USER'S MANUAL

Revision 1.0

The information in this user's manual has been carefully reviewed and is believed to be accurate. The manufacturer assumes no responsibility for any inaccuracies that may be contained in this document, and makes no commitment to update or to keep current the information in this manual, or to notify any person or organization of the updates. **Please Note: For the most up-to-date version of this manual, please see our website at www.supermicro.com.**

Super Micro Computer, Inc. ("Supermicro") reserves the right to make changes to the product described in this manual at any time and without notice. This product, including software and documentation, is the property of Supermicro and/or its licensors, and is supplied only under a license. Any use or reproduction of this product is not allowed, except as expressly permitted by the terms of said license.

IN NO EVENT WILL SUPER MICRO COMPUTER, INC. BE LIABLE FOR DIRECT, INDIRECT, SPECIAL, INCIDENTAL, SPECULATIVE, OR CONSEQUENTIAL DAMAGES ARISING FROM THE USE OR INABILITY TO USE THIS PRODUCT OR DOCUMENTATION EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. IN PARTICULAR, SUPER MICRO COMPUTER, INC. SHALL NOT HAVE LIABILITY FOR ANY HARDWARE, SOFTWARE, OR DATA STORED OR USED WITH THE PRODUCT, INCLUDING THE COSTS OF REPAIRING, REPLACING, INTEGRATING, INSTALLING OR RECOVERING SUCH HARDWARE, SOFTWARE, OR DATA.

Any disputes arising between manufacturer and customer shall be governed by the laws of Santa Clara County in the State of California, USA. The State of California, County of Santa Clara shall be the exclusive venue for the resolution of any such disputes. Supermicro's total liability for all claims will not exceed the price paid for the hardware product.

FCC Statement: This equipment has been tested and found to comply with the limits for a Class A digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in an industrial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the manufacturer's instruction manual, may cause harmful interference with radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case you will be required to correct the interference at your own expense.

California Best Management Practices Regulations for Perchlorate Materials: This Perchlorate warning applies only to products containing CR (Manganese Dioxide) Lithium coin cells. "Perchlorate Material-special handling may apply. See www.dtsc.ca.gov/hazardouswaste/perchlorate".

The products sold by Supermicro are not intended for and will not be used in life support systems, medical equipment, nuclear facilities or systems, aircraft, aircraft devices, aircraft/emergency communication devices or other critical systems whose failure to perform be reasonably expected to result in significant injury or loss of life or catastrophic property damage. Accordingly, Supermicro disclaims any and all liability, and should buyer use or sell such products for use in such ultra-hazardous applications, it does so entirely at its own risk. Furthermore, buyer agrees to fully indemnify, defend and hold Supermicro harmless for and against any and all claims, demands, actions, litigation, and proceedings of any kind arising out of or related to such ultra-hazardous use or sale.

Manual Revision 1.0

Preface

About This Manual

This manual is written for system integrators, IT technicians and knowledgeable end users. It provides information for the installation and use of the B12DPT-6 motherboard.

About This Motherboard

The Supermicro B12DPT-6 supports dual 3rd Gen Intel® Xeon® Scalable Processors (in Socket P4) with up to 38 CPU cores and a thermal design power (TDP) of up to 270W. Built with the Intel C621A chipset, the B12DPT-6 supports up to 4TB of 3DS LRDIMM/ LRDIMM/3DS RDIMM/RDIMM DDR4 ECC memory with speeds of 3200/2933/2666MHz in 16 DIMMs and up to 4TB of Intel® Optane™ PMem 200 Series with speeds of up to 3200MHz. (See the notes below). This motherboard features superior IO capability, including two mezzanine connectors and two HDD slots that support two PCIe Gen 4 slots and SATA 6G/NVMe/SAS3 (-SC2) connections. It also offers the most advanced data protection feature that encompasses TPM (Trusted Platform Module) and RoT (Root of Trust) support. The B12DPT-6 is optimized for high performance computing, high-density blade servers and is ideal for 4U and 8U SuperBlade Enterprise applications. Please note that this motherboard is intended to be installed and serviced by professional technicians only. For processor/memory updates, please refer to our website at <http://www.supermicro.com/products/>.

Note 1: Intel® Optane™ PMem 200 Series is supported by the 3rd Gen. Intel Xeon Scalable Processors (83xx/63xx/53xx/4315) Series only

Note 2: Memory speed support is dependent on the processors used in the system.

Conventions Used in the Manual

Special attention should be given to the following symbols for proper installation and to prevent damage done to the components or injury to yourself:

Important: Important information given to ensure proper system installation or to relay safety precautions.

Warning! Indicates important information given to prevent equipment/property damage or personal injury.

Warning! Indicates high voltage may be encountered while performing a procedure.

Note: Additional Information given to differentiate various models or to provide information for proper system setup.

Chapter 1

Introduction

Congratulations on purchasing your computer motherboard from an industry leader. Supermicro motherboards are designed to provide you with the highest standards in quality and performance.

1.1 Shipping Package

This motherboard is intended to be used in an SMCI-proprietary chassis as a part of an integral system solution. It will not be sold as an independent, standard product. There will be no shipping package included in the shipment.

Important Links

For your motherboard to work properly, please follow the links below to download all necessary drivers/utilities and the user's manual for your server.

- Supermicro product manuals: <http://www.supermicro.com/support/manuals/>
- Product drivers and utilities: <https://www.supermicro.com/wftp/driver>
- Product safety info: http://www.supermicro.com/about/policies/safety_information.cfm
- A secure data deletion tool designed to fully erase all data from storage devices can be found at our website: https://www.supermicro.com/about/policies/disclaimer.cfm?url=/wftp/utility/Lot9_Secure_Data_Deletion_Utility/
- If you have any questions, please contact our support team at: support@supermicro.com

This manual may be periodically updated without notice. Please check the Supermicro website for possible updates to the manual revision level.

B12DPT-6 Motherboard Image

 **Note:** All graphics shown in this manual were based upon the latest PCB revision available at the time of publication of the manual. The motherboard you received may or may not look exactly the same as the graphics shown in this manual.

B12DPT-6 Motherboard Layout
(not drawn to scale)

 **Note:** Components not documented are for internal testing only.

Quick Reference

Notes:

- See [Chapter 2](#) for detailed information on jumpers, I/O ports, and JF1 front panel connections.
- "■" indicates the location of Pin 1.
- Jumpers/LED indicators not indicated are used for testing only.
- Use only the correct type of onboard CMOS battery as specified by the manufacturer. Do not install the onboard battery upside down to avoid possible explosion.

Quick Reference Table

Jumper	Description	Default Setting
JBT1	CMOS Clear	Open (Normal)
JPME1	ME Manufacturing Recovery	Pins 1-2 (Normal)

Onboard LED Indicator	Description	Status
DA4	HDD0 Heartbeat LED	Green: HDD0 Normal; Red: HDD0 Failure
DA5	HDD1 Heartbeat LED	Green: HDD1 Normal; Red: HDD1 Failure
DA6	HDD0 Activity LED	Blue: HDD0 Active
DA7	HDD1 Activity LED	Blue: HDD0 Active
LED1	M.2 Activity LED	Green: M.2 Normal
LEDM1	BMC Activity LED	Green: BMC Normal

Drive Carrier LED Indicators			
	Color	Blinking Pattern	Behavior for Device
Activity LED	Blue	Solid On	SAS/NVMe drive installed
	Blue	Blinking	I/O activity
Status LED	Red	Solid On	Failure of drive with RSTe support
	Red	Blinking at 1 Hz	Rebuild drive with RSTe support
	Red	Blinking with two blinks and one stop at 1 Hz	Host spare for drive with RSTe support (not supported in VMD mode)
	Red	On for five seconds, then off	Power on for drive with RSTe support
	Red	Blinking at 4 Hz	Identity drive with RSTe support
	Green	Solid On	Safe to remove NVMe device (not supported in VMD mode)
	Amber	Blinking at 1 Hz	Attention state - do not remove NVMe device (not supported in VMD mode)

Connector	Description
BT1	Onboard CMOS battery
CPLD0	Complex Programmable Logic Device (CPLD) chip
FAN1	Cooling fan header reserved for liquid cooling
HDD0/HDD1	Front accessible Hard Driver Connector #0/Hard Driver Connector #1
HDD2_PWR	Power connector for HDD 2
JFP1	Front Panel Control board with KVM & USB 2.0 support (via Cable CBL-0218L)
JLED	HDD2 SATA Activity LED
JM2-1 & M.2 MH	PCIe 4.0 x4 M.2 slot (with support of M-Key 2280) (JM.2) & M.2 Mounting Hole (M.2 MH)
JTPM1	Trusted Platform Module/Port 80 connector
MEZZ1/MEZZ2	PCI Mezzanine Card Connector 1/Mezzanine Card Connector 2
MP1	Onboard 25G midplane
PWR1	Motherboard Power connector
I-SATA 1	Intel® PCH SATA 3.0 port (with RAID 0, 1, 5, 10)
VROC (JRK1)	Intel VROC key header for NVMe RAID support

