.

Stability hazard. The rack stabilizing mechanism must be in place, or the rack must be bolted to the floor before you slide the unit out for servicing. Failure to stabilize the rack can cause the rack to tip over.

Do not use a two post "telco" type rack.

Figure 2-5. Extending and Mounting the Outer Rails
Sliding the Chassis onto the Rack Rails

**Warning:** Mounting the system into the rack requires at least two people to support the chassis during installation. Please follow safety recommendations printed on the rails.

**Installing the Chassis into a Rack**

1. Extend the outer rails as illustrated above.

2. Align the inner rails of the chassis with the outer rails on the rack.

3. Slide the inner rails into the outer rails, keeping the pressure even on both sides. When the chassis has been pushed completely into the rack, it should click into the locked position.

4. Optional screws may be used to hold the front of the chassis to the rack.

**Ball-Bearing Shuttle**

Figure 2-6. Installing into a Rack

**Note:** The figure above is for illustrative purposes only. Always install servers to the bottom of the rack first.

**Caution:** Do not pick up the server with the front handles. They are designed to pull the system from a rack only.
3-1 Overview

The server includes a control panel on the front that houses power buttons and status monitoring lights. The externally accessible hard drives display status lights. The power supply displays status lights visible from the back of the chassis.

Figure 3-1. Front Control Panel
3-2 Control Panel Buttons

The chassis includes two push-buttons that control power to the system.

Power
The main power switch applies or removes primary power from the power supply to the server but maintains standby power. To perform most maintenance tasks, unplug the system to remove all power.

Reset
The reset button is used to reboot the system.

3-3 Control Panel LEDs

There are six LEDs that provide status information about the system.

Power
Indicates power is being supplied to the system power supply units. This LED is illuminated when the system is operating normally.

HDD
Indicates activity on the hard disk drive when flashing.
NIC2
Indicates network activity on GLAN2 when flashing.

NIC1
Indicates network activity on GLAN1 when flashing.

Information LED
Alerts operator to several states, as noted in the table below.

<table>
<thead>
<tr>
<th>Information LED</th>
<th>Status</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Continuously on and red</td>
<td>An overheat condition has occurred. (This may be caused by cable congestion.)</td>
</tr>
<tr>
<td></td>
<td>Blinking red (1Hz)</td>
<td>Fan failure, check for an inoperative fan.</td>
</tr>
<tr>
<td></td>
<td>Blinking red (0.25Hz)</td>
<td>Power failure, check for a non-operational power supply.</td>
</tr>
<tr>
<td></td>
<td>Solid blue</td>
<td>Local UID has been activated. Use this function to locate the server in a rack mount environment.</td>
</tr>
<tr>
<td></td>
<td>Blinking blue</td>
<td>Remote UID is on. Use this function to identify the server from a remote location.</td>
</tr>
</tbody>
</table>

Power Fail
Indicates a power supply module has failed.
Overheating
There are several possible responses if the system overheats.

Overheat Temperature Setting
Some backplanes allow the overheat temperature to be set at 45, 50, or 55 by changing a jumper setting. For more information, consult the backplane user manual at www.supermicro.com. (Click Support, then the Manuals link.)

Responses
If the server overheats:
1. Use the LEDs to determine the nature of the overheating condition.
2. Confirm that the chassis covers are installed properly.
3. Check the routing of the cables and make sure all fans are present and operating normally.
4. Verify that the heatsinks are installed properly.

3-4 Drive Carrier LEDs
The chassis includes externally accessible SAS/SATA drives. Each drive carrier displays two status LEDs on the front of the carrier.

<table>
<thead>
<tr>
<th>LED Color</th>
<th>Blinking Pattern</th>
<th>Behavior for Device</th>
</tr>
</thead>
<tbody>
<tr>
<td>Activity LED</td>
<td></td>

<td>Identify drive for SAS/SATA with RSTe support</td>
</tr>
</tbody>
</table>
3-5  **Power Supply LEDs**

On the rear of the power supply module, an LED displays the status.

- **Solid Green**: When illuminated, indicates that the power supply is on.

- **Solid Amber**: When illuminated, indicates the power supply is plugged in and turned off, or the system is off but in an abnormal state.

- **Blinking Amber**: When blinking, this system power supply temperature has reached 63°C. The system will automatically power-down when the power supply temperature reaches 70°C and restart when the power supply temperature goes below 60°C.
Chapter 4

Chassis Setup and Maintenance

4-1 Overview

This chapter covers the steps required to install components and perform maintenance on the chassis. The only tool required is a Phillips screwdriver.

Review the warnings and precautions listed in the manual before setting up or servicing this chassis. These include information in Chapter 2: System Safety and the warning/precautions listed in the setup instructions.

