The information in this User’s Manual has been carefully reviewed and is believed to be accurate. The vendor assumes no responsibility for any inaccuracies that may be contained in this document, and makes no commitment to update or to keep current the information in this manual, or to notify any person or organization of the updates. Please Note: For the most up-to-date version of this manual, please see our website at www.supermicro.com.

Super Micro Computer, Inc. ("Supermicro") reserves the right to make changes to the product described in this manual at any time and without notice. This product, including software and documentation, is the property of Supermicro and/or its licensors, and is supplied only under a license. Any use or reproduction of this product is not allowed, except as expressly permitted by the terms of said license.

IN NO EVENT WILL Super Micro Computer, Inc. BE LIABLE FOR DIRECT, INDIRECT, SPECIAL, INCIDENTAL, SPECULATIVE OR CONSEQUENTIAL DAMAGES ARISING FROM THE USE OR INABILITY TO USE THIS PRODUCT OR DOCUMENTATION, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. IN PARTICULAR, SUPER MICRO COMPUTER, INC. SHALL NOT HAVE LIABILITY FOR ANY HARDWARE, SOFTWARE, OR DATA STORED OR USED WITH THE PRODUCT, INCLUDING THE COSTS OF REPAIRING, REPLACING, INTEGRATING, INSTALLING OR RECOVERING SUCH HARDWARE, SOFTWARE, OR DATA.

Any disputes arising between manufacturer and customer shall be governed by the laws of Santa Clara County in the State of California, USA. The State of California, County of Santa Clara shall be the exclusive venue for the resolution of any such disputes. Supermicro's total liability for all claims will not exceed the price paid for the hardware product.

FCC Statement: This equipment has been tested and found to comply with the limits for a Class A or Class B digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in industrial environment for Class A device or in residential environment for Class B device. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the manufacturer’s instruction manual, may cause harmful interference with radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case you will be required to correct the interference at your own expense.

California Best Management Practices Regulations for Perchlorate Materials: This Perchlorate warning applies only to products containing CR (Manganese Dioxide) Lithium coin cells. “Perchlorate Material-special handling may apply. See www.dtsc.ca.gov/hazardouswaste/perchlorate”.

WARNING: This product can expose you to chemicals including lead, known to the State of California to cause cancer and birth defects or other reproductive harm. For more information, go to www.P65Warnings.ca.gov.

The products sold by Supermicro are not intended for and will not be used in life support systems, medical equipment, nuclear facilities or systems, aircraft, aircraft devices, aircraft/emergency communication devices or other critical systems whose failure to perform be reasonably expected to result in significant injury or loss of life or catastrophic property damage. Accordingly, Supermicro disclaims any and all liability, and should buyer use or sell such products for use in such ultra-hazardous applications, it does so entirely at its own risk. Furthermore, buyer agrees to fully indemnify, defend and hold Supermicro harmless for and against any and all claims, demands, actions, litigation, and proceedings of any kind arising out of or related to such ultra-hazardous use or sale.

Preface

About this Manual

This manual is written for professional system integrators and PC technicians. It provides information for the installation and use of the chassis. Installation and maintenance should be performed by experienced technicians only.

This document lists compatible parts available when this document was published. Refer to the Supermicro web site for updates on supported parts and configurations.

This manual may be periodically updated without notice. Check the Supermicro website for possible updates. (http://www.supermicro.com).

Notes

Information on this and other chassis is available on the Supermicro website.

- Supermicro product manuals: http://www.supermicro.com/support/manuals/
- Product safety info: http://www.supermicro.com/about/policies/safety_information.cfm

If you have any questions, please contact our support team at: support@supermicro.com.

Warnings

Special attention should be given to the following symbols used in this manual.

⚠️ **Warning!** Indicates important information given to prevent equipment/property damage or personal injury.

⚠️ **Warning!** Indicates high voltage may be encountered when performing a procedure.

Chapter 1

Introduction

Supermicro’s SC745 chassis series is optimized for the latest Intel Xeon processor and is also compatible with previous generation Intel and AMD single/dual processor-based motherboards. Utilizing redundant, high-efficiency power supplies (95+%) and eight hot-swap 3.5” drive bays, this chassis offers reliable performance with problem-free maintenance. Designed with 100% cooling redundancy using a combination of high-performance fans, the chassis minimizes the probability of system downtime or performance degradation from thermal-related issues. With seven tool-less PCIe expansion slots, and 6-pin power connectors supporting up to three high-end graphics cards, and it is quick to configure and easy to operate. Optionally, this tower can be converted to a 4U rack-mountable chassis in a standard rack.

1.1 Overview

This chapter provides a brief outline of the functions and features of the SC745 chassis. Models are listed below.

<table>
<thead>
<tr>
<th>Model</th>
<th>Drives</th>
<th>Fans</th>
<th>Power Supply</th>
</tr>
</thead>
<tbody>
<tr>
<td>SC745BAC-R1K28B2</td>
<td>8x SAS/SATA</td>

<td>920W Redundant (Platinum Level)</td>
</tr>
</tbody>
</table>

1.2 Unpacking the System

Inspect the box in which the chassis was shipped, and note if it was damaged. If any equipment appears damaged, file a damage claim with the carrier who delivered it.
## 1.3 System Features

The following table provides you with an overview of the main features of the SC745.

<table>
<thead>
<tr>

1.5 Where to Get Replacement Components

If you need replacement parts for your system, to ensure the highest level of professional service and technical support, purchase exclusively from our Supermicro Authorized Distributors/System Integrators/Resellers. A list can be found at: http://www.supermicro.com. Click the "Where to Buy" link.

1.6 Returning Merchandise for Service

A receipt or copy of your invoice marked with the date of purchase is required before any warranty service will be rendered. You can obtain service by calling your vendor for a Returned Merchandise Authorization (RMA) number. When returning to the manufacturer, the RMA number should be prominently displayed on the outside of the shipping carton, and mailed prepaid or hand-carried. Shipping and handling charges will be applied for all orders that must be mailed when service is complete.

For faster service, RMA authorizations may be requested online (http://www.supermicro.com/support/rma/).

Whenever possible, repack the chassis in the original Supermicro carton, using the original packaging material. If these are no longer available, be sure to pack the chassis securely, using packaging material to surround the chassis so that it does not shift within the carton and become damaged during shipping.