Motherboard Features

Motherboard Features	
CPU	
Supports two 3rd Gen. Intel Xeon Scalable Processors (in Socket P4 LGA 4189) with up to 38 cores and a thermal design power (TDP) of up to 270W	
Memory	
- Supports up to 2TB of 3DS LRDIMM/LRDIMM/3DS RDIMM/RDIMM DDR4 (288-pin) ECC memory with speeds of 3200/2933/2666MHz in 16 memory slots - Supports up to 128G DDR4 memory per slot	
 Note: Memory speed and capacity support depends on the processors used in the system.	
DIMM Size	
Up to 128G at 1.2V	
 Note: For the latest CPU/memory updates, please refer to our website at http://www.supermicro.com/products/motherboard .	
Chipset	
Intel PCH C621A	
Expansion Slots	
Two Mezzanine card connectors (One PCIe 4.0 x 16 and One PCIe 4.0 x 8)	
Network	
Dual 25G onboard and one mezzanine (dual 25G Ethernet or 200G HDR or EDR or OPA)	
Baseboard Management Controller (BMC)	
ASPEED AST2600 BMC	
Graphics	
Graphics controller & VGA support via ASPEED AST2600 BMC	
I/O Devices	
HDD	Two HDD connectors support SATA 6G/NVMe/SAS3 (-SC2 with SAS Mezzanine card)
SATA 3.0	One SATA connector (I-SATA1)
VGA & COM Connections	One VGA connector and one COM port on KVM dongle supported by the Front Panel Control board (JFP1) (via Cable CBL-0218L)
Peripheral Devices	
Two USB 2.0 connections on the Front Panel Control board (JFP1) (via Cable CBL-0218L)	
BIOS	
- AMI BIOS - ACPI 3.0 or later, PCI firmware 4.0 support, BIOS rescue hot-key, SPI dual/quad speed support, RTC (Real Time Clock) wakeup, and SMBIOS 3.0 or later	

Power Management
• ACPI power management • Power button override mechanism • Wake-on-LAN • Power supply monitoring
System Health Monitoring
• Onboard voltage monitoring for +12V, +5V/+5V standby, +3.3V, +3.3V standby, Vcore, and Vmem. • Onboard temperature monitoring for CPU, VRM, LAN, PCH, system, peripheral, SAS, and memory • CPU and memory thermal trip support • Platform Environment Control Interface (PECI)
Fan Control
• Fan status monitoring via CMM • One fan header reserved for liquid cooling
System Management
• SuperDoctor® 5 • Server platform service
Firmware Integrity/System Security
• TPM (Trusted Platform Module) support • RoT (Root of Trust) support to protect firmware security by detecting critical data corruption, and restoring platform integrity
LED Indicators (on the Front Panel Control Board)
• CPU/system overhead LED • Power/suspended-state indicator LED • HDD activity LED • LAN activity LED
Dimensions
• 18.22" (L) x 6.30" (W) (463.00 mm x 160.02 mm) (L x W)

 **Note 1:** The CPU maximum thermal design power (TDP) is subject to chassis and heatsink cooling restrictions. For proper thermal management, please check the chassis and heatsink specifications.

Note 2: For BMC configuration instructions, please refer to the Embedded BMC Configuration User's Guide available at <http://www.supermicro.com/support/manuals/>.

Figure 1-3.
System Block Diagram

Note: This is a general block diagram and may not exactly represent the features on your motherboard. See the previous pages for the actual specifications of your motherboard.

1.2 Processor and Chipset Support

Built upon the functionality and capability of the 3rd Gen. Intel Xeon Scalable Processors (Socket P4) and the Intel C621A chipset, the B12DPT-6 motherboard increases energy efficiency, and system performance for a multitude of applications such as high performance computing, artificial intelligence (AI), deep learning (DL), big data, and enterprise applications.

Features Supported

- Performance improvements with higher core counts, up to 3 UPIs per socket @11.2GT per second
- Vector Neural Network Instructions (VNNI) support to accelerate training
- New hardware-enhanced security features help protect platform & data without compromising performance
- High PCIe performance (PCIe 4.0) with double the bandwidth of PCIe 3.0

1.3 System Health Monitoring

Onboard Voltage Monitors

An onboard voltage monitor will scan the voltages of the onboard chipset, memory, and CPU continuously. Once a voltage becomes unstable, a warning is given, or an error message is sent to the screen.

Fan Speed Control

In addition to onboard voltage monitoring on major components, system health monitoring also includes fan speed control and management, which is provided by CMM. Whenever the temperature of the CPU or the system exceeds a pre-defined threshold that is set by the manufacturer, system and CPU cooling fans will be turned on to prevent the CPU or the system from overheating.

Note: To avoid possible system overheating, please be sure to provide adequate air-flow to your system.

System Resource Alert

This feature is available when used with SuperDoctor 5® in the Windows OS environment. SuperDoctor is used to notify the user of certain system events. For example, you can configure SuperDoctor to provide you with warnings when the system temperature, CPU temperatures, voltages and fan speeds go beyond a predefined range.

1.4 ACPI Features

ACPI stands for Advanced Configuration and Power Interface. The ACPI specification defines a flexible and abstract hardware interface that provides a standard way to integrate power management features throughout a computer system, including its hardware, operating system and application software. This enables the system to automatically turn on and off peripherals such as network cards, hard disk drives and printers.

In addition to enabling operating system-directed power management, ACPI also provides a generic system event mechanism for Plug and Play, and an operating system-independent interface for configuration control. ACPI leverages the Plug and Play BIOS data structures, while providing a processor architecture-independent implementation that is compatible with appropriate Windows operating systems. For detailed information regarding OS support, please refer to the Supermicro website.

1.5 Power Supply

As with all computer products, a stable power source is necessary for proper and reliable operation. It is even more important for processors that have high CPU clock rates where noisy power transmission is present.

This motherboard utilizes an SMCi-proprietary power connector, located at PWR1, to provide power to the motherboard. Connect PWR1 to the backplane of the server for main power supply to the motherboard. In addition, connect the 4-pin SMCi-proprietary power connector, located at HDD2_PWR to the AOM-SB1-SATA31 add-on module to provide power to the HDD2 devices installed on the motherboard.

Warning! To avoid damaging the power supply or the motherboard, be sure to connect the motherboard main power connector (PWR1) to the backplane of the server, and connect the HDD2 power connector (HDD2 PWR) to the AOM-SB1-SATA31 add-on module to provide adequate power to the motherboard and the HDD2 devices installed in the system. Failure in doing so may void the manufacturer warranty on your power supply and motherboard.

1.6 Serial Port

The B12DPT-6 motherboard accommodates a serial connection (COM Port 1) to provide KVM and USB support for the system. COM Port 1, located on the Front Panel Control board (JFP1), provides legacy speeds with a baud rate of up to 115.2 Kbps as well as an advanced speed with baud rates of 250 K, 500K, or 1Mb/s for high-speed serial communication support via a serial cable (CBL-0218L).

1.7 Intel® Optane™ Persistent Memory (PMem) 200 Series Overview

The 3rd Gen. Intel Xeon Scalable Processors support Intel Optane PMem 200 Series memory. Intel Optane PMem offers higher capacities than the traditional DDR4 modules. It also provides increased storage capabilities due to data persistence in a DDR4 form factor for higher performance computing platforms with flexible configuration options.

 **Note 1:** The Intel® Optane™ Persistent Memory (PMem) 200 Series are supported by the 3rd gen Intel Xeon Scalable Platinum, Gold, and selected Silver processors.

Note 2: P1-DIMMB2/P2-DIMMB2 slots are reserved for Intel Optane PMem 200 Series memory modules only.

Chapter 2

Installation

2.1 Static-Sensitive Devices

Electrostatic Discharge (ESD) can damage electronic components. To avoid damaging your motherboard, it is important to handle it very carefully. The following measures are generally sufficient to protect your equipment from ESD.

Precautions

- Use a grounded wrist strap designed to prevent static discharge.
- Touch a grounded metal object before removing the motherboard from the antistatic bag.
- Handle the motherboard by its edges only; do not touch its components, peripheral chips, memory modules or gold contacts.
- When handling chips or modules, avoid touching their pins.
- Put the motherboard and peripherals back into their antistatic bags when not in use.
- For grounding purposes, make sure that your computer chassis provides excellent conductivity between the power supply, the case, the mounting fasteners and the motherboard.
- Use only the correct type of onboard CMOS battery. Do not install the onboard battery upside down to avoid possible explosion.

Unpacking

The motherboard is shipped in antistatic packaging to avoid static damage. When unpacking the motherboard, make sure that the person handling it is static protected.

2.2 Processor and Heatsink Installation

The processor (CPU) and processor carrier should be assembled together first to form the processor carrier assembly. This will be attached to the heatsink to form the processor heatsink module (PHM) before being installed into the CPU socket. Before installation, be sure to perform the following steps below:

- Please carefully follow the instructions given on the previous page to avoid ESD-related damages.
- Unplug the AC power cords from all power supplies after shutting down the system.
- Check that the plastic protective cover is on the CPU socket and none of the socket pins are bent. If they are, contact your retailer.
- When handling the processor, avoid touching or placing direct pressure on the LGA lands (gold contacts). Improper installation or socket misalignment can cause serious damage to the processor or CPU socket, which may require manufacturer repairs.
- Thermal grease is pre-applied on a new heatsink. No additional thermal grease is needed.
- Refer to the Supermicro website for updates on processor and memory support.
- All graphics in this manual are for illustrations only. Your components may look different.

3. Processor Carrier Assembly

Carrier with the Processor Installed

Overview of the Processor Heatsink Module

The Processor Heatsink Module (PHM) contains a heatsink, a processor carrier, and a 3rd Gen Intel Xeon Scalable processor.

1. Heatsink (with Thermal Grease)

2. Processor Carrier

3. The 3rd Gen Intel Xeon Scalable Processor

4. Processor Heatsink Module (PHM)

Creating the Processor Carrier Assembly

The processor carrier assembly contains a 3rd Gen Intel Xeon Scalable processor and a processor carrier.