Figure 4-1. Front View

Control Panel
Primary Hot-Swap HDDs (16)

Figure 4-2. Rear View LP Models

Low Profile Expansion Slots

Figure 4-3. Rear View W and U Models

Low Profile Expansion Slots
Full-Height Expansion Slots
4-2 Removing Power from the System

Before performing some setup or maintenance tasks, use the following procedure to ensure that power has been removed from the system.

1. Use the operating system to power down the node, following the on-screen prompts.

2. After the system has completely shut-down, carefully grasp the head of the power cord and gently pull it out of the back of the power supply. If your system has dual power supplies, remove the cords from both power supplies.

3. Disconnect the cord from the power strip or wall outlet.
4-3 Removing the Chassis Cover

Removing the Chassis Cover

1. Press both release tabs at the same time to release the cover from the locked position.

2. Once the top cover has been released, slide the cover backwards, toward the rear of the chassis.

3. Lift the cover up and off the chassis.

Caution: Except for short periods of time, do not operate the server without the cover in place. The chassis cover must be in place to allow proper airflow and prevent overheating.

Figure 4-4. Removing the Chassis Cover
4-4 Installing Hard Drives

The chassis supports sixteen hot-swap hard drives. Only SAS or enterprise SATA HDDs are recommended. The drives are mounted in drive carriers to simplify their installation and removal from the chassis. These carriers also help promote proper airflow for the drive bays.

Removing a Hard Drive Carrier from the Bay

1. Press the release button on the drive carrier. This extends the drive carrier handle.

2. Hold the handle to pull the tray out of the chassis.
Installing a Hard Drive into a Drive Carrier

1. Insert a drive into the carrier with the PCB side facing down and the connector end toward the rear of the carrier.

2. Align the drive in the carrier so that the mounting holes of both are aligned. Note that there are holes in the carrier marked "SAS" or "SATA" to aid in correct installation.

3. Secure the drive to the carrier with four screws as illustrated above. Use the four M3 flat-head screws included in the HDD bag of your accessory box. Note that the screws used to secure the dummy drive to the tray cannot be used to secure the hard drive.

4. Insert the hard drive and drive carrier into its bay vertically, keeping the carrier oriented so that the release button is on the bottom. When the carrier reaches the rear of the bay, the release handle will retract.

5. Using the thumb, push against the upper part of the hard drive handle. Push the hard drive into the hard drive bay as illustrated below, until the hard drive clicks into the locked position.
4-5 Installing Expansion Cards

For the LP models, such as SC213AC-R920LPB, the chassis slots are vertical and allow the addition of low profile expansion cards. For the W models such as SC213AC-R920WB, and the U models such as SC213A-R720UB the chassis slots are horizontal. The U models allow a Supermicro universal I/O (UIO) card in addition to expansion cards.

The serverboard must be installed before expansion cards.

Expansion Cards for an LP Model Chassis

The LP model chassis includes seven slots for low profile expansion cards.

Installing an Expansion Card for an LP Model Chassis

1. Power down the system as described in Section 4-2 and remove the cover.

![Figure 4-8. Remove an LP Expansion Card Slot Shield](image)

2. In the rear of the chassis, remove the blank PCI shield that is pre-installed covering the expansion slot.

3. Slide the expansion card into the expansion slot on the serverboard while aligning it with the chassis slot in the rear of the chassis.

4. Secure the expansion card shield onto the rear of the chassis with a screw.

Expansion Cards for a W or U Model Chassis

The W or U model chassis accommodates expansion cards using riser cards. If your serverboard supports a Supermicro universal I/O (UIO) card, the U model chassis
supports an additional three full-height expansion cards and three low profile expansion cards. If the serverboard does not support a UIO, then the W model chassis supports four full-height expansion cards and three low profile expansion cards.

**Installing a UIO Card**

1. Power down the system as described in Section 4-2 and remove the cover.

2. Release the clamp that secures all four full-height PCI shields (Figure 4-9). Looking at the rear of the chassis, this clamp is in the right corner. Unscrew the single screw that secures the clamp and rotate the clamp away from the shields. Remove the blank PCI shield covering the expansion slot in the chassis.

3. Place the UIO card horizontally in the rear left area of the chassis bottom and insert it into the UIO slot in the serverboard, while aligning it with slot in the rear of the chassis.

4. Secure the shield to the rear of the chassis with the lever.

**Installing an Expansion Card for a W or U Model Chassis**

1. If this is the first expansion card, start by locating the riser card bracket in your chassis accessory bag, and one or two riser cards, which are purchased separately. One riser card accommodates the full-height expansion cards and another riser card accommodates the three low profile expansion cards.