This warranty only covers normal consumer use and does not cover damages incurred in shipping or from failure due to the alteration, misuse, abuse or improper maintenance of products.

During the warranty period, contact your distributor first for any product problems.
2.1 Overview

This chapter provides instructions for preparing and mounting your chassis in a rack. By default, the chassis is shipped configured as a tower. The tower top cover and bottom feet must be removed to mount in a rack. Also, the control panel/drive module should be rotated 90 degrees.

Mounting rails are optional for this system. Be sure you have received the correct rail kit for your server.

2.2 Preparing for Rack Mounting

Choosing a Setup Location

- The system should be situated in a clean, dust-free area that is well ventilated. Avoid areas where heat, electrical noise and electromagnetic fields are generated.

- Leave at least 25 inches clearance in front of the rack to open the front door completely.

- Leave approximately 30 inches of clearance in the back of the rack to allow for sufficient airflow and access for servicing.

- It should be a restricted access location, such as a dedicated equipment room or a service closet.

- This product is not suitable for use with visual display workplace devices according to §2 of the German Ordinance for Work with Visual Display Units.

Rack Precautions

- Ensure that the leveling jacks on the bottom of the rack are extended to the floor so that the full weight of the rack rests on them.

- In single rack installations, stabilizers should be attached to the rack. In multiple rack installations, the racks should be coupled together.

- Always make sure the rack is stable before extending a server or other component from the rack.
• You should extend only one server or component at a time; extending two or more simultaneously may cause the rack to become unstable.

• When initially installing the server to a rack, test that the rail locking tabs engage to prevent the server from being overextended. Have a rack lift in place as a precaution in case the test fails.

**Server Precautions**

• Review the electrical and general safety precautions in Appendix B.

• Determine the placement of each component in the rack *before* you install the rails.

• Install the heaviest server components at the bottom of the rack first and then work your way up.

• Use a regulating uninterruptible power supply (UPS) to protect the server from power surges and voltage spikes and to keep your system operating in case of a power failure.

• Allow any drives and power supply modules to cool before touching them.

• When not servicing, always keep the front door of the rack and all covers/panels on the servers closed to maintain proper cooling.

**Rack Mounting Considerations**

**Ambient Operating Temperature**

If installed in a closed or multi-unit rack assembly, the ambient operating temperature of the rack environment may be greater than the room’s ambient temperature. Therefore, consideration should be given to installing the equipment in an environment compatible with the manufacturer’s maximum rated ambient temperature (TMRA).

**Airflow**

Equipment should be mounted into a rack so that the amount of airflow required for safe operation is not compromised.

**Mechanical Loading**

Equipment should be mounted into a rack so that a hazardous condition does not arise due to uneven mechanical loading.
**Circuit Overloading**
Consideration should be given to the connection of the equipment to the power supply circuitry and the effect that any possible overloading of circuits might have on overcurrent protection and power supply wiring. Appropriate consideration of equipment nameplate ratings should be used when addressing this concern.

**Reliable Ground**
A reliable ground must be maintained at all times. To ensure this, the rack itself should be grounded. Particular attention should be given to power supply connections other than the direct connections to the branch circuit (i.e. the use of power strips, etc.).

To prevent bodily injury when mounting or servicing this unit in a rack, you must take special precautions to ensure that the system remains stable. The following guidelines are provided to ensure your safety:

- This unit should be mounted at the bottom of the rack if it is the only unit in the rack.

- When mounting this unit in a partially filled rack, load the rack from the bottom to the top with the heaviest component at the bottom of the rack.

- If the rack is provided with stabilizing devices, install the stabilizers before mounting or servicing the unit in the rack.

- Slide rail mounted equipment is not to be used as a shelf or a work space.
2.3 Chassis Preparation

The chassis is shipped with the tower top cover and feet installed. Both must be removed for before installing the rails.

*Removing the Tower Top Cover*

1. Locate the chassis cover lock (blue lever) at the rear of the chassis cover.
2. Slide the chassis cover lock to the right and push chassis cover forward.
3. Lift the chassis top cover off the chassis.

*Figure 2-1. Remove Feet and Chassis Top Cover*

*Removing the Chassis Feet*

1. Place the chassis on its side.
2. Remove the screw holding a chassis foot in place.
3. The foot lock is a tab located in the center of the foot. It prevents the foot from sliding. Using a flat head screwdriver, gently lift the foot lock upward and slide the foot toward the rear of the chassis.
2.4 Installing the Rails

There are a variety of rack units on the market, which may require a slightly different assembly procedure. Do not use a two post "telco" type rack. This rail set fits a rack between 26" and 35.9" deep.

The following is a basic guideline for installing the system into a rack with the rack mounting hardware provided. You should also refer to the installation instructions that came with the specific rack you are using.

**Identifying the Rails**

The optional rackmount kit includes two rack rail assemblies, one for each side. Each of these assemblies consist of several sections: an inner fixed rail that secures to the chassis, an outer rack rail that secures to the rack, a middle rail that slides within the outer rail, and two brackets that attach the outer rail to the rack. The brackets are specific to the left and right side, and front and back, and labeled.

![Diagram](image.png)

**Figure 2-2. Identifying the Sections of the Rack Rails**

**Releasing the Inner Rails**

The inner rails must be removed from the outer rails to install onto the chassis. To remove the inner rail, pull it out as far as possible until it clicks to a stop. Depress the locking lever on the inner rail next to the middle rail to pull the inner rail completely out.
Installing the Inner Rails

Identify the left and right inner rails.

1. Attach the handles to the front sides of the chassis with three screws each.

2. Position the inner rails along the side of the chassis making sure the screw holes line up.

3. Screw the rail securely to the side of the chassis.

Warning: Do not pick up the server with the front handles. They are designed to pull the system from a rack only.
Assembling and Installing the Outer Rails

Each outer rail comes in three sections that require assembly before mounting onto the rack.

1. Find the outer rail mounting brackets in the chassis accessory box.
   - A pair of long brackets for the rear of each rail
   - A pair of short brackets for the front of each rail

   Note that the brackets are labeled as to front, rear, and up. They are specific for the left and right rails.