To create the processor carrier assembly, please follow the steps below:

 **Note:** Before installation, be sure to follow the instructions given on Page 1 & Page 2 of this chapter to properly prepare yourself for installation.

1. Hold the processor with the LGA lands (with Gold CPU contacts) facing down. Locate the small, gold triangle at the corner of the processor and the corresponding hollowed triangle on the processor carrier as shown in the graphics below. Please note that the triangle indicates Pin 1 location.

2. First, turn over the processor carrier and locate Pin 1 on the CPU and Pin 1 on the carrier. Then, turn the processor over with the processor reverse side (gold contacts) facing up and locate CPU keys on the processor. Finally, locate the CPU keys and four latches on the carrier as shown below.

Carrier with the Processor Installed

3. Locate the lever on the CPU socket and press the lever down as shown below.

4. Using Pin 1 as a guide, carefully align the CPU keys (A & B) on the processor against the CPU keys on the carrier (a & b) as shown in the drawing below.
5. Once they are properly aligned, carefully place one end of the processor into the latch marked 1 on the carrier, and place the other end of processor into the latch marked 2.

6. After the processor is placed inside the carrier, examine the four sides of the processor, making sure that the processor is properly seated on the carrier.

Processor Carrier Assembly
(Top Side View)

Creating the Processor Heatsink Module (PHM)

After creating the processor carrier assembly, please follow the instructions below to mount the processor carrier into the heatsink to form the processor heatsink module (PHM).

 **Note:** If this is a new heatsink, the thermal grease has been pre-applied on the underside. Otherwise, apply the proper amount of thermal grease.

1. Turn the heatsink over with the thermal grease, which is on the reverse side of the heatsink, facing up. Pay attention to the two triangle cutouts (A, B) located at the diagonal corners of the heatsink as shown in the drawing below.
2. Hold the processor carrier assembly top side (with thermal grease) facing up, and locate the triangle on the CPU and the triangle on the carrier. (Triangle indicates Pin 1.)
3. Using Pin 1 as a guide, turn the processor carrier assembly over with the gold contacts facing up. Locate Pin 1 (A) on the processor and Pin 1 (a) on the processor carrier assembly "a".
4. Align the corner marked "a" on the processor carrier assembly against the triangle cutout "A" on the heatsink, and align the corners marked "b", "c", "d" on processor assembly against the corners marked "B", "C", "D" on the heatsinks
5. Once they are properly aligned, place the corner marked "a" on the processor carrier assembly into the corner of the heatsink marked "A". Repeat the same step to place the corners marked "b", "c", "d" on the processor carrier assembly into the corners of the heatsink marked "B", "C", "D" making sure that all plastic clips are properly attached to the heatsink.

Preparing the CPU Socket for Installation

This motherboard comes with a plastic protective cover installed on the CPU socket. Remove it from the socket to install the Processor Heatsink Module (PHM). Gently pull up one corner of the plastic protective cover to remove it.

CPU Socket with Plastic Protective Cover

Preparing to Install the Processor Heatsink Module (PHM) into the CPU Socket

After assembling the Processor Heatsink Module (PHM), you are ready to install it into the CPU socket. To ensure the proper installation, please follow the procedures below:

1. Locate four threaded fasteners (a, b, c, d) on the CPU socket.

2. Locate four peek nuts (A, B, C, D) and four rotating wires (1, 2, 3, 4) on the heatsink as shown in the graphics below.

3. Check the rotating wires (1, 2, 3, 4) to make sure that they are at unlatched positions as shown in the drawing below before installing the PHM into the CPU socket.

Installing the Processor Heatsink Module (PHM)

1. Align peek nut "A", which is next to the triangle (Pin 1) on the heatsink, against threaded fastener "a" on the CPU socket. Then align peek nuts "B", "C", "D" on the heatsink against threaded fasteners "b", "c", "d" on the CPU socket, making sure that all peek nuts on the heatsink are properly aligned with the correspondent threaded fasteners on the CPU socket.
2. Once they are aligned, gently place the heatsink on top the CPU socket, making sure that each peek nut is properly attached to its corresponding threaded fastener.

3. Press all four rotating wires outwards and make sure that the heatsink is securely latched onto the CPU socket.

4. With a T30-bit screwdriver, tighten all peek nuts in the sequence of "A", "B", "C", and "D" with even pressure. To avoid damaging the processor or socket, do not use a force greater than 12 lbf-in when tightening the screws.
5. Examine all corners heatsink to ensure that the PHM is firmly attached to the CPU socket.

Removing the Processor Heatsink Module from the CPU Socket

Before removing the processor heatsink module (PHM) from the motherboard, unplug the AC power cord from all power supplies after shutting down the system. Then follow the steps below:

1. Use a T30-bit screwdriver to loosen the four peek nuts on the heatsink in the sequence of #A, #B, #C, and #D.

2. Once the peek nuts are loosened from the CPU socket, press the rotating wires inwards to unlatch the PHM from the socket as shown in the drawings below.

3. Gently lift the PHM upwards to remove it from the CPU socket.

Removing the Processor Carrier Assembly from the Processor Heatsink Module (PHM)

To remove the processor carrier assembly from the PHM, please follow the steps below:

1. Detach four plastic clips (marked a, b, c, d) on the processor carrier assembly from the four corners of heatsink (marked A, B, C, D) in the drawings below.

2. When all plastic clips are detached from the heatsink, remove the processor carrier assembly from the heatsink

Removing the Processor from the Processor Carrier Assembly

Once you have removed the processor carrier assembly from the PHM, you are ready to remove the processor from the processor carrier by following the steps below.

1. Unlock the lever from its locking position and push the lever upwards to disengage the processor from the processor carrier as shown in the right drawing below.

2. Once the processor is loosened from the carrier, carefully remove the processor from the processor carrier.

 **Note:** To avoid damaging the processor and its pins, please handle the processor with care.

2.3 Motherboard Installation

All motherboards have standard mounting holes to fit different types of chassis. Make sure that the locations of all the mounting holes for both the motherboard and the chassis match. Although a chassis may have both plastic and metal mounting fasteners, metal ones are highly recommended because they ground the motherboard to the chassis. Make sure that the metal standoffs click in or are screwed in tightly.

Tools Needed

Phillips Screwdriver (1)

Phillips Screws (10)

Standoffs (10) (Only As Needed!)
(See below)

1. Standoffs used (Total 3: Only As Needed):

- Locations: Mounting holes marked with red arrows →
- Quantity: 3
- Standoff Image: 
- Standoff Specifications
 - Standoffs for AOC-IBH-X4ES-0, AOC-OPH-WFR, AOC-B25G-X4D

2. Standoff used (Total 2: Only As Needed):

- Locations: Mounting holes marked with blue arrows →
- Quantity: 2
- Standoff Image: 
- Standoff Specifications
 - for AOM-SB1-SATA31 (black)

3. Standoff used (Total 5: Only As Needed):

- Locations: Mounting holes marked with green arrows →
- Quantity: 5
- Standoff Image: 
- Standoff Specifications:
 - Standoff for the standard motherboard mounting holes

Location of Mounting Holes

Note 1: To avoid damaging the motherboard and its components, please do not use a force greater than 8 lbf-in on each mounting screw during motherboard installation.

Note 2: Some components are very close to the mounting holes. Please take precautionary measures to avoid damaging these components when installing the motherboard to the chassis.

Installing the Motherboard

1. Locate the mounting holes on the motherboard.
2. Locate the matching mounting holes on the chassis. Align the mounting holes on the motherboard against the mounting holes on the chassis.
3. Install the motherboard into the chassis carefully to avoid damaging other motherboard components.
4. Using the Phillips screwdriver, insert a pan head #6 screw into a mounting hole on the motherboard and its matching mounting hole on the chassis.

5. Repeat Step 5 to insert #6 screws into all mounting holes.
6. Make sure that the motherboard is securely placed in the chassis.

 **Note:** Images displayed are for illustration only. Your chassis or components might look different from those shown in this manual.

2.4 Memory Support and Installation

Note: Check the Supermicro website for recommended memory modules.

Important: Exercise extreme care when installing or removing DIMM modules to prevent any possible damage.

Memory Support

The B12DPT-6 supports up to 2TB of 3DS LRDIMM/LRDIMM/3DS RDIMM/RDIMM DDR4 (288-pin) ECC memory with speeds of 3200/2933/2666MHz in 16 memory slots.

Note 1: This motherboard supports up to 128G of DDR4 memory per DIMM slot.

Note 2: Memory speed support depends on the processors used in the system.