2. Power down the system as described in Section 4-2 and remove the cover.

![Figure 4-9. Riser Card Bracket](image-url)
3. Attach the riser card(s) to the riser card bracket using screws. Note that there are different cards for the right and left side of the bracket.

4. Insert the riser card(s) into the serverboard expansion slot(s) while aligning the riser card bracket with the rear of the chassis. Secure the bracket with screws (Figure 4-9).

5. For a **full-height** extension card, release the clamp that secures all four PCI shields. Looking at the rear of the chassis, this clamp is in the right corner. Unscrew the single screw that secures the clamp and rotate the clamp away from the shields.

   For a **low profile** extension card, release the box-shaped clamp that secures all three PCI shields. Looking at the rear of the chassis, this clamp is near the middle, just left of the low profile PCI slots. Unscrew the single screw that secures the clamp and slide the clamp to the left away from the shields.

6. Insert the expansion card into a slot on the riser card while aligning the expansion card backplate with the open slot in the rear of the chassis. Repeat for other expansion cards if you are installing more than one.

7. Secure the card backplates to the chassis by returning the clamp to the closed position and installing the locking screw.

8. Replace the chassis cover and power up.
4-6 Installing the Air Shroud

Air shrouds concentrate airflow to maximize fan efficiency. It does not require screws for installation. UIO models require an additional air shroud that must be installed before the main shroud.

**Figure 4-11. Installing the Main Air Shroud**

**Installing the Main Air Shroud**

1. Lay the chassis on a flat, stable surface and remove the chassis cover.

2. If necessary, move any cables that interfere with the air shroud placement.

3. Place the air shroud in the chassis. The air shroud fits just behind the three fans in the fan rack. Slide the air shroud into the grooves just behind the fan rack. Note that some serverboards may require the air shroud to be modified to fit over the serverboard. The SC213 air shroud is designed with break-away pieces that may be removed to accommodate differing styles of serverboards.
Figure 4-12. Installing the UIO Model Air Shroud

An additional air shroud is required for high-powered CPUs, to provide extra cooling. Install the additional air shroud if necessary.

*Installing the UIO Air Shroud*

1. Remove the left side break-away piece of the main air shroud.

2. Slide the additional air shroud into the chassis before installing the main air shroud.

3. Install the main air shroud as directed on the previous page.
4-7 Power Supply

The chassis has a redundant power supply. Redundant power supplies are hot-swappable, and can be changed without powering down the system. New units can be ordered directly from Supermicro. Replace a failed power module with the same model.

This power supply is auto-switching capable. This enables it to automatically sense and operate at a 100v to 240v input voltage. An amber light will be illuminated on the power supply when the power is off. An illuminated green light indicates that the power supply is operating.

Changing the Power Supply

1. Push the release tab on the back of the power supply module.

2. While holding down the release tab, pull the power supply out using the handle.

3. Push the new power supply module into the power bay until the tab clicks into the locked position.

4. Plug the AC power cord back into the module and the replacement power module will automatically power-up.

Figure 4-13. Removing the Power Supply
4-8 Installing the Power Distributor

The power distributor provides failover and power supply redundancy and is pre-installed in the chassis. In the rare event that you have to replace the power distributor, follow the steps below.

Changing the Power Distributor

1. Power down the server as describe is Section 4-2.

2. Remove all cable connections to the power supply from the serverboard, backplane, and other components. Also, remove both power supply modules.

3. Remove the screws securing the power distributor.

4. Gently pull the power distributor from the chassis. Gently guide all the cables through the power distributor housing.

5. Slide the new power distributor module into the power distributor housing. Make that you slide the cables through the bottom of the housing.

6. Reconnect all the power cables, replace the power supply, and insert the plug into the wall.
4-9 Removing the Backplane

The backplane is located behind the hard drives and in front of the front system fans. In order to change jumper settings on the backplane, it may be necessary to remove the backplane from the chassis.

**Removing the Backplane from the Chassis**

1. Power down the server as described in Section 4-2 and remove the chassis cover.

2. Disconnect the cabling to the backplane.

3. Remove all of the hard drives from the drive bays in the front of the chassis.

4. Remove the three upper screws at the top of the backplane, indicated by the arrows below.

![Figure 4-15. Removing the Screws at the Top of the Backplane](image-url)
5. Loosen but do not remove the three screws in the spring bar, located on the floor of the chassis, indicated by the arrows below.

![Loosening the Spring Bar Screws in the Floor of the Chassis](image)

Figure 4-16. Loosening the Spring Bar Screws in the Floor of the Chassis

6. Gently ease the backplane up and out of the chassis.

**Installing the Backplane into the Chassis**

1. Ensure that all of the hard drive trays have been removed from the bays in the front of the chassis and that the spring bar has been loosened as directed in the previous section.