2. Secure the front (short) bracket onto the outer rail with M5 screws.

3. Mount the rear (long) bracket onto the outer rail at the approximate position to fit your rack.
   Use two or three M5 screws into holes that are convenient. Leave the screws just loose enough that the bracket can slide.

4. Install the outer rail assembly onto your rack. Adjust the outer rail to the exact depth of the rack by sliding the rear bracket. Then use screws and fasteners to secure the outer rail to the front and rear rack posts.

5. Further tighten the screws holding the rear bracket to the rail.
2.5 Installing the Server into the Rack

After attaching rails to both the chassis and the rack, slide the server into the rack.

1. Pull the middle rail out of the front of the outer rail and make sure that the ball bearing shuttle is locked at the front of the middle rail.

2. Align the rear of the inner (chassis) rails with the front of the outer (rack) rails and slide the inner rails into the outer rails until the server is completely in the rack.

3. Insert and tighten the thumbscrews that hold the front of the server to the rack.

![Figure 2-5. Installing the Server into a Rack](image)

**Note:** Figure is for illustrative purposes only. Always install servers to the bottom of a rack first.

**Warning:** Stability hazard. The rack stabilizing mechanism must be in place, or the rack must be bolted to the floor before you slide the unit out for servicing. Failure to stabilize the rack can cause the rack to tip over.

When initially installing the server to a rack, test that the rail locking tabs engage to prevent the server from being overextended. Have a rack lift in place as a precaution in case the test fails.
Chapter 2 Rack Mount Installation

Removing the Chassis from the Rack

Caution! It is dangerous for a single person to off-load the heavy chassis from the rack without assistance. Be sure to have sufficient assistance supporting the chassis when removing it from the rack. Use a lift.

1. Pull the chassis forward out the front of the rack until it stops.

2. Find the release lever on each side of the chassis on the inner rails. Release the chassis by simultaneously and lifting the left lever and pushing down the right lever. Continue to pull the chassis out of the rack.

Warning: In any instance of pulling the system from the rack, always use a rack lift and follow all associated safety precautions.

Slide rail mounted equipment is not to be used as a shelf or a work space.
2.6 Control Panel Orientation

The server can be configured for either tower or server rack orientation. It is shipped in tower mode and can be immediately used as desktop server. To use it in a rack, rotate the module that contains the control panel and the three drive trays (1 in Figure 2-6) 90 degrees.

Note that two of the 5.25" drives may be replaced by a mobile rack containing eight 2.5" storage drives.

![Figure 2-6. Chassis in Tower Mode](Default Configuration)

![Figure 2-7. Chassis in Rack Mount Mode]
**Rotating the Control Panel/Drive Module for Rack Mounting**

1. Power down the system and open the chassis cover.

2. Disconnect any cables from the back of the Control Panel/Drive Module.

3. Push the module release lever to unlock the module.

4. Grasp the edges of the module and pull it from the chassis.

5. Rotate the module 90 degrees so that the control panel is on top.

6. Reinsert the module into the chassis and reconnect the cables.

**Caution:** Use caution when working around the backplane. Do not touch the module backplane with any metal objects and make sure no ribbon cables touch the backplane or obstruct the holes, which aid in proper airflow.
Chapter 3

Maintenance and Component Installation

This chapter provides instructions on installing and replacing main system components. To assure compatibility, only use components that match the specifications or part numbers given. Installation or replacement of most components require that power first be removed from the system.

3.1 Removing Power

Use the following procedure to ensure that power has been removed from the system. This step is necessary when removing or installing non-hot-swap components.

1. Use the operating system to power down the system.

2. After the system has completely shut down, disconnect both the AC power cords from the power strip or outlet.

3. Disconnect the power cords from both the power supply modules.
3.2 Accessing the System

The chassis offers a removable side cover (top, if rack mounted) which allows access to the internal components.

**Removing the Side Cover**

1. Locate the latch on the cover, depress where it says "push," then lift the latch to release the cover.

2. Slide the cover to the rear and off.

![Figure 3-1. Removing the Chassis Cover](image-url)
3.3 Chassis Components

Storage Drives

The standard system provides hot-swap drive bays for eight 3.5" SATA drives covered by the front bezel. Alternatively, each bay can house a 2.5" SATA drive with an optional converter (pn MCP-220-00080-0B). The drive IDs for these bays are preconfigured as 0 through 7 from bottom to top.

The drives are hot-swappable, meaning they can be removed and replaced without powering down the system, if that capability is supported by your operating system. The drives are mounted in drive carriers to simplify their installation and removal from the chassis. The carriers also promote airflow for the system. For this reason, even carriers without drives must remain in the server.

There are several options that provide additional SAS or SATA storage drives if an optional SAS RAID controller card is purchased. Each 5.25" bay can house one 3.5" drive, or two 2.5" drives with a bracket. Or two 5.25" bays can be replaced by an optional enclosure called a mobile rack that houses eight hot-swap 2.5" drives. Additional cables are also required.

Note: Enterprise level hard disk drives are recommended for use in Supermicro chassis and servers. For information on recommended HDDs, visit the Supermicro website at http://www.supermicro.com/products/nfo/files/storage/SBB-HDDCompList.pdf.

Drive Indicators

Each hot-swap drive has two LED indicators: an activity indicator and a status indicator. In RAID configurations, the status indicator lights to indicate the status of the drive. In non-RAID configurations, the status indicator remains off. See the table below for details.

<table>
<thead>

Installing the Internal Drives

Removing a Hot-Swap Drive Carrier

1. Open the front bezel then push the release button located beside the drive LEDs.

2. Swing the handle fully out and then use it to pull the unit straight out.

Note: Your operating system must have RAID support to enable the hot-swap capability of the SATA drives.

Mounting a Drive in a Drive Carrier

The SATA drive carriers help to promote proper airflow for the system. For this reason, even carriers without SATA drives must remain in the chassis.

1. To add a new drive, install it into the carrier with the printed circuit board side facing down so that the mounting holes align with those in the carrier.

2. Secure the drive to the carrier with the screws provided, then push the carrier completely into the drive bay. You should hear a *click* when the drive is fully inserted. This indicates that the carrier has been fully seated and connected to the midplane, which automatically makes the power and logic connections to the hard drive.
Installing 2.5" Drive into the Converter Tray

The 2.5" drives feature a toolless installation method.