Memory Support for the 3rd Gen Intel Xeon Scalable Processors

DDR4 Memory Support for the 3rd Gen Intel Xeon Scalable Processors					
Type	Ranks Per DIMM & Data Width	DIMM Capacity (GB)		Speed (MT/s); Voltage (V); Slots Per Channel (SPC) and DIMMs Per Channel (DPC)	
				1DPC (1-DIMM Per Channel)	2DPC (2-DIMM Per Channel)
		8Gb	16Gb	1.2 V	1.2 V
RDIMM	SRx8	8GB	16GB	3200	3200
	SRx4	16GB	32GB		
	DRx8	16GB	32GB		
	DRx4	32GB	64GB		
RDIMM 3Ds	(4R/8R) X4	2H- 64 GB 4H-128 GB	2H- 128 GB 4H-256 GB		
LRDIMM	QRx4	64GB	128GB	3200	3200

When 2 CPUs are used:	Memory Population Sequence
2 CPUs & 2 DIMMs (Note)	CPU1: P1-DIMMA1 CPU2: P2-DIMMA1
2 CPUs & 4 DIMMs (Note)	CPU1: P1-DIMMA1/P1-DIMME1 CPU2: P2-DIMMA1/P2-DIMME1
2 CPUs & 6 DIMMs	CPU1: P1-DIMMA1/P1-DIMME1/P1-DIMMC1/P1-DIMMG1 CPU2: P2-DIMMA1/P2-DIMME1
2 CPUs & 8 DIMMs (Note)	CPU1: P1-DIMMA1/P1-DIMME1/P1-DIMMC1/P1-DIMMG1 CPU2: P2-DIMMA1/P2-DIMME1/P2-DIMMC1/P2-DIMMG1
2 CPUs & 10 DIMMs	CPU1: P1-DIMMA1/P1-DIMME1/P1-DIMMC1/P1-DIMMG1/P1-DIMMB1/P1-DIMMF1 CPU2: P2-DIMMA1/P2-DIMME1/P2-DIMMC1/P2-DIMMG1
2 CPUs & 12 DIMMs (Note)	CPU1: P1-DIMMA1/P1-DIMME1/P1-DIMMC1/P1-DIMMG1/P1-DIMMB1/P1-DIMMF1 CPU2: P2-DIMMA1/P2-DIMME1/P2-DIMMC1/P2-DIMMG1/P2-DIMMB1/P2-DIMMF1
2 CPUs & 14 DIMMs	CPU1: P1-DIMMA1/P1-DIMME1/P1-DIMMC1/P1-DIMMG1/P1-DIMMB1/P1-DIMMF1/P1-DIMMD1/P1-DIMMH1 CPU2: P2-DIMMA1/P2-DIMME1/P2-DIMMC1/P2-DIMMG1/P2-DIMMB1/P2-DIMMF1
2 CPUs & 16 DIMMs (Note)	CPU1: P1-DIMMA1/P1-DIMME1/P1-DIMMC1/P1-DIMMG1/P1-DIMMB1/P1-DIMMF1/P1-DIMMD1/P1-DIMMH1 CPU2: P2-DIMMA1/P2-DIMME1/P2-DIMMC1/P2-DIMMG1/P2-DIMMB1/P2-DIMMF1/P2-DIMMD1/P2-DIMMH1

Note: This memory configuration is recommended by Supermicro for optimal memory performance. Please use this configuration to maximize your memory performance.

PMem 200 Series Population Table

 **Note:** The Intel® Optane™ Persistent Memory (PMem) 200 Series are supported by the 3rd Gen Intel Xeon Scalable Platinum, Gold, and selected Silver processors.

PMem 200 Series Population Table for B12DP 16-DIMM Motherboards (within 1 CPU socket)										
DDR4+PMem	Mode	AD Interleave	P1-DIMMF1	P1-DIMME1	P1-DIMMH1	P1-DIMMG1	P1-DIMMC1	P1-DIMMD1	P1-DIMMA1	P1-DIMMB1
4+4	AD MM	One - x4	PMem	DDR4	PMem	DDR4	DDR4	PMem	DDR4	PMem
		One - x4	DDR4	PMem	DDR4	PMem	PMem	DDR4	PMem	DDR4
6+1	AD	One - x1	DDR4	DDR4	-	DDR4	DDR4	PMem	DDR4	DDR4
			-	DDR4	DDR4	DDR4	DDR4	DDR4	DDR4	PMem
			DDR4	DDR4	PMem	DDR4	DDR4	-	DDR4	DDR4
			PMem	DDR4	DDR4	DDR4	DDR4	DDR4	DDR4	-
			DDR4	DDR4	DDR4	-	PMem	DDR4	DDR4	DDR4
			DDR4	-	DDR4	DDR4	DDR4	DDR4	PMem	DDR4
			DDR4	DDR4	DDR4	PMem	-	DDR4	DDR4	DDR4
			DDR4	PMem	DDR4	DDR4	DDR4	DDR4	-	DDR4

Legend (for the table above)	
DDR4 Type and Capacity	
DDR4	See Validation Matrix (DDR4 DIMMs validated with PMem)
Capacity	
PMem	Any Capacity (Uniformly for all channels for a given configuration)

- Mode definitions: AD = App Direct Mode, MM = Memory Mode.
- No mixing of PMem and NVDIMMs within the platform.
- For MM, NM/FM ratio is between 1:4 and 1:16. (NM = Near Memory (DRAM); FM = Far Memory (PMem)).
- Matrix targets configs for optimized PMem to DRAM cache ratio in MM mode.
- For each individual population, different PMem rearrangements among channels are permitted so long as the configuration doesn't break B12DP Memory population rules.
- Ensure the same DDR4 DIMM type and capacity are used for each DDR4 + PMem population.
- If the system detects an unvalidated configuration, then the system issues a BIOS warning. The CLI functionality is limited in non-POR configurations, and select commands will not be supported.

Validation Matrix (DDR4 DIMMS with PMem 200 Series)			
DIMM Type	Ranks Per DIMM & Data Width (Stack)	DIMM Capacity (GB)	
		DRAM Density	
		8Gb	16Gb
RDIMM (up to 3200)	1Rx8	N/A	N/A
	1Rx4	16GB	32GB
	1Rx8	16GB	32GB
	1Rx4	32GB	64GB
RDIMM 3DS (up to 3200)	4Rx4 (2H)	N/A	128GB
	8Rx4 (4H)	NA	256GB
LRDIMM (up to 3200)	4Rx4	64GB	128GB
LRDIMM 3DS (up to 3200)	4Rx4 (2H)	N/A	N/A
	8Rx4 (4H)	128GB	256GB

DIMM Installation

1. Insert the desired number of DIMMs into the memory slots based on the recommended DIMM population tables in the previous section. Locate DIMM memory slots on the motherboard as shown on the left.
2. Push the release tabs outwards on both ends of the DIMM slot to unlock it.

3. Align the key of the DIMM module with the receptive point on the memory slot.

4. Align the notches on both ends of the module against the receptive points on the ends of the slot.

5. Push both ends of the module straight down into the slot until the module snaps into place.
6. Press the release tabs to the lock positions to secure the DIMM module into the slot.

DIMM Removal

Press both release tabs on the ends of the DIMM module to unlock it. Once the DIMM module is loosened, remove it from the memory slot.

Warning! Please do not use excessive force when pressing the release tabs on the ends of the DIMM socket to avoid causing any damage to the DIMM module or the DIMM socket. Please handle DIMM modules with care. Carefully follow all the instructions given on Page 1 of this chapter to avoid ESD-related damages done to your memory modules or components.

2.5 Front Panel Control Board and I/O Connectors

This section provides the information on the Front Panel Control board and various I/O connectors on the motherboard.

Front Panel Control Board (AOM-SB410-01)

The Front Panel Control board, located at JFP1, provides KVM (keyboard/mouse/video) support and two USB 2.0 connections (USB 2_1/USB2_2) for front access via an appropriate cable (CBL-0218L). Please connect the cable (CBL-0218L) to JKVM1 on the AOM-SB410-01 to use KVM dongle and USB connections. Please contact Supermicro to obtain the optional CBL-0218L cable as needed. Refer to the layout below for the location of the Front Panel Control board.

1. Front Panel Control Board (JFP1)

HDD0/HDD1 Connectors

Two hard drive disk (HDD) connectors are located at HDD0 and HDD1 on the motherboard. These two HDD connectors support SATA 6G/NVMe/SAS3 (-SC2 with SAS Mezzanine card). Refer to the layout below for the locations of HDD0 and HDD1.

MEZZ1/MEZZ2 Card Connectors

The Mezzanine card connectors, located at MEZZ1/MEZZ2, support two PCIe Gen 4 riser cards. Install a PCIe 4.0 x16 riser card on MEZZ1 and a PCIe 4.0 x8 riser card on MEZZ2. Refer to the layout below for the locations of MEZZ1 and MEZZ2.

1. HDD0
2. HDD1
3. MEZZ1
4. MEZZ2

2.6 Connectors and Headers

Power Connections

Motherboard Power Connectors

This motherboard utilizes an SMCI-proprietary power connector, located at PWR1, to provide main power to the motherboard. Connect PWR1 to the backplane of the server for main power supply to the motherboard. Be sure also to connect the 4-pin SMCI-proprietary power connector, located at HDD2_PWR, to the AOM-SB1-SATA31 to provide power to the HDD2 devices used on the motherboard. Failure in doing so may void the manufacturer warranty on your power supply and motherboard.

1. Motherboard (MB) Main PWR Connector (PWR1)
2. HDD2_PWR

Headers

Fan Header

A 4-pin fan header (FAN1) is located on the motherboard. This fan header is reserved for liquid cooling. Refer to the layout below for FAN1 location.

Fan Header Pin Definitions	
Pin#	Definition
1	Ground
2	2.5A/+12V
3	Tachometer
4	PWM_Control

1. FAN1

TPM/Port 80 Header

The JTPM1 header is used to connect a Trusted Platform Module (TPM)/Port 80, which is available from Supermicro (optional). A TPM/Port 80 connector is a security device that supports encryption and authentication in hard drives. It allows the motherboard to deny access if the TPM associated with the hard drive is not installed in the system. See the layout below for the location of the TPM header. Please go to the following link for more information on the TPM: <http://www.supermicro.com/manuals/other/TPM.pdf>.