2. Slide the backplane into the chassis at a slight angle, pushing it up against the side of the chassis.

3. Ease the backplane forward, against the front of the chassis. This will aid in the alignment of the mounting holes.

4. Align the mounting holes in the backplane with the holes in the chassis. Replace the three screws at the top of the backplane and the three screws in the floor of the chassis.

5. Reconnect all cables and return the hard drive trays to their bays in the front of the chassis.
This appendix lists power supply specifications for your chassis system.

Appendix B

Standardized Warning Statements for AC Systems

About Standardized Warning Statements

The following statements are industry standard warnings, provided to warn the user of situations which have the potential for bodily injury. Should you have questions or experience difficulty, contact Supermicro's Technical Support department for assistance. Only certified technicians should attempt to install or configure components.

Read this appendix in its entirety before installing or configuring components in the Supermicro chassis.

These warnings may also be found on our web site at http://www.supermicro.com/about/policies/safety_information.cfm.

Warning Definition

Warning!

This warning symbol means danger. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents.

警告の定義
この警告サインは危険を意味します。人身事故につながる可能性がありますので、いずれの機器でも動作させる前に、電気回路に含まれる危険性に注意して、標準的な事故防止策に精通して下さい。

此警告符号代表危险。

您正处于可能受到严重伤害的工作环境中。在您使用设备开始工作之前，必须充分意识到触电的危险，并熟练掌握防止事故发生的标准工作程序。请根据每项警告结尾的声明号码找到此设备的安全性警告说明的翻译文本。

此警告符号代表危险。

您正处于可能身体可能会受损伤的工作环境中。在您使用任何设备之前，请注意触电的危险，並且要熟悉預防事故發生的標準工作程序。請依照每一注意事項後的號碼找到相關的翻譯說明內容。

تحذير! هذا الرمز يعني خطر انك في حالة يمكن ان تتسبب في اصابة جسدية.

قبل أن تعمل على أي معدات، كن على علم بالمخاطر الناجمة عن الدوائر الكهربائية

وكن على دراية بالمارسات الوقائية لمنع وقوع أي حوادث

استخدم رقم البيان المنصوص في نهاية كل تحذير للعثور ترجمتها

BELANGRIJKE VEILIGHEIDSINSTRUCTIES

Dit waarschuwings symbool betekent gevaar. U verkeert in een situatie die lichamelijk letsel kan veroorzaken. Voordat u enige apparatuur gaat werken, dient u zich bewust te zijn van de bij een elektrische installatie betrokken risico's en dient u op de hoogte te zijn van de standaard procedures om ongelukken te voorkomen. Gebruik de nummers aan het eind van elke waarschuwing om deze te herleiden naar de desbetreffende locatie.

BEWAAR DEZE INSTRUCTIES
**Installation Instructions**

**Warning!**

Read the installation instructions before connecting the system to the power source.

警告
将此系统连接电源前，请先阅读安装说明。

警告
将系统与电源连接前，请先阅读安装说明。

Warnung
Vor dem Anschließen des Systems an die Stromquelle die Installationsanweisungen lesen.

¡Advertencia!
Lea las instrucciones de instalación antes de conectar el sistema a la red de alimentación.

Attention
Avant de brancher le système sur la source d'alimentation, consulter les directives d'installation.

Circuit Breaker

Warning!

This product relies on the building’s installation for short-circuit (overcurrent) protection. Ensure that the protective device is rated not greater than: 250 V, 20 A.

Warning

¡Advertencia!

Este equipo utiliza el sistema de protección contra cortocircuitos (o sobrecorrientes) del edificio. Asegúrese de que el dispositivo de protección no sea superior a: 250 V, 20 A.

Attention

Pour ce qui est de la protection contre les courts-circuits (surtension), ce produit dépend de l’installation électrique du local. Vérifiez que le courant nominal du dispositif de protection n’est pas supérieur à : 250 V, 20 A.
Power Disconnection Warning

Warning!

The system must be disconnected from all sources of power and the power cord removed from the power supply module(s) before accessing the chassis interior to install or remove system components.

경고!

이 제품은 전원의 단락(과전류)방지에 대해서 전적으로 건물의 관련 설비에 의존합니다. 보호장치의 정격이 반드시 250V(볼트), 20A(암페어)를 초과하지 않도록 해야 합니다.

Waarschuwing

Dit product is afhankelijk van de kortsluitbeveiliging (overspanning) van uw electrische installatie. Controleer of het beveiligde apparaat niet groter gedimensioneerd is dan 220V, 20A.