1. Fit one side of the drive against the release lever.

2. Press the other side of the drive down until it clicks into place.

![Figure 3-3. Mounting a 2.5" Drive into a Carrier](image)

Removing 2.5" Drive from the Converter Tray

1. Press down on the release tab untils the drive pops up from the tray.

2. Remove the 2.5" drive from the tray.

![Figure 3-4. Removing a 2.5" Drive from the Carrier](image)

Note: Enterprise level hard disk drives are recommended for use in Supermicro chassis and servers. For information on recommended HDDs, visit the Supermicro website at [http://www.supermicro.com/products/nfo/files/storage/SBB-HDDCompList.pdf](http://www.supermicro.com/products/nfo/files/storage/SBB-HDDCompList.pdf)
Removing the 2.5" Converter Bracket

1. Remove the screws from the drive carrier.

2. Remove the 2-in-1 converter bracket as shown below.

Installing a 3.5" Drive

1. Remove the screws from the drive carrier.

2. Install the 3.5" drive into the drive carrier and reinstall the screws.
Configuring the 5.25" Drive Bays
The control panel/drive module includes three 5.25" drive bays under the front control panel. It can be set up in a variety of configurations to suit the user's needs.

- Up to three 5.25" peripheral drives, such as a DVD drive
- One or two additional fixed SATA, SAS or solid state drives in a single tray
- A mobile rack with eight additional 2.5" hot-swap hard drives (replaces two 5.25" bays; requires an optional expansion card and cables)
- A combination of the above

Accessing the 5.25" Trays
1. Open the chassis cover.
2. Locate the drive tray and pull the appropriate release tab.
3. Push the drive tray out of the front of the chassis.

Figure 3-7. Removing a Drive Tray
**Installing a Storage Drive into a 5.25" Tray**

One 3.5" drive, or two 2.5" drives with an optional bracket (pn MCP-220-00044-0N) can be installed. An optional expansion card and cables are also required.

1. Remove the tray from the drive bay.

2. For a 3.5" drive, place the drive in the drive tray, and secure the drive to the tray with four screws from the bottom.

   For one or two 2.5" drives, install the drives into the special purpose bracket, then secure the bracket to drive tray with screws through the bottom of the tray.

3. Slide the drive tray into the chassis until the tray clicks into place.

4. Connect the data and power cables for the new drive.

5. Replace the chassis cover and power up the system.
Installing a 5.25" Peripheral Device

An optional peripheral device such as a DVD drive can be installed in a 5.25" bay.

1. Remove the tray from the drive bay.

2. Re-use the side rails from the tray and install them onto the peripheral device.

3. Insert the new device in the slot until the tab locks in place.

4. Connect the data and power cables.

5. Replace the chassis cover and power up the system.
Additional Storage Drives in a Mobile Rack

The chassis accepts a Supermicro mobile rack (pn CSE-M28SABP) in place of two 5.25" bays. This adds eight hot-swap 2.5" SAS or SATA drives. An optional expansion card and cables are also required.

![Mobile Rack](image)

Figure 3-10. Chassis with a Mobile Rack Installed

Installing the Mobile Rack

1. Remove two adjacent trays from the drive bays.

2. Remove the drive tray rails.
3. Install a drive tray rail onto each side of the mobile rack. Make sure the arrow on the rail points toward the front of the chassis.

4. Slide the mobile rack into the chassis.

5. Connect the data and power cables.
Installing Expansion Cards

The system can accommodate six PCIe cards. The chassis has seven slots, but the slot nearest the chassis top is not supported by this motherboard.

![Figure 3-12. PCI Slots](image)

*Installing an Expansion Card*

1. Power down the system and remove the cover.

2. In the rear of the chassis, push on PCI shield lock, then lift the lock.

3. Remove the screw holding the PCI shield in place and remove the shield.

4. Push the expansion card into the expansion slot on the motherboard while aligning it with the chassis slot in the rear of the chassis.

5. Secure the expansion card shield onto the rear of the chassis with a screw and the lock.

![Figure 3-13. Removing a Blank PCI Shield](image)
System Cooling

Three 8-cm fans located in the center of the chassis provide cooling airflow while two 8-cm exhaust fans at the rear of the chassis expel hot air. (The -SQ models have two 8-cm fans and one 9-cm fan.) The chassis is also fitted with an air shroud to concentrate the flow of cooling air over the areas of highest generated heat. The fans should all be connected to headers on the motherboard. Each power supply module also has a cooling fan.

Chassis Fans

Under normal operation, all three chassis fans and both exhaust fans run continuously. They can be replaced without powering down the system (hot-swap).

Replacing Chassis Cooling Fans

1. Depress the locking tab on the failed fan.
   - On a mid-chassis fan, push the tab on the side of the housing inward.
   - On an exhaust fan, push down on the colored tab.

2. With the tab depressed, pull the unit straight out.

3. Replace the failed fan, noting the air flow direction. It should click into place. Check that the fan is working before replacing the chassis cover.

Figure 3-14. Removing a Chassis Fan
**Air Shroud**

Air shrouds concentrate airflow to maximize fan efficiency. It covers the processors and heatsinks.

*Installing the Air Shroud*

The air shroud fits behind the two fans closest to the power supply. Align the pins and press the air shroud into the chassis. It should click into place.

![Figure 3-15. Installing the Air Shroud](image)

To remove the air shroud, press the release tabs at the front and rear of the shroud to unlock it, the lift it out.
Power Supply
The system has a redundant power supply consisting of two power modules. Each power supply module has an auto-switching capability, which enables it to automatically sense and operate at a 100 V – 240 V input voltage.

If either of the two power supply modules fail, the other module will take the full load and allow the system to continue operation without interruption. The PWR Fail LED will illuminate and remain on until the failed unit has been replaced. The hot-swap capability of the power supply modules allows you to replace the failed module without powering down the system. Replacement units can be ordered directly from Supermicro (see contact information in the Preface).

Power Supply LEDs
On the rear of the power supply module, an LED displays the status.

- **Solid Green**: When illuminated, indicates that the power supply is on.

- **Solid Amber**: When illuminated, indicates the power supply is plugged in and turned off, or the system is off but in an abnormal state.