Trusted Platform Module Header Pin Definitions			
Pin#	Definition	Pin#	Definition
1	+3.3V	2	SPI_CS#
3	RESET#	4	SPI_MISO
5	SPI_CLK	6	GND
7	SPI_MOSI	8	NC
9	+3.3V Stdbby	10	SPI_IRQ#

1. TPM Header

VROC RAID Key Header

A VROC RAID Key header is located at JRK1 on the motherboard. Install a VROC RAID Key on JRK1 for NVMe RAID support as shown in the illustration below. Please refer to the layout below for the location of JRK1.

Intel VROC Key Pin Definitions	
Pin#	Definition
1	Ground
2	3.3V Standby
3	Ground
4	PCH RAID Key

Note: The graphics contained in this user's manual are for illustration only. The components installed in your system may or may not look exactly the same as the graphics shown in the manual.

1. VROC RAID Key (JRK1)

PCIe 4.0 M.2 Slot

The B12DPT-6 motherboard has one PCIe 4.0 M.2 slot. M.2 allows for a variety of card sizes, increased functionality, and spatial efficiency. The M.2 slot on the motherboard supports PCIe 4.0 x4 M.2 NVMe SSDs in the 2280 form factor.

1. M.2 Slot
2. M.2 Mounting Hole

I-SATA 3.0 Port (Available on a System SKu that supports SATA 3.0)

The B12DPT-6 has one SATA 3.0 port (I-SATA1), which is supported by the C621A PCH, on the motherboard. Connect this SATA port to the AOM-SB1-SATA31 add-on module to use SATA 3.0 connections on a system SKU that supports SATA 3.0.

**1. I-SATA1**

HDD2 SATA Activity LED Connector (Available on the system SKU that supports SATA 3.0)

JLED is a 3-pin connector used to indicate the status of HDD2 SATA Activity. Connect JLED to the AOM-SB1-SATA31 add-on module to show HDD2 SATA activity. Refer to the table below for more information.

HDD2 SATA Activity LED Connector JLED	
LED Color	Definition
On	HDD2 SATA: Active

1. HDD2 SATA Activity LED Connector

2.7 Jumper Settings

How Jumpers Work

To modify the operation of the motherboard, jumpers can be used to choose between optional settings. Jumpers create shorts between two pins to change the function of the connector. Pin 1 is identified with a square solder pad on the printed circuit board. See the diagram below for an example of jumping pins 1 and 2. Refer to the motherboard layout page for jumper locations.

 **Note:** On two-pin jumpers, "Closed" means the jumper is on and "Open" means the jumper is off the pins.

CMOS Clear

JBT1 is used to clear CMOS, which will also clear any passwords. Instead of pins, this jumper consists of contact pads to prevent accidentally clearing the contents of CMOS.

To Clear CMOS

1. First power down the system and unplug the power cord(s).
2. Remove the cover of the chassis to access the motherboard and remove the battery from the motherboard.
3. Short the CMOS pads with a metal object such as a small screwdriver for at least four seconds.
4. Remove the screwdriver (or shorting device).
5. Replace the cover, reconnect the power cord(s), and power on the system.

 **Note 1:** Clearing CMOS will also clear all passwords.

Note 2: Do not use the PW_ON connector to clear CMOS.

1. JBT1

ME Recovery

JPME1 is used for ME Firmware Recovery mode, which will limit system resource for essential function use only without putting restrictions on power use. In the single operation mode, online upgrade will be available via Recovery mode. See the table below for pin definitions.

ME Recovery Jumper Settings	
Jumper Setting	Definition
Pins 1-2	Normal (Default)
Pins 2-3	ME Recovery

1. JPME1

2.8 LED Indicators

LAN LEDs

LAN LED indicators are located on the Front Panel Control board. The LED on the right indicates the status of LAN activity. When this LED is blinking green, the LAN connections are active. The LED on the left may be green or amber to indicate the status of LAN links or LAN connections. Refer to the tables below for more information.

LAN1/LAN2 Activity LED LED State		
Color	Status	Definition
Green	Blinking	Active

LAN1/2 Link LED (Left) LED State	
LED Color	Definition
Green	Onboard 25G supported
Amber	Mezzanine Card: Active

RJ45 Connector LEDs

An RJ45 connector is located on the 25G Midplane. The LED indicator on the right indicates activity, while the LED on the left indicates the speed of the connection. Refer to the table below for more information.

RJ45 Connector LEDs		
	Color/State	Definition
Link (left)	Green: Solid Amber: Solid	100 Mbps 1Gbps
Activity (Right)	Amber: Blinking	Active

1. LAN1/LAN2 LEDs & RJ45 Connector LEDs on the 25G Midplane

BMC Heartbeat LED

A BMC Heartbeat LED is located at LEDM1 on the motherboard. When LEDM1 is blinking green, the BMC is working properly. Refer to the table below for more information.

BMC Heartbeat LED Indicator	
LED Color	Definition
Green: Blinking	BMC Normal/Active

M.2 Activity LED

An M.2 Activity LED is located at LED1 on the motherboard. When LED1 is blinking, M.2 is active. Refer to the table below for more information.

M.2 Activity LED State	
LED Color	Definition
Green: Blinking	M.2 Active

- 1. BMC Heartbeat LED
- 2. M.2 Activity LED

HDD0/HDD1 Heartbeat LED Indicators

Two HDD Heartbeat LED indicators are located at DA4 and DA5 on the motherboard. These LEDs are used to indicate if it is safe for the user to remove the NVMe drives from the system. Refer to the table below for more information.

HDD0 (DA4)/HDD1(DA5) Heartbeat LED Indicators	
LED Color	Definition
Green: Solid On	Safe to remove the NVMe drives
Green: Blinking	Not ready for NVMe drive removal

HDD0/HDD1 Activity LED Indicators

Two HDD Activity LED indicators are located at DA6 and DA7 on the motherboard. DA6 is used for HDD0, and DA7, for HDD1. Refer to the table below for more information.

HDD0 (DA6)/HDD1(DA7) Activity LED Indicators	
LED Color	Definition
Blue: Blinking	HDD Active

1. HDD0 Heartbeat LED
2. HDD1 Heartbeat LED
3. HDD0 Activity LED
4. HDD1 Activity LED

Chapter 3

Troubleshooting

3.1 Troubleshooting Procedures

Use the following procedures to troubleshoot your system. If you have followed all of the procedures below and still need assistance, refer to the 'Technical Support Procedures' and/or 'Returning Merchandise for Service' section(s) in this chapter. Always disconnect the AC power cord before adding, changing or installing any non hot-swap hardware components.

Before Power On

1. Make sure that there are no short circuits between the motherboard and chassis.
2. Remove all add-on cards and add-on module, such as AOM-SB410-01 from the motherboard.
3. Install the CPU (making sure it is fully seated) and connect the Front Panel Control board to the motherboard.

No Power

1. Make sure that there are no short circuits between the motherboard and the chassis.
2. Make sure that the motherboard main power connector (PWR1) and the HDD2 power connector (HDD2_PWR) are properly connected.
3. Check that the 115V/230V switch, if available, on the power supply is properly set.
4. Turn the power switch on and off to test the system, if applicable.
5. The battery on your motherboard may be old. Check to verify that it still supplies ~3VDC. If it does not, replace it with a new one.

No Video

1. If the power is on, but you do not have video, remove all add-on cards/add-on modules and cables.
2. Remove all memory modules and turn on the system (Also check the specs of memory modules, reset the memory, or try a different one).

System Boot Failure

If the system does not display POST (Power-On-Self-Test) or does not respond after the power is turned on, check the following:

- To find the cause of a boot failure, clear the CMOS settings by unplugging the power cord and contacting both pads on the CMOS clear jumper (JBT1). Refer to Section 2-7 in Chapter 2.
- Remove all components from the motherboard, especially the DIMM modules. Make sure that system power is on and that memory error beeps are activated.
- Turn on the system with only one DIMM module installed. If the system boots, check for bad DIMM modules or slots by following the Memory Errors Troubleshooting procedure in this chapter.

Memory Errors

When a memory error has occurred, check the following to resolve the problem:

1. Make sure that the memory modules are compatible with the system and are properly installed. See Chapter 2 for installation instructions. (For memory compatibility, refer to the "Tested Memory List" link on the motherboard's product page to see a list of supported memory.)
2. Check if different speeds of DIMMs have been installed. It is strongly recommended that you use the same RAM type and speed for all DIMM modules in the system.
3. Make sure that you are using the correct type of ECC DDR4 modules recommended by the manufacturer.
4. Check for bad DIMM modules or slots by swapping a single module among all memory slots and check the results.

Losing the System's Setup Configuration

1. Make sure that you are using a high-quality power supply. A poor-quality power supply may cause the system to lose the CMOS setup information. Refer to Chapter 1 and Chapter 2 for detailed information on the motherboard main power connector (PWR1) and the HDD2 power connector (HDD2_PWR).
2. The battery on your motherboard may be old. Check to verify that it still supplies ~3VDC. If it does not, replace it with a new one.

When the System Becomes Unstable

A. If the system becomes unstable during or after OS installation, check the following:

1. CPU/BIOS support: Make sure that your CPU is supported and that you have the latest BIOS installed in your system.
2. Memory support: Make sure that the memory modules are supported by testing the modules using memtest86 or a similar utility.

Note: Click on the "Tested Memory List" link on the motherboard's product page to see a list of supported memory.