Warning!

Das System muss von allen Quellen der Energie und vom Netzanschlusskabel getrennt sein, das von den Spg.Versorgungsteilmodulen entfernt wird, bevor es
Appendix B: Warning Statements for AC Systems

auf den Chassisinnenraum zurückgreift, um Systemsbestandteile anzubringen oder zu entfernen.

¡Advertencia!
El sistema debe ser disconnected de todas las fuentes de energía y del cable eléctrico quitado de los módulos de fuente de alimentación antes de tener acceso al interior del chasis para instalar o para quitar componentes de sistema.

Attention
Le système doit être débranché de toutes les sources de puissance ainsi que de son cordon d'alimentation secteur avant d'accéder à l'intérieur du chassis pour installer ou enlever des composants de système.

경고!
시스템에 부품들을 장착하거나 제거하기 위해서는 세시 내부에 접근하기 전에 반드시 전원 공급장치로부터 연결되어있는 모든 전원과 전기코드를 분리해주어야 합니다.

Waarschuwing
Voordat u toegang neemt tot het binnenwerk van de behuizing voor het installeren of verwijderen van systeem onderdelen, dient u alle spanningsbronnen en alle stroomkabels aangesloten op de voeding(en) van de behuizing te verwijderen.
Equipment Installation

Warning!

Only trained and qualified personnel should be allowed to install, replace, or service this equipment.

警告

只有经过培训且具有资格的人员才能进行此设备的安装、更换和维修。

경고!

훈련을 받고 공인된 기술자만이 이 장비의 설치, 교체 또는 서비스를 수행할 수 있습니다。

¡Advertencia!

Solamente el personal calificado debe instalar, reemplazar o utilizar este equipo.

경고!

훈련중인 기술자만이 이 장비의 설치, 교체 또는 서비스를 수행할 수 있습니다.
Warning!

This unit is intended for installation in restricted access areas. A restricted access area can be accessed only through the use of a special tool, lock and key, or other means of security. (This warning does not apply to workstations).
Battery Handling

Warning!

There is the danger of explosion if the battery is replaced incorrectly. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

電池の取り扱い

電池交換が正しく行われなかった場合、破裂の危険性があります。交換する電池はメーカーが推奨する型、または同等のものを使用下さい。使用済電池は製造元の指示に従って処分して下さい。

警告

电池更换不当会有爆炸危险。请只使用同类电池或制造商推荐的功能相当的电池更换原有电池。请按制造商的说明处理废旧电池。

警告

電池更换不当会有爆炸危险。请使用製造商建議之相同或功能相當的電池更换原有電池。請按照製造商的說明指示處理廢棄舊電池。
Warnung

Attention
Danger d’explosion si la pile n’est pas remplacée correctement. Ne la remplacer que par une pile de type semblable ou équivalent, recommandée par le fabricant. Jeter les piles usagées conformément aux instructions du fabricant.

¡Advertencia!
Existe peligro de explosión si la batería se reemplaza de manera incorrecta. Reemplazar la batería exclusivamente con el mismo tipo o el equivalente recomendado por el fabricante. Desechar las baterías gastadas según las instrucciones del fabricante.

경고!
배터리가 올바르게 교체되지 않으면 폭발의 위험이 있습니다. 기존 배터리와 동일하거나 제조사에서 권장하는 동등한 종류의 배터리로만 교체해야 합니다. 제조사의 안내에 따라 사용된 배터리를 처리하여 주십시오.

Waarschuwing
Er is ontploffingsgevaar indien de batterij verkeerd vervangen wordt. Vervang de batterij slechts met hetzelfde of een equivalent type die door de fabrikant aanbevolen wordt. Gebruikte batterijen dienen overeenkomstig fabrieksvoorschriften afgevoerd te worden.
Redundant Power Supplies

Warning!

This unit might have more than one power supply connection. All connections must be removed to de-energize the unit.

冗長電源装置
このユニットは複数の電源装置が接続されている場合があります。
ユニットの電源を切るためには、すべての接続を取り外さなければなりません。

警告
此部件连接的电源可能不止一个，必须将所有电源断开才能停止给该部件供电。

¡Advertencia!
Puede que esta unidad tenga más de una conexión para fuentes de alimentación. Para cortar por completo el suministro de energía, deben desconectarse todas las conexiones.

Warnung
Dieses Gerät kann mehr als eine Stromzufuhr haben. Um sicherzustellen, dass der Einheit kein trom zugeführt wird, müssen alle Verbindungen entfernt werden.