- **Blinking Amber**: When blinking, this system power supply temperature has reached 63C. The system will automatically power-down when the power supply temperature reaches 70C and restart when the power supply temperature goes below 60C.
**Replacing the Power Supply**

You do not need to shut down the system to replace a power supply module.

1. Unplug the AC power cord from the failed power supply module.

2. Push the release tab on the power module to the side to unlock it then grasp the handle to pull it from the chassis.

3. Replace the failed module with another unit of the same model.

4. Push the new module all the way into the open bay until the release tab clicks into a locked position.

5. Plug the AC power cord back into the newly installed power module.

**Removing the Front Bezel**

If you wish to remove the front bezel, push on the three tabs on the inside of the left lip of the front chassis cover. Then slightly swing out the same (left) side of the cover, about ½ inch only. Remove by pushing on the open side of the cover to remove it from the chassis (do not try to swing or pull it straight out after opening the left side).
Appendix A

Power Supply Specifications

This appendix lists power supply specifications for your chassis system.

Appendix B

Standardized Warning Statements for AC Systems

About Standardized Warning Statements

The following statements are industry standard warnings, provided to warn the user of situations which have the potential for bodily injury. Should you have questions or experience difficulty, contact Supermicro's Technical Support department for assistance. Only certified technicians should attempt to install or configure components.

Read this appendix in its entirety before installing or configuring components in the Supermicro chassis.

These warnings may also be found on our website at http://www.supermicro.com/about/policies/safety_information.cfm.

Warning Definition

Warning! This warning symbol means danger. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents.

警告の定義
この警告サインは危険を意味します。人事故につながる可能性がありますので、いずれの機器でも動作させる前に、電気回路に含まれる危険性に注意して、標準的な事故防止策に精通して下さい。

此警告符号代表危险。您正处在一个可能导致严重伤害的工作环境中。在您使用设备开始工作之前，必须充分意识到触电的危险，并熟练掌握防止事故发生的标准工作程序。请根据每项警告结尾的声明号码找到该设备的安全性警告说明的翻译文本。

Warning! This warning symbol means danger. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents.

INSTRUCCIONES IMPORTANTES DE SEGURIDAD

Este símbolo de aviso indica peligro. Existe riesgo para su integridad física. Antes de manipular cualquier equipo, considere los riesgos de la corriente eléctrica y familiarícese con los procedimientos estándar de prevención de accidentes. Al final de cada advertencia encontrará el número que le ayudará a encontrar el texto traducido en el apartado de traducciones que acompaña a este dispositivo.

GUARDE ESTAS INSTRUCCIONES.

IMPORTANTES INFORMATIONS DE SÉCURITÉ

Ce symbole d'avertissement indique un danger. Vous vous trouvez dans une situation pouvant entraîner des blessures ou des dommages corporels. Avant de travailler sur un équipement, soyez conscient des dangers liés aux circuits électriques et familiarisez-vous avec les procédures couramment utilisées pour éviter les accidents. Pour prendre connaissance des traductions des avertissements figurant dans les consignes de sécurité traduites qui accompagnent cet appareil, référez-vous au numéro de l'instruction situé à la fin de chaque avertissement.

CONSERVEZ CES INFORMATIONS.

תถอน החזרות אנורדה

הצוהות הבאות הן אזהרות על פי תקיני התעשייה, על מנת להזהיר את המשתמש מפני חבלה פיזית אפשרית. במידה ויש שאלות או היתקלות בבעיה כלשהי, יש ליצור קשר עם מחלקת תמיכה טכנית של סופרמיקרו. טכנאים מוסמכים בלבד רשאים להתקין או להגדיר את הרכיבים.

יש לקרוא את הנספח במלואו לפני התקנת או הגדרת הרכיבים במארזי סופרמיקרו.
Installation Instructions

Warning! Read the installation instructions before connecting the system to the power source.
Appendix B: Standardized Warning Statements

Warnung
Vor dem Anschließen des Systems an die Stromquelle die Installationsanweisungen lesen.

¡Advertencia!
Lea las instrucciones de instalación antes de conectar el sistema a la red de alimentación.

Attention
Avant de brancher le système sur la source d'alimentation, consulter les directives d'installation.

-know that the protective device is rated not greater than: 250 V, 20 A.

Warning! This product relies on the building's installation for short-circuit (overcurrent) protection. Ensure that the protective device is rated not greater than: 250 V, 20 A.
Warnung

¡Advertencia!
Este equipo utiliza el sistema de protección contra cortocircuitos (o sobrecorrientes) del edificio. Asegúrese de que el dispositivo de protección no sea superior a: 250 V, 20 A.

Attention
Pour ce qui est de la protection contre les courts-circuits (surtension), ce produit dépend de l'installation électrique du local. Vérifiez que le courant nominal du dispositif de protection n'est pas supérieur à :250 V, 20 A.

경고!
이 제품은 전원의 단락(과전류)방지에 대해서 전적으로 건물의 관련 설비에 의존합니다. 보호장치의 정격이 반드시 250V(볼트), 20A(암페어)를 초과하지 않도록 해야 합니다.

Waarschuwing
Dit product is afhankelijk van de korte sluitbeveiliging (overspanning) van uw electrische installatie. Controleer of het beveiligde apparaat niet groter gedimensioneerd is dan 250V, 20A.
Power Disconnection Warning

**Warning!** The system must be disconnected from all sources of power and the power cord removed from the power supply module(s) before accessing the chassis interior to install or remove system components.
Waarschuwing
Voordat u toegang neemt tot het binnenwerk van de behuizing voor het installeren of verwijderen van systeem onderdelen, dient u alle spanningsbronnen en alle stroomkabels aangesloten op de voeding(en) van de behuizing te verwijderen.

**Equipment Installation**

**Warning!** Only trained and qualified personnel should be allowed to install, replace, or service this equipment.

¡Advertencia! Solamente el personal calificado debe instalar, reemplazar o utilizar este equipo.
Appendix B: Standardized Warning Statements

Attention
Il est vivement recommandé de confier l'installation, le remplacement et la maintenance de ces équipements à des personnels qualifiés et expérimentés.

경고!
훈련을 받고 공인된 기술자만이 이 장비의 설치, 교체 또는 서비스를 수행할 수 있습니다.

Waarschuwing
Deze apparatuur mag alleen worden geïnstalleerd, vervangen of hersteld door geschoold en gekwalificeerd personeel.