3. HDD support: Make sure that all hard disk drives (HDDs) work properly. Replace the bad HDDs with good ones.
4. System cooling: Check the system cooling and make sure that the liquid cooling device installed on the header FAN1, which is located on the motherboard, works properly.
5. Adequate power supply: Make sure that the power supply provides adequate power to the system. Make sure that the motherboard main power connector (PWR1) and the HDD2 power connector (HDD2_PWR) are connected to the power supplies. Please refer to our website for more information on the minimum power requirements.
6. Proper software support: Make sure that the correct drivers are used.

B. If the system becomes unstable before or during OS installation, check the following:

1. Source of installation: Make sure that the devices used for installation are working properly, including boot devices such as CD/DVD.
2. Add-on card and add-on module connections: Check to make sure that all add-on cards as well as add-on modules are connected and working properly.
3. Using the minimum configuration for troubleshooting: Remove all unnecessary components (starting with add-on cards first), and use the minimum configuration (but with the CPU and a memory module installed) to identify the trouble areas. Refer to the steps listed in Section A above for proper troubleshooting procedures.

4. Identifying bad components by isolating them: If necessary, remove a component in question from the chassis, and test it in isolation to make sure that it works properly. Replace a bad component with a good one.
5. Check and change one component at a time instead of changing several items at the same time. This will help isolate and identify the problem.
6. To find out if a component is good, swap this component with a new one to see if the system will work properly. If so, then the old component is bad. You can also install the component in question in another system. If the new system works, the component is good and the old system has problems.

3.2 Technical Support Procedures

Before contacting Technical Support, please take the following steps. Also, please note that as a motherboard manufacturer, Supermicro also sells motherboards through its channels, so it is best to first check with your distributor or reseller for troubleshooting services. They should know of any possible problems with the specific system configuration that was sold to you.

1. Please go through the Troubleshooting Procedures and Frequently Asked Questions (FAQ) sections in this chapter or see the FAQs on our website (<http://www.supermicro.com/FAQ/index.php>) before contacting Technical Support.
2. BIOS upgrades can be downloaded from our website (http://www.supermicro.com/ResourceApps/BIOS_BMC_Intel.html).
3. If you still cannot resolve the problem, include the following information when contacting Supermicro for technical support:
 - Motherboard model and PCB revision number
 - BIOS release date/version (This can be seen on the initial display when your system first boots up.)
 - System configuration
4. An example of a Technical Support form is on our website at <http://www.supermicro.com/RmaForm/>.
5. Distributors: For immediate assistance, please have your account number ready when placing a call to our Technical Support department. We can be reached by email at support@supermicro.com.

3.3 Frequently Asked Questions

Question: What type of memory does my motherboard support?

Answer: This motherboard supports up to 2TB of 3DS LRDIMM/LRDIMM/3DS RDIMM/RDIMM DDR4 (288-pin) ECC memory with speeds of 3200/2933/2666MHz in 16 slots. To enhance memory performance, do not mix memory modules of different speeds and sizes. Please follow all memory installation instructions given on Section 2-4 in Chapter 2.

Question: How do I update my BIOS?

Answer: It is recommended that you do not upgrade your BIOS if you are not experiencing any problems with your system. Updated BIOS files are located on our website at http://www.supermicro.com/ResourceApps/BIOS_BMC_Intel.html. Please check our BIOS warning message and the information on how to update your BIOS on our website. Select your motherboard model and download the BIOS file to your computer. Also, check the current BIOS revision to make sure that it is newer than your BIOS before downloading.

Note 1: The SPI BIOS chip used on this motherboard cannot be removed. Send your motherboard back to our RMA Department at Supermicro for repair.

Note 2: For BIOS Update and Recovery instructions, please refer to the Firmware Update and Recovery Instructions for Supermicro's B12 Motherboards User's Guide posted at <http://www.supermicro.com/support/manuals/>.

Warning: To prevent possible boot failure, *do not* shut down or reset the system while updating the BIOS if you should decide to update the BIOS!

3.4 Battery Removal and Installation

Battery Removal

To remove the onboard battery, follow the steps below:

1. Power off your system and unplug your power cable.
2. Locate the onboard battery as shown below.
3. Using a tool such as a pen or a small screwdriver, push the battery lock outwards to unlock it. Once unlocked, the battery will pop out from the holder.
4. Remove the battery.

Proper Battery Disposal

Warning: Please handle used batteries carefully. Do not damage the battery in any way; a damaged battery may release hazardous materials into the environment. Do not discard a used battery in the garbage or a public landfill. Please comply with the regulations set up by your local hazardous waste management agency to dispose of your used battery properly.

Battery Installation

To install an onboard battery, follow the steps below:

1. Power off your system and unplug your power cable.
2. Locate the onboard battery as shown below
3. Identify the battery's polarity. The positive (+) side should be facing up.
4. Insert the battery into the battery holder and push it down until you hear a click to ensure that the battery is securely locked.

Warning: When replacing a battery, be sure to only replace it with the same type.

3.5 Returning Merchandise for Service

A receipt or copy of your invoice marked with the date of purchase is required before any warranty service will be rendered. You can obtain service by calling your vendor for a Returned Merchandise Authorization (RMA) number. When returning the motherboard to the manufacturer, the RMA number should be prominently displayed on the outside of the shipping carton, and the shipping package is mailed prepaid or hand-carried. Shipping and handling charges will be applied for all orders that must be mailed when service is complete. For faster service, you can also request a RMA authorization online (<http://www.supermicro.com/RmaForm/>).

This warranty only covers normal consumer use and does not cover damages incurred in shipping or from failure due to the alternation, misuse, abuse or improper maintenance of products.

During the warranty period, contact your distributor first for any product problems.

Chapter 4

UEFI BIOS

4.1 Introduction

This chapter describes the AMIBIOS™ setup utility for the B12DPT-6 motherboard. The BIOS is stored on a chip and can be easily upgraded using the BMC WebUI or the SUM utility.

 **Note:** Due to periodic changes to the BIOS, some settings may have been added or deleted and might not yet be recorded in this manual. Please refer to the Manual Download area of our website for any changes to the BIOS that may not be reflected in this manual.

Starting the Setup Utility

To enter the BIOS setup utility, press the <Delete> key while the system is booting up. In most cases, the <Delete> key is used to invoke the BIOS setup screen; however, in other cases, other hot keys, such as <F1>, <F2>, may be used for this purpose. Each main BIOS menu option is described in this manual.

The Main BIOS screen has two main frames. The left frame displays all the options that can be configured. “Grayed-out” options cannot be configured. The right frame displays the key legend. Above the key legend is an area reserved for a text message. When an option is selected in the left frame, it is highlighted in white. Often a text message will accompany it. Please note that the system BIOS has default text messages built in, and we retain the option to include, omit, or change any of these text messages. Settings printed in **Bold** are the default values.

A "►" indicates a submenu. Highlighting such an item and pressing the <Enter> key will open the list of settings within that submenu.

The BIOS setup utility uses a key-based navigation system called hot keys. Most of these hot keys (<F1>, <F2>, <F3>, <F4>, <Enter>, <ESC>, <Arrow> keys, etc.) can be used at any time during the setup navigation process.

4.2 Main Setup

When you first enter the AMI BIOS setup utility, you will see the Main setup screen. You can always return to the Main setup screen by selecting the Main tab on the top of the screen. The Main BIOS setup screen is shown below.

System Date/System Time

Use this feature to change the system date and time. To change system date and time settings, please highlight *System Date* or *System Time* using the arrow keys and enter new values using the keyboard. Press the <Tab> key or the arrow keys to move between fields. The date must be entered in Day MM/DD/YYYY format. The time is entered in HH:MM:SS format.

 **Note:** The time is in the 24-hour format. For example, 5:30 P.M. appears as 17:30:00. The default value for the date setting is the BIOS build date after the RTC (Real Time Clock) reset.

Supermicro B12DPT

BIOS Version

This feature displays the version of the BIOS ROM used in the system.

Build Date

This feature displays the date when the version of the BIOS ROM used in the system was built.

CPLD Version

This feature displays the version of the CPLD (Complex-Programmable Logical Device) used in the system.

Memory Information

Total Memory

This feature displays the total size of system memory detected by the BIOS.

Memory Speed

This feature displays the speed of the memory modules installed in the system.

4.3 Advanced Setup Configurations

Use the arrow keys to select the Advanced submenu and press <Enter> to access the submenu items.

Warning: Take Caution when changing the Advanced settings. An incorrect value may cause the system to malfunction. When this occurs, restore the setting to the manufacturer default setting.

► Boot Feature

This section allows the user to configure the following Boot Feature setting as shown in the screen below:

Quiet Boot

Use this feature to select the screen between displaying POST messages or the OEM logo at bootup. Select Disabled to display the POST messages. Select Enabled to display the OEM logo instead of the normal POST messages. The options are **Enabled** and Disabled.

Note: BIOS POST (Power-on Self Test) messages are always displayed regardless of the setting for this feature.

Option ROM Messages

Use this feature to set the display mode for the Option ROM. Select Keep Current to use the current AddOn ROM display settings. Select Force BIOS to use the Option ROM display mode set by the system BIOS. The options are **Force BIOS** and Keep Current.

Bootup NumLock State

Use this feature to set the Power-on state for the Numlock key. The options are Off and **On**.

Wait For 'F1' If Error

Select Enabled to force the system to wait until the <F1> key is pressed if an error occurs. The options are Disabled and **Enabled**.