¡Advertencia!
Puede que esta unidad tenga más de una conexión para fuentes de alimentación. Para cortar por completo el suministro de energía, deben desconectarse todas las conexiones.

Attention
Cette unité peut avoir plus d'une connexion d'alimentation. Pour supprimer toute tension et tout courant électrique de l'unité, toutes les connexions d'alimentation doivent être débranchées.

أم كيم يتفر مسفك أتفر

¡Advertencia!
Puede que esta unidad tenga más de una conexión para fuentes de alimentación. Para cortar por completo el suministro de energía, deben desconectarse todas las conexiones.

警告
此装置连接的电源可能不只一个，必须切断所有电源才能停止对该装置的供電。
Appendix B: Warning Statements for AC Systems

**Backplane Voltage**

**Warning!**

Hazardous voltage or energy is present on the backplane when the system is operating. Use caution when servicing.

시스템의 전원 공급 단자가 연결되어 있을 수 있습니다. 이 장치에 전원을 차단하기 위해서는 모든 연결 단자를 제거해야만 합니다.

**Waarschuwing**

Deze eenheid kan meer dan één stroomtoevoeraansluiting bevatten. Alle aansluitingen dienen verwijderd te worden om het apparaat stroomloos te maken.

**경고!**

이 장치에는 한 개 이상의 전원 공급 단자가 연결되어 있을 수 있습니다. 이 장치에 전원을 차단하기 위해서는 모든 연결 단자를 제거해야만 합니다.

**¡Advertencia!**

Cuando el sistema está en funcionamiento, el voltaje del plano trasero es peligroso. Tenga cuidado cuando lo revise.

**Warnung**

Wenn das System in Betrieb ist, treten auf der Rückwandplatine gefährliche Spannungen oder Energien auf. Vorsicht bei der Wartung.

**警告**

当系统正在进行时，背板上有很危险的电压或能量，进行维修时务必小心。

**警告**

當系統正在進行時，背板上有危險的電壓或能量，進行維修時務必小心。

**Attention**

Lorsque le système est en fonctionnement, des tensions électriques circulent sur le fond de panier. Prendre des précautions lors de la maintenance.
Comply with Local and National Electrical Codes

**Warning!**

Installation of the equipment must comply with local and national electrical codes.

地方および国の電気規格に準拠

機器の取り付けはその地方および国の電気規格に準拠する必要があります。

警告

设备安装必须符合本地与本国电气法规。

警告

設備安裝必須符合本地與本國電氣法規。

**Warnung**

Die Installation der Geräte muss den Sicherheitsstandards entsprechen.

¡Advertencia!

La instalación del equipo debe cumplir con las normas de electricidad locales y nacionales.
Appendix B: Warning Statements for AC Systems

Product Disposal

Warning!

Ultimate disposal of this product should be handled according to all national laws and regulations.

製品の廃棄

この製品を廃棄処分する場合、国の関係する全ての法律・条例に従い処理する必要があります。

警告

本产品的废弃处理应根据所有国家的法律和规章进行。

Warnung

Die Entsorgung dieses Produkts sollte gemäß allen Bestimmungen und Gesetzen des Landes erfolgen.
¡Advertencia!
Al deshacerse por completo de este producto debe seguir todas las leyes y reglamentos nacionales.

Attention
La mise au rebut ou le recyclage de ce produit sont généralement soumis à des lois et/ou directives de respect de l'environnement. Renseignez-vous auprès de l'organisme compétent.

Hot Swap Fan Warning

Warning!

Hazardous moving parts. Keep away from moving fan blades. The fans might still be turning when you remove the fan assembly from the chassis. Keep fingers, screwdrivers, and other objects away from the openings in the fan assembly's housing.

警告！回転部品に注意。運転中は回転部(羽根)に触れないでください。シャーシから冷却ファン装置を取り外した際、ファンがまだ回転している可能性があります。ファンの開口部、指、ドライバー、およびその他のものを近づけないで下さい。

警告！危险的可移动性零件。请务必与转动的风扇叶片保持距离。 当您从机架移除风扇装置，风扇可能仍在转动。小心不要将手指、螺丝起子和其他物品太靠近风扇
Appendix B: Warning Statements for AC Systems

Warning

Dangerous moving parts. Keep a safe distance from the rotating fan blades. When you remove the fan assembly from the chassis, the fans may still be rotating. Be careful not to have fingers, screwdrivers and other objects too close to the fan openings.

¡Advertencia!

Riesgo de piezas móviles. Mantener alejado de las aspas del ventilador. Los ventiladores pueden dar vuelta cuando usted quite el montaje del ventilador del chasis. Mantenga los dedos, los destornilladores y todos los objetos lejos de las aberturas del ventilador.