**Restricted Area**

*Warning!* This unit is intended for installation in restricted access areas. A restricted access area can be accessed only through the use of a special tool, lock and key, or other means of security. (This warning does not apply to workstations).

アクセセ制限区域
このユニットは、アクセス制限区域内に設置されることを想定しています。

アクセス制限区域は、特別なツール、鍵と錠前、その他のセキュリティの手段を用いてのみ出入りが可能です。

警告
此部件应安装在限制进出的场所，限制进出的场所指只能通过使用特殊工具、锁和钥匙或其它安全手段进出的场所。

警告
此装置仅限安装於进出管制区域，进出管制区域係指僅能以特殊工具、鎖頭及鑰匙或其他安全方式才能進入的區域。
Warnung
Diese Einheit ist zur Installation in Bereichen mit beschränktem Zutritt vorgesehen. Der Zutritt zu derartigen Bereichen ist nur mit einem Spezialwerkzeug, Schloss und Schlüssel oder einer sonstigen Sicherheitsvorkehrung möglich.

¡Advertencia!
Esta unidad ha sido diseñada para instalación en áreas de acceso restringido. Sólo puede obtenerse acceso a una de estas áreas mediante la utilización de una herramienta especial, cerradura con llave u otro medio de seguridad.

Attention
Cet appareil doit être installée dans des zones d'accès réservés. L'accès à une zone d'accès réservé n'est possible qu'en utilisant un outil spécial, un mécanisme de verrouillage et une clé, ou tout autre moyen de sécurité.

경고!
이 장치는 접근이 제한된 구역에 설치하도록 되어있습니다. 특수도구, 잠금 장치 및 키, 또는 기타 보안 수단을 통해서만 접근 제한 구역에 들어갈 수 있습니다.

Waarschuwing
Dit apparaat is bedoeld voor installatie in gebieden met een beperkte toegang. Toegang tot dergelijke gebieden kunnen alleen verkregen worden door gebruik te maken van speciaal gereedschap, slot en sleutel of andere veiligheidsmaatregelen.
Battery Handling

**Warning!** There is the danger of explosion if the battery is replaced incorrectly. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.
Warning! This unit might have more than one power supply connection. All connections must be removed to de-energize the unit.

冗長電源装置
このユニットは複数の電源装置が接続されている場合があります。
ユニットの電源を切るためには、すべての接続を取り外さなければならないです。

警告
此部件连接的电源可能不止一个，必须将所有电源断开才能停止给该部件供电。

危险
此装置连接的电源可能不止一个，必须切断所有电源才能停止对该装置的供电。

Warnung
Dieses Gerät kann mehr als eine Stromzufuhr haben. Um sicherzustellen, dass der Einheit kein Strom zugeführt wird, müssen alle Verbindungen entfernt werden.
Appendix B: Standardized Warning Statements

¡Advertencia!
Puede que esta unidad tenga más de una conexión para fuentes de alimentación. Para cortar por completo el suministro de energía, deben desconectarse todas las conexiones.

Attention
Cette unité peut avoir plus d’une connexion d’alimentation. Pour supprimer toute tension et tout courant électrique de l’unité, toutes les connexions d’alimentation doivent être débranchées.

 경고!
이 장치에는 한 개 이상의 전원 공급 단자가 연결되어 있을 수 있습니다. 이 장치에 전원을 차단하기 위해서는 모든 연결 단자를 제거해야만 합니다.

Waarschuwing
Deze eenheid kan meer dan één stroomtoevoeraansluiting bevatten. Alle aansluitingen dienen verwijderd te worden om het apparaat stroomloos te maken.
Backplane Voltage

Warning! Hazardous voltage or energy is present on the backplane when the system is operating. Use caution when servicing.

バックプレーンの電圧
システムの稼働中は危険な電圧または電力が、バックプレーン上にかかっています。
修理する際には注意ください。

警告
当系统正在进行时，背板上有很危险的电压或能量，进行维修时务必小心。

警告
當系統正在進行時，背板上有危險的電壓或能量，進行維修時務必小心。

Warnung
Wenn das System in Betrieb ist, treten auf der Rückwandplatine gefährliche Spannungen oder Energien auf. Vorsicht bei der Wartung.

¡Advertencia!
Cuando el sistema está en funcionamiento, el voltaje del plano trasero es peligroso. Tenga cuidado cuando lo revise.

Attention
Lorsque le système est en fonctionnement, des tensions électriques circulent sur le fond de panier. Prendre des précautions lors de la maintenance.

 compartir la información sobre el voltaje del plano trasero.

Appendix B: Standardized Warning Statements

Comply with Local and National Electrical Codes

**Warning!** Installation of the equipment must comply with local and national electrical codes.

警告
設備安装必须符合本地与本国电气法规。

警告
設備安裝必須符合本地與本國電氣法規。

Warnung
Die Installation der Geräte muss den Sicherheitsstandards entsprechen.

¡Advertencia!
La instalacion del equipo debe cumplir con las normas de electricidad locales y nacionales.

Attention
L’équipement doit être installé conformément aux normes électriques nationales et locales.
Warning! Ultimate disposal of this product should be handled according to all national laws and regulations.

製品の廃棄
この製品を廃棄処分する場合、国の関係する全ての法律・条例に従い処理する必要があります。

警告
本产品的废弃处理应根据所有国家的法律和规章进行。

警告
本產品的廢棄處理應根據所有國家的法律和規章進行。

Warnung
Die Entsorgung dieses Produkts sollte gemäß allen Bestimmungen und Gesetzen des Landes erfolgen.

¡Advertencia!
Al deshacerse por completo de este producto debe seguir todas las leyes y reglamentos nacionales.
Attention
La mise au rebut ou le recyclage de ce produit sont généralement soumis à des lois et/ou directives de respect de l'environnement. Renseignez-vous auprès de l'organisme compétent.

Warning!
Hazardous moving parts. Keep away from moving fan blades. The fans might still be turning when you remove the fan assembly from the chassis. Keep fingers, screwdrivers, and other objects away from the openings in the fan assembly's housing.