INT19 Trap Response

Interrupt 19 is the software interrupt that handles the boot disk function. When this feature is set to Immediate, the ROM BIOS of the host adaptors will "capture" Interrupt 19 at bootup immediately and allow the drives that are attached to these host adaptors to function as bootable disks. If this feature is set to Postponed, the ROM BIOS of the host adaptors will not capture Interrupt 19 immediately to allow the drives attached to these adaptors to function as bootable devices at bootup. The options are **Immediate** and Postponed.

Re-try Boot

When EFI (Extensible Firmware Interface) Boot is selected, the system BIOS will automatically reboot the system from an EFI boot device after an initial boot failure. Select Legacy Boot to allow the BIOS to automatically reboot the system from a Legacy boot device after an initial boot failure. The options are **Disabled**, Legacy Boot, and EFI Boot.

Power Configuration

Watch Dog Function

Select Enabled to allow the Watch Dog timer to reboot the system when it is inactive for more than 5 minutes. The options are Enabled and **Disabled**.

If this feature is set to Enabled, the following feature will display:

Watch Dog Function Trigger (Available when "Watch Dog Function" is set to Enabled.)

This feature allows the user to determine how the watch dog function can be triggered. The options are NMI and **Reset**.

Front USB Port(s)

Select Enabled to allow the specific type of USB devices to be used in the front USB ports. Select Enabled (Dynamic) to allow or disallow this particular type of USB devices to be used in the front USB ports without rebooting the system. The options are **Enabled**, Disabled, and Enabled (Dynamic).

Rear USB Port(s)

Select Enabled to allow the specific type of USB devices to be used in the rear USB ports. Select Enabled (Dynamic) to allow or disallow this particular type of USB devices to be used in the rear USB ports without rebooting the system. The options are **Enabled**, Disabled, and Enabled (Dynamic).

BMC Direct USB Port(s)

Select Enabled to use the BMC-direct-USB devices in the USB ports. Select Disabled to disable BMC-direct-USB device support in your system. The options are **Enabled** and Disabled.

Power Button Function

This feature controls how the system shuts down when the power button is pressed. Select 4 Seconds Override to power off the system after pressing and holding the power button for 4 seconds or longer. Select Instant Off to instantly power off the system as soon as the user presses the power button. The options are 4 Seconds Override and **Instant Off**.

► CPU Configuration

Warning: Setting the wrong values in the following sections may cause the system to malfunction.

► Processor Configuration

The following CPU information will be displayed:

- Processor BSP Revision
- Processor Socket
- Processor ID
- Processor Frequency
- Processor Max Ratio
- Processor Min Ratio
- Microcode Revision
- L1 Cache RAM (Per Core)
- L2 Cache RAM (Per Core)
- L3 Cache RAM (Per Core)
- Processor 0 Version
- Processor 1 Version

►CPU Socket 0 Configuration/CPU Socket 1 Configuration

When you select this submenu and press <Enter>, the following features will display:

Available Bitmap: The available Bitmap will be displayed.

Core Disable Bitmap (Hex)

Enter 0 to enable all CPU cores. Enter FFFFFFFFFF to disable all CPU cores. Please note that at least one core per CPU must be enabled. Disabling all cores is not allowed. The default option is **0**.

Hyper-Threading (ALL)

Select Enable to use Intel Hyper-Threading Technology to enhance CPU performance. The options are **Enable** and Disable.

Hardware Prefetcher

If this feature is set to Enable, the hardware prefetcher will prefetch data from the main system memory to the Level 2 cache to help expedite data transaction for memory performance enhancement. The options are Disable and **Enable**.

Adjacent Cache Prefetch

Select Enable for the CPU to prefetch both cache lines for 128 bytes as comprised. Select Disable for the CPU to prefetch both cache lines for 64 bytes. The options are Disable and **Enable**. (**Note:** Refer to Intel's website for detailed information.)

DCU Streamer Prefetcher

If this feature is set to Enable, the DCU (Data Cache Unit) streamer prefetcher will prefetch data streams from the cache memory to the DCU (Data Cache Unit) to speed up data accessing and processing to enhance CPU performance. The options are Disable and **Enable**.

DCU IP Prefetcher

This feature allows the system to use the sequential load history, which is based on the instruction pointer of previous loads, to determine whether the system will prefetch additional lines. The options are **Enable** and Disable.

LLC Prefetch

If this feature is set to Enable, LLC (hardware cache) prefetching on all threads will be supported. The options are **Enable** and Disable.

Extended APIC (Extended Advanced Programmable Interrupt Controller)

Based on the Intel Hyper-Threading technology, each logical processor (thread) is assigned 256 APIC IDs (APIDs) in 8-bit bandwidth. When this feature is set to Enable, the APIC ID will be expanded from 8 bits to 16 bits to provide 512 APIDs to each thread to enhance CPU performance. The options are **Disable** and Enable.

Enable Intel® TXT

Select Enabled to enable Intel Trusted Execution Technology (TXT) support to enhance system security and data integrity. The options are **Disable** and Enable.

Note: For more information on TPM, please refer to the TPM manual at <http://www.supermicro.com/manuals/other>.

VMX (Not Available when "Enable Intel® TXT" is set to Enable)

Select Enable to enable the Intel Vanderpool Technology for Virtualization platform support, which will allow multiple operating systems to run simultaneously on the same computer to maximize system resources for performance enhancement. The options are **Enable** and Disable.

Enable SMX

Select Enable to support Safer Mode Extensions (SMX) which will provide a programming interface and allow the system software to create a controlled environment to support the trusted platform configured by the end user and to validate a virtual machine that monitors the user-configured platform before it is allowed to run. The options are **Disable** and Enable.

PPIN Control

Select Unlock/Enable to use the Protected-Processor Inventory Number (PPIN) in the system. The options are **Unlock/Enable** and Lock/Disable.

AES-NI

Select Enable to use the Intel Advanced Encryption Standard (AES) New Instructions (NI) to ensure data security. The options are **Enable** and Disable.

Limit CPU PA to 46 bits

Select Enable to limit CPU physical address to 46 bits to support the older Hyper-v CPU platform. The options are Enable and **Disable**.

►Advanced Power Management Configuration**Power Technology**

Select Energy Efficient to support power-saving mode. Select Custom to customize system power settings. Select Disabled to disable power-saving settings. The options are Disable, Energy Efficient, and **Custom**.

Power Performance Tuning (Available when "Power Technology" is set to Custom)

Select BIOS Controls EPB to allow the system BIOS to configure the Power-Performance Tuning Bias setting. The options are BIOS Controls EPB and **OS Controls EPB**.

ENERGY_PERF_BIAS_CFG Mode (ENERGY PERFORMANCE BIAS CONFIGURATION Mode) (Available when "Power Performance Tuning" is set to BIOS Controls EPB)

Use this feature to configure the proper operation setting for your machine by achieving the desired system performance level and energy saving (efficiency) level at the same time. Select Performance to enhance system performance; however, this may consume more power as energy is needed to fuel the processors for operation. The options are Performance, **Balanced Performance**, Balanced Power, and Power.

►CPU P State Control (Available when "Power Technology" is set to Custom)**SpeedStep (P-States)**

EIST (Enhanced Intel SpeedStep Technology) allows the system to automatically adjust the processor voltage and core frequency in an effort to reduce power consumption and heat dissipation. Please refer to Intel's website for detailed information. The options are Disable and **Enable**.

Intel SST-PP (Speed Select Technology-Performance Profile)

This feature allows the user to choose from two additional Base-Frequency conditions maximum for CPU P State Control. The options are **Base**, Config (Configuration) 1, and Config (Configuration) 2.

Dynamic SST-PP (Speed Select Technology-Performance Profile)

If this feature is set to Enable, the user will be able to configure Intel SST-PP features, including Base, Configuration 1, and Configuration 2 settings under various processor working conditions. The options are **Disable** and Enable.

Activate SST-BF (Speed Select Technology-Base Frequency)

Select Enable for Intel Speed Select Technology-Base Frequency support. The options are **Disable** and Enable.

Configure SST-BF (Speed Select Technology-Base Frequency) (Available when "Activate SST-BF " is set to Enable)

When this feature is set to Enable, the system BIOS will configure SST-BF High Priority Core settings so that system software does not have to configure these settings. The options are **Enable** and Disable.

EIST PSD Function (Available when "SpeedStep" is set to Enable)

Use this feature to configure the processor's P-State coordination settings. During a P-State, the voltage and frequency of the processor will be reduced when it is in the idle state. This makes the processor more energy-efficient, resulting in further energy gains. The options are **HW_ALL** and SW_ALL.

Turbo Mode (Available when "SpeedStep" is set to Enable)

Select Enable to allow the CPU to operate at the manufacturer-defined turbo speed by increasing CPU clock frequency. This feature is available when it is supported by the processors used in the system. The options are Disable and **Enable**.

CPU Flex Ratio Override (Available when supported by the CPU installed on the motherboard)

Select Enable to override the CPU Flex-Ratio setting, which is the minimum multiplier that allows the computer to clock. The options are Enable and **Disable**.

CPU Core Flex Ratio (Available when supported by the CPU installed on the motherboard and when "CPU Flex Ratio Override" is set to Enable)

Use this feature to configure the Core Ratio Multiplier settings for non-Turbo mode processors. The default setting is **23**.

►Hardware PM (Power Management) State Control (Available when "Power Technology" is set to Custom)**Hardware P-States**

If this feature is set to Disable, system hardware will choose a P-state setting for the system based on an OS request. If this feature is set to Native Mode, hardware will choose a P-state setting based on the OS guidance. If this feature is set to Native Mode with No Legacy Support, system hardware will choose a P-state setting independently without OS guidance. The options are **Disable**, Native Mode, Out of Band Mode, and Native Mode with No Legacy Support.