Warnung

¡Advertencia!

Riesgo de piezas móviles. Mantener alejado de las aspas del ventilador. Los ventiladores pueden dar vuelta cuando usted quite el montaje del ventilador del chasis. Mantenga los dedos, los destornilladores y todos los objetos lejos de las aberturas del ventilador.
Warning! When installing the product, use the provided or designated connection or procure cables, power cables and AC adaptors complying with local codes and safety requirements including proper cord size and plug. Using any other cables and adaptors could cause a malfunction or a fire. Electrical Appliance and Material Safety Law prohibits the use of UL or CSA-certified cables (that have UL/CSA shown on the code) for any other electrical devices than products designated by Supermicro only.

警告
安装此产品时，请使用本身提供的或指定的或采购的连接线,电源线和电源适配器，包含遵照当地法规和安全要求的合规的电源线尺寸和插头。使用其它线材或适配器可能会引起故障或火灾。除了Supermicro所指定的产品,电气用品和材料安全法律规定禁止 使用未经UL或CSA认证的线材。(线材上会显示UL/CSA符号)。

警告
安裝此產品時,請使用本身提供的或指定的或採購的連接線,電源線和電源適配器，包含遵照當地法規和安全要求的合規的電源線尺寸和插頭。使用其它線材或適配器可能會引起故障或火災。除了Supermicro所指定的產品,電氣用品和材料安全法律規定禁止 使用未經UL或CSA認證的線材。 (線材上會顯示UL/CSA符號)。

Warnung
Nutzen Sie beim Installieren des Produkts ausschließlich die von uns zur Verfügung gestellten Verbindungskabeln, Stromkabeln und/oder Adapater, die Ihre örtlichen Sicherheitsstandards einhalten. Der Gebrauch von anderen Kabeln und Adapter können Fehlfunktionen oder Feuer verursachen. Die Richtlinien untersagen das Nutzen von UL oder CAS zertifizierten Kabeln (mit UL/CSA gekennzeichnet), an Geräten oder Produkten die nicht mit Supermicro gekennzeichnet sind.
¡Advertencia!

Cuando instale el producto, utilice la conexión provista o designada o procure cables, Cables de alimentación y adaptadores de CA que cumplan con los códigos locales y los requisitos de seguridad, incluyendo el tamaño adecuado del cable y el enchufe. El uso de otros cables y adaptadores podría causar un mal funcionamiento o un incendio. La Ley de Seguridad de Aparatos Eléctricos y de Materiales prohíbe el uso de cables certificados por UL o CSA (que tienen el certificado UL / CSA en el código) para cualquier otros dispositivos eléctricos que los productos designados únicamente por Supermicro. Attention

Attention

Lors de l'installation du produit, utilisez les cables de connection fournis ou designé ou achetez des cables, cables de puissance et adaptateurs respectant les normes locales et les conditions de securité y compris les tailles de cables et les prises electriques appropries. L'utilisation d'autres cables et adaptateurs peut provoquer un dysfonctionnement ou un incendie. Appareils électroménagers et la Loi sur la Sécurité Matériel interdit l'utilisation de câbles certifies- UL ou CSA (qui ont UL ou CSA indiqué sur le code) pour tous les autres appareils électriques sauf les produits designés par Supermicro seulement.
전원 케이블 및 AC 어댑터

경고! 제품을 설치할 때 현지 코드 및 적절한 굵기의 코드와 플러그를 포함한 안전 요구 사항을 준수하여 제공되거나 지정된 연결 혹은 구매 케이블, 전원 케이블 및 AC 어댑터를 사용하십시오.

다른 케이블이나 어댑터를 사용하면 오작동이나 화재가 발생할 수 있습니다. 전기 용품 안전법은 UL 또는 CSA 인증 케이블 (코드에 UL / CSA가 표시된 케이블) 을 Supermicro가 지정한 제품 이외의 전기 장치에 사용하는 것을 금지합니다.

Stroomkabel en AC-Adapter

Appendix C

BPN-SAS-213A Backplane Specifications

To avoid personal injury and property damage, carefully follow all the safety steps listed below when accessing your system or handling the components.

C-1 ESD Safety Guidelines

Electrostatic Discharge (ESD) can damage electronic components. To prevent damage to your system, it is important to handle it very carefully. The following measures are generally sufficient to protect your equipment from ESD.

• Use a grounded wrist strap designed to prevent static discharge.

• Touch a grounded metal object before removing a component from the antistatic bag.

• Handle the backplane by its edges only; do not touch its components, peripheral chips, memory modules or gold contacts.

• When handling chips or modules, avoid touching their pins.

• Put the card and peripherals back into their antistatic bags when not in use.