Hot Swap Fan Warning

警告! 回転部に注意。運転中は回転部(羽根)に触れていけないでください。シャーシから冷却ファン装置を取り外した際、ファンがまだ回転している可能性があります。ファンの開口部に、指、ドライバー、およびその他のものを近づけないで下さい。

警告！危险的可移动性零件。请务必与转动的风扇叶片保持距离。当您从机架移除风扇装置，风扇可能仍在转动。小心不要将手指、螺丝起子和其他物品太靠近风扇。
Warnung

¡Advertencia!

Riesgo de piezas móviles. Mantener alejado de las aspas del ventilador. Los ventiladores podran dar vuelta cuando usted quite ell montaje del ventilador del chasis. Mandtenga los dedos, los destornilladores y todos los objetos lejos de las aberturas del ventilador.

Attention

Pieces mobiles dangereuses. Se tenir à l'ecart des lames du ventilateur Il est possible que les ventilateurs soient toujours en rotation lorsque vous retirerez le bloc ventilateur du châssis. Prenez garde à ce que doigts, tournevis et autres objets soient éloignés du logement du bloc ventilateur.

경고!

움직이는 위험한 부품. 회전하는 송풍 날개에 접근하지 마세요. 섀시로부터 팬 조립품을 제거할 때 팬은 여전히 회전하고 있을 수 있습니다. 팬 조립품 외관의 열려있는 부분들로부터 손가락 및 스크류드라이버, 다른 물체들이 가까이 하지 않도록 배치해 주십시오.

Waarschuwing

Gevaarlijk bewegende onderdelen. Houd voldoende afstand tot de bewegende ventilatorbladen. Het is mogelijk dat de ventilator nog draait tijdens het verwijderen van het ventilatorsamenstel uit het chassis. Houd uw vingers, schoevelendraaiers en eventuele andere voorwerpen uit de buurt van de openingen in de ventilatorbehuizing.
Appendix B: Standardized Warning Statements

**Power Cable and AC Adapter**

**Warning!** When installing the product, use the provided or designated connection cables, power cables and AC adaptors. Using any other cables and adaptors could cause a malfunction or a fire. Electrical Appliance and Material Safety Law prohibits the use of UL or CSA-certified cables (that have UL/CSA shown on the cord) for any other electrical devices than products designated by Supermicro only.

電源コードとACアダプター

製品を設置する場合、提供または指定および購入された接続ケーブル、電源コードとACアダプターを該当する地域の条例や安全基準に適合するコードサイズやプラグと共に使用下さい。他のケーブルやアダプタを使用すると故障や火災の原因になることがあります。

電気用品安全法は、ULまたはCSA認定のケーブル(UL/CSAマークがコードに表記)をSupermicroが指定する製品以外に使用することを禁止しています。

警告

安裝此产品時,請使用本身提供的或指定的或採購的連接線,電源線和電源適配器．包含遵照當地法規和安全要求的合規的電源線尺寸和插頭．使用其它線材或適配器可能會引起故障或火災．除了Supermicro所指定的產品,電氣用品和材料安全法律規定禁止使用未经UL或CSA认证的线材．(線材上會顯示UL/CSA符號)。

警告

安裝此產品時,請使用本身提供的或指定的或採購的連接線,電源線和電源適配器．包含遵照當地法規和安全要求的合規的電源線尺寸和插頭．使用其它線材或適配器可能會引起故障或火災．除了Supermicro所指定的產品,電氣用品和材料安全法律規定禁止使用未經UL或CSA認證的線材．(線材上會顯示UL/CSA符號)。

Warnung

Nutzen Sie beim Installieren des Produkts ausschließlich die von uns zur Verfügung gestellten Verbindungskabeln, Stromkabeln und/oder Adapter, die Ihre örtlichen Sicherheitsstandards einhalten. Der Gebrauch von anderen Kabeln und Adapter können Fehlfunktionen oder Feuer verursachen. Die Richtlinien untersagen das Nutzen von UL oder CAS zertifizierten Kabeln (mit UL/CSA gekennzeichnet), an Geräten oder Produkten die nicht mit Supermicro gekennzeichnet sind.
¡Advertencia!
Cuando instale el producto, utilice la conexión provista o designada o procure cables, Cables de alimentación y adaptadores de CA que cumplan con los códigos locales y los requisitos de seguridad, incluyendo el tamaño adecuado del cable y el enchufe. El uso de otros cables y adaptadores podría causar un mal funcionamiento o un incendio. La Ley de Seguridad de Aparatos Eléctricos y de Materiales prohíbe El uso de cables certificados por UL o CSA (que tienen el certificado UL / CSA en el código) para cualquier otros dispositivos eléctricos que los productos designados únicamente por Supermicro.

Attention
Lors de l'installation du produit, utilisez les cables de connection fournis ou désigné ou achetez des cables, cables de puissance et adaptateurs respectant les normes locales et les conditions de securite y compris les tailles de cables et les prises electriques appropries. L'utilisation d'autres cables et adaptateurs peut provoquer un dysfonctionnement ou un incendie. Appareils électroménagers et la Loi sur la Sécurité Matériel interdit l'utilisation de câbles certified- UL ou CSA (qui ont UL ou CSA indiqué sur le code) pour tous les autres appareils électriques sauf les produits désignés par Supermicro seulement.

Appendix C

BPN-SAS-743TQ Backplane Specifications

This appendix provides details about the BPN-SAS-743TQ backplane.

C-1 Safety Guidelines

ESD Safety Guidelines

Electrostatic Discharge (ESD) can damage electronic components. To prevent damage to your system, it is important to handle it very carefully. The following measures are generally sufficient to protect your equipment from ESD.

• Use a grounded wrist strap designed to prevent static discharge.

• Touch a grounded metal object before removing a component from the antistatic bag.

• Handle the backplane by its edges only; do not touch its components, peripheral chips, memory modules or gold contacts.

• When handling chips or modules, avoid touching their pins.

• Put the backplane and peripherals back into their antistatic bags when not in use.

General Safety Guidelines

• Always disconnect power cables before installing or removing any components from the computer, including the backplane.

• Disconnect the power cable before installing or removing any cables from the backplane.

• Make sure that the backplane is securely and properly installed on the motherboard to prevent damage to the system due to power shortage.

C-2 Version Information

This manual reflects BPN-SAS-743TQ, Revision 3.00, the most current release available at the time of publication. Refer to the Supermicro Web site at www.supermicro.com for the latest updates, compatible parts and supported configurations.