C-2 General Safety Guidelines

• Always disconnect power cables before installing or removing any components from the computer, including the backplane.

• Disconnect the power cable before installing or removing any cables from the backplane.

• Make sure that the backplane is securely and properly installed on the motherboard to prevent damage to the system due to power shortage.
C-3  Version Information

The BPN-SAS-213A backplane has been designed to utilize the most up-to-date technology available, providing your system with reliable, high-quality performance.

This manual reflects BPN-SAS-213A Revision 1.00, the most current release available at the time of publication. Always refer to the Supermicro Web site at www.supermicro.com for the latest updates, compatible parts and supported configurations.
Rear Connectors and Jumpers

The following connectors are on the side of the backplane that faces the rear of the chassis. They are marked by silkscreen labels.

Figure C-1. Rear Connectors and Jumpers

Rear Connectors
1. Upgrade Connectors JP69 and JP78
2. I2C Connector #1 (JP37)
3. I2C Connector #2 (JP95)
4. I2C Connector #3 (JP52)
5. I2C Connector #4 (JP96)

11. - 12. ACT_IN:
The activity LED connectors, designated JP26, and JP27 are used to indicate the activity status of each SAS drive. The activity LED connector is located on the front panel. For the activity LED connector to work properly, connect using a 10-pin LED cable. This is only used when the activity LED is not supported by the hard drive.

C-6  Rear Jumper Locations and Pin Definitions

13. JP80 I²C Addr On C0, Off C2 (Not populated)
14. Chip Reset JP36 1-2 Reset, 2-3 No Reset (Not populated)
15. Buzzer Reset* JP18
16. JP84 1-2 SGPIO, 2-3 I²C
17. Chip Reset JP35 1-2 Reset, 2-3 No Reset (Not populated)

Explanation of Jumpers

To modify the operation of the backplane, jumpers can be used to choose between optional settings. Jumpers create shorts between two pins to change the function of the connector. Pin 1 is identified with a square solder pad on the printed circuit board. Note: On two pin jumpers, "Closed" means the jumper is on and "Open" means the jumper is off the pins.

*The buzzer sound indicates that a condition requiring immediate attention has occurred.

The buzzer alarm is triggered by the following conditions:

1. Hard drive failure
2. Fan failure
3. System temperature over 45° Celsius.
I²C and SGPIO Modes and Jumper Settings

This backplane can utilize I²C or SGPIO. SGPIO is the default mode and can be used without making changes to your jumper. The following information details which jumper must be configured to use SGPIO mode or restore your backplane to I²C mode.

BPN-SAS3-213A Backplane Specifications

This manual covers BPN-SAS3-213A connectors, jumpers and indicators.

D-1 ESD Safety Guidelines

Electrostatic Discharge (ESD) can damage electronic components. To prevent damage to your system, it is important to handle it very carefully. The following measures are generally sufficient to protect your equipment from ESD.

• Use a grounded wrist strap designed to prevent static discharge.

• Touch a grounded metal object before removing a component from the antistatic bag.

• Handle the backplane by its edges only; do not touch its components, peripheral chips, memory modules or gold contacts.

• When handling chips or modules, avoid touching their pins.

• Put the card and peripherals back into their antistatic bags when not in use.

D-2 General Safety Guidelines

• Always disconnect power cables before installing or removing any components from the computer, including the backplane.

• Disconnect the power cable before installing or removing any cables from the backplane.

• Make sure that the backplane is securely and properly installed on the motherboard to prevent damage to the system due to power shortage.
D-3 Version Information

The BPN-SAS3-213A backplane has been designed to utilize the most up-to-date technology available, providing your system with reliable, high-quality performance.

This manual reflects BPN-SAS3-213A Revision 1.00, the most current release available at the time of publication. Always refer to the Supermicro Web site at www.supermicro.com for the latest updates, compatible parts and supported configurations.
D-4 Rear Connectors

The following connectors are on the side of the backplane that faces the rear of the chassis. They are marked by silkscreen labels.

6. SAS IN #12-#15: J20
7. For manufacturer's use only: JP26 and JP27
D-5 Rear Connector and Pin Definitions

1. Backplane Main Power Connectors
   The 4-pin connectors, designated JP3, JP4, JP5 and JP6 provide power to the backplane. See the table on the right for pin definitions.

</tr>
</tbody>
</table>

2. Upgrade Connectors
   The upgrade connectors, JP1 and JP2, are used for manufacturer purposes only.

3-6. SAS IN Ports (Sideband included)
   The SAS ports are used to connect the SAS drive cables. The four SAS IN ports are designated J17, J18, J19 and J20. Each port is also compatible with SATA drives.