All images and layouts shown in this guide are based upon the latest PCB revision available at the time of publishing. Your backplane may or may not look exactly the same.
C-3 Rear Connectors, Jumpers, and Indicators

Rear Connector Locations
The following connectors are on the side of the backplane that faces the rear of the chassis. They are identified by silkscreen labels.

1. JTAG Connector: JP47
2. Upgrade Connector: JP46
3. Chip: MG9072
5. ACT IN: JP26
6. Sideband Connector #2 JP52
7. Sideband Connector #1 JP51
8. I^C Connector #2 JP45
9. I^C Connector #1 JP44
10. SAS Port #0 J5
11. SAS Port #1 J6
12. SAS Port #2 J7
13. SAS Port #3 J8
14. SAS Port #4 J10
15. SAS Port #5 J12
16. SAS Port #6 J14
17. SAS Port #7 J16
Rear Connectors and Pin Definitions

#1. and #2. JTAG Connector and Upgrade Connectors
The JTAG and Upgrade connectors, designated JP47 and JP46, are used for diagnostic purposes. These connectors should be used by a certified and experienced technician.

#3. MG9072 Chip
The MG9072 is an enclosure management chip that supports the SES-2 controller and SES-2 protocols.

#4. Backplane Main Power Connectors
The 4-pin connectors, designated JP10 and JP13, provide power to the backplane. See the table on the right for pin definitions.

#5. Activity LED Header
The activity LED header, designated JP26, is used to indicate the activity status of each SAS drive. The Activity LED Header is located on the front panel. For the Activity LED Header to work properly, connect using a 10-pin LED cable.

#6. and #7. Sideband Headers
The sideband headers are designated JP51 and JP52. For SES-2 to work properly, you must connect an 10-pin sideband cable. See the table to the right for pin definitions.

#8. and #9. I²C Connectors
The I²C Connectors, designated JP44 and JP45, are used to monitor HDD activity and status. See the table on the right for pin definitions.

#10. to #17. SAS Ports
The SAS ports are used to connect the SAS drive cables. The eight ports are designated #0 – #7. Each port is also compatible with SATA drives. However, do not mix SAS and SATA drives in the same enclosure.
**SAS Port Connections in I²C and SGPIO Settings**

Use the following chart when connecting this backplane. If you connect the SAS ports out of order, you will not able to easily identify drives using the LED function.

<table>
<thead>
<tr>
<th>Port #</th>
<th>I²C</th>
<th>SGPIO</th>
</tr>

</tbody>
</table>

**Rear Jumpers and Pin Definitions**

![Rear Jumpers Diagram](image-url)

Figure C-2. Rear Jumpers
Appendix C: BPN-SAS-743TQ Backplane Specifications

Explanation of Jumpers
To modify the operation of the backplane, jumpers can be used to choose between optional settings. Jumpers create shorts between two pins to change the function of the connector. Pin 1 is identified with a square solder pad on the printed circuit board.

Note: On two pin jumpers, "Closed" means the jumper is on and "Open" means the jumper is off the pins.

*The buzzer sound indicates that a condition requiring immediate attention has occurred. The buzzer alarm is triggered by the following conditions: hard drive failure, fan failure, or system temperature over 45º Celsius.

\[I^2C\] and SGPIO Mode Jumper Settings
This backplane can utilize \[I^2C\] or SGPIO. \[I^2C\] is the default mode and can be used without making changes to your jumpers. The following information details which jumpers must be configured to use SGPIO mode or restore your backplane to \[I^2C\] mode.

Appendix D

BPN-SAS3-743A Backplane Specifications

This appendix provides details about the BPN-SAS3-743A backplane.

D-1 Safety Guidelines

**ESD Safety Guidelines**

Electrostatic Discharge (ESD) can damage electronic components. To prevent damage to your system, it is important to handle it very carefully. The following measures are generally sufficient to protect your equipment from ESD.

- Use a grounded wrist strap designed to prevent static discharge.

- Touch a grounded metal object before removing a component from the antistatic bag.

- Handle the backplane by its edges only; do not touch its components, peripheral chips, memory modules or gold contacts.

- When handling chips or modules, avoid touching their pins.

- Put the backplane and peripherals back into their antistatic bags when not in use.

**General Safety Guidelines**

- Always disconnect power cables before installing or removing any components from the computer, including the backplane.

- Disconnect the power cable before installing or removing any cables from the backplane.

- Make sure that the backplane is securely and properly installed on the motherboard to prevent damage to the system due to power shortage.

D-2 Version Information

This manual reflects BPN-SAS3-743A, Revision 1.00, the most current release available at the time of publication. Refer to the Supermicro Web site at www.supermicro.com for the latest updates, compatible parts and supported configurations.

All images and layouts shown in this guide are based upon the latest PCB revision available at the time of publishing. Your backplane may or may not look exactly the same.
D-3 Rear Connectors, Jumpers, and Indicators

Rear Connector Locations
The following connectors are on the side of the backplane that faces the rear of the chassis. They are identified by silkscreen labels.

1. Chip: CPLD
2. JTAG Connector: J16
3. SAS3 Port #1: JSM1
4. SAS3 Port #0: JSM0
5. Power Connector (4-pin) #3: JPW3
6. Power Connector (4-pin) #2: JPW2
7. Power Connector (4-pin) #1: JPW1

Figure D-1. Rear Connectors
Rear Connectors and Pin Definitions

#1. CPLD Chip
The CPLD is an enclosure management chip that supports the SGPIO and LED management.

#2. JTAG Connector
The JTAG connector, designated J16, is used for diagnostic purposes. This connector should not be used as it is for internal testing only.

#3. – 4. SAS3 Ports
The SAS3 ports are used to connect the SAS3 drive cables. The 2 ports are designated JSM0, for drives at SAS #0-#3, and JSM1, for drives at SAS #4-#7 (see section 2-4 for SAS drive locations). Each port is also compatible with SATA drives. However, mixing SAS3 and SATA drives in the same enclosure is not recommended.

#5. – #7. Backplane Main Power Connectors
The 4-pin connectors, designated JPW1, JPW2, and JPW3, provide power to the backplane. See the table on the right for pin definitions.

<table>