►CPU C State Control**Enable Monitor/MWAIT**

Select Enable to support Monitor and MWAIT, which are two instructions in Streaming SIMD Extension 3 (SSE3), to improve synchronization between multiple threads for CPU performance enhancement. The options are **Enable**, and Disable.

CPU C6 Report (Available when "Autonomous Core C-State" is set to Disable)

Select Enable to allow the BIOS to report the CPU C6 state (ACPI C3) to the operating system. During the CPU C6 state, power to all caches is turned off. The options are **Auto**, Enable, and Disable.

Enhanced Halt State (C1E) (Available when "Autonomous Core C-State" is set to Disable)

Select Enable to enable "Enhanced Halt State" support, which will significantly reduce the CPU's power consumption by minimizing CPU's clock cycles and reduce voltage during a "Halt State". The options are Disable and **Enable**.

►Package C State Control (Available when "Power Technology" is set to Custom)

Package C State

Use this feature to optimize and reduce CPU package power consumption in idle mode. Please note that the changes you've made in this setting will affect all CPU cores or the circuits of the entire system. The options are C0/C1 state, C2 state, C6 (non-Retention) state, C6 (Retention) state, No Limit, and **Auto**.

►CPU T State Control Available when "Power Technology" is set to Custom)

Software Controlled T-States

If this feature is set to Enable, CPU throttling will be controlled by the OS, which will reduce the speed of CPU. The options are Enable and **Disable**.

T-State Throttle Level (Available when "Software Controlled T-States" is set to Enable)

Select Enable to configure the on-die thermal throttling setting. The options are **Disable**, 6.25%, 12.5%, 18.75%, 25.0%, 31.25%, 37.5%, 43.75%, 50.0%, 56.25%, 62.5%, 68.75%, 75.0%, 81.25%, 87.5%, and 93.75%.

► Chipset Configuration

Warning: Setting the wrong values in the following items may cause the system to malfunction.

► North Bridge

This feature allows the user to configure Intel North Bridge parameters.

► UPI Configuration

► Uncore General Configuration

► Uncore General Configuration

This section allows the user to configure the following Uncore settings:

- Number of CPU
- Number of IIO
- Current UPI Link Speed
- Current UPI Link Frequency
- Global MMIO Low Base/Limit
- Global MMIO High Base/Limit
- PCIe Configuration Base/Size

Degrade Precedence

Use this feature to select the degrading precedence option for Ultra Path Interconnect (UPI) connections. Select Topology Precedent to degrade UPI features if system options are in conflict. Select Feature Precedent to degrade UPI topology if system options are in conflict. The options are **Topology Precedence** and Feature Precedence.

Degrade 4S Technology Precedence

Use this feature when the system can be degraded to use either 4S Full Connect topology or 4S Ring Link topology. The options are **4S Fully Connect (Single Link)** and 4S Ring (Dual Link).

Link Speed Mode

Use this feature to select the data transfer speed for UPI Link connections. The options are **Fast** and Slow.

Link Frequency Select

Use this feature to select the link frequency for UPI connections. The options are 9.6GB/s, 10.4GB/s, 11.2GB/s, **Auto**, and Use Per Link Setting.

Link L0p Enable

Select Enable for the system BIOS to enable Link L0p support which will allow the CPU to reduce the UPI links from full width to half width in the event when the CPU's workload is low in an attempt to save power. This feature is available for the system that uses Intel processors with UPI technology support. The options are **Disable**, Enable, and Auto.

 **Note:** You can change the performance settings for non-standard applications by using this parameter. It is recommended that the default settings be used for standard applications.

Link L1 Enable

Select Enable for the BIOS to activate Link L1 support which will power down the UPI links to save power when the system is idle. This feature is available for the system that uses Intel processors with UPI technology support. The options are **Disable**, Enable, and Auto.

 **Note:** Link L1 is an excellent feature for an idle system. L1 is used during Package C-States when its latency is hidden by other components during a wakeup.

UPI Failover Support

Select Enable to support UPI data failover features. The options are Disable, Enable, and **Auto**.

Directory Mode Enable

Select Enable to enable UPI failover support. Select Disable to disable failover support. Select Auto to allow the BIOS to select the proper setting automatically based on the SI compatibility. The options are Disable, Enable, and **Auto**.

XPT Remote Prefetch

Select Enable to support XPT (Extended Prediction Table) Remote Prefetch which will allow an LLC request to be duplicated and sent to an appropriate memory controller in a remote machine based on the recent LLC history to reduce latency. The options are Enable, Disable, and **Auto**.

KTI Prefetch

Select Enable for the KTI prefetcher to preload the L1 cache with data deemed relevant which will allow memory read to start earlier on a DDR bus in an effort to reduce latency. Select Auto for the KTI prefetcher to automatically preload the L1 cache with relevant data whenever is needed. The options are **Auto**, Enable, and Disable.

RdCur for XPT Prefetch

Select Enable for suppress_mem_rd_prefetch_rdcurl support. Select Disable to disable suppress_mem_rd_prefetch_rdcurl support. Select Auto to allow the BIOS to select the proper setting automatically based on the SI compatibility. The options are Enable, Disable, and **Auto**.

UPI VNA Credit Override

Use this feature to select the global UPI VNA Credit Override option. The options are Minimum, Per Link, and **Maximum**.

UPI Load Board for Failed Links

When this feature is set to Enable, UPI links will remain enabled for hardware continuous training despite of the previous failure. The options are **Disable** and Enable.

CPU SKU Type Mismatch Check

When this feature is set to Yes, the system will check if there is a mismatch on the SKU type of the processors used in the machine. The options are **Yes** and No.

Local/Remote Threshold

Use this feature to set the threshold for the Interrupt Request (IRQ) signals, which handle hardware interruptions. The options are Disable, **Auto**, Low, Medium, and High.

Loctorem (Local to Remote) Thresholds Normal

Select Auto for the BIOS to automatically select the threshold settings for local to remote IRQ signals under normal operations. The options are Disable, **Auto**, Low, Medium, and High.

Loctorem (Local to Remote) Thresholds Empty

Select Auto for the BIOS to automatically select the threshold empty settings for local to remote IRQ signals. The options are Disable, **Auto**, Low, Medium, and High.

TSC (Time Stamp Counter) Sync (Synchronization) Support

When this feature is set to Auto, time-stamp counters will be automatically synchronized among all processors. The options are Enable, Disable, and **Auto**.

IO Directory Cache (IODC)

Select Enable for the IODC (I/O Directory Cache) to generate snoops instead of generating memory lockups for remote IIO (InvlToM) and/or WCiLF (Cores). Select Auto for the IODC to generate snoops (instead of memory lockups) for WCiLF (Cores). The options are Disable, **Auto**, Enable for Remote InvltoM Hybrid Push, InvltoM AllocFlow, Enable for Remote InvltoM Hybrid AllocNonAlloc, and Enable for Remote InvltoM and Remote WViLF.

Legacy VGA Socket

Enter a value between 0 to 7 to be used as the legal VGA range for a CPU socket. The default setting is **0**.

SplitLock

Select Enable to enable Split Lock support. The options are Enable, **Disable**, and Auto.

SNC (Sub NUMA)

Select Enable to use "Sub NUMA Clustering" (SNC), which supports full SNC (2-cluster) interleave and 1-way IMC interleave. Select Auto for 1-cluster or 2-cluster support depending on the status of IMC (Integrated Memory Controller) Interleaving. The options are **Disable**, Enable SNC2 (2-clusters), Enable SNC4 (4-clusters).

XPT Prefetch

Select Enable to support XPT (Extended Prediction Table) Prefetch which will allow an LLC request to be duplicated and sent to an appropriate memory controller based on the recent LLC history to reduce latency. The options are Enable, Disable, and **Auto**.

Snoop Throttle Configuration

Use this feature to set the level of snoop throttle for the PCH, which will determine how much speed to decrease in operation when the system is in the snoop state. The options are Disabled, Low, Medium, High, and **Auto**.

Legacy VGA Stack

Use this feature to enter a value between 0 to 7 as the legacy VGA range for the CPU stack. The default setting is **0**.

PCIe Remote P2P (Peer-to-Peer) Relaxed Ordering

Select Disable to support PCIe remote peer-to-peer relaxed writing ordering, which will allow hardware to enforce peer-to-peer write ordering. The options are Enable and **Disable**.

Uncore Debug Print Level

Use this feature to set the uncore debug print level for the CPU. The options are Fatal, Warning, Summary, Detail, and **All**.

Stale AtoS (A to S)

The in-memory directory has three states: I, A, and S states. The I (-invalid) state indicates that the data is clean and does not exist in the cache of any other sockets. The A (-snoop All) state indicates that the data may exist in another socket in an exclusive or modified state. The S state (-Shared) indicates that the data is clean and may be shared in the caches across one or more sockets. When the system is performing "read" on the memory and if the directory line is in A state, we must snoop all other sockets because another socket may have the line in a modified state. If this is the case, a "snoop" will return the modified data. However, it may be the case that a line "reads" in an A state, and all the snoops come back with a "miss". This can happen if another socket reads the line earlier and then has silently dropped it from its cache without modifying it. If "Stale AtoS" is enabled, a line will transition to the S state when the line in the A state returns only snoop misses. That way, subsequent reads to the line will encounter it in the S state and will not have to snoop, saving the latency and snoop bandwidth. Stale "AtoS" may be beneficial in a workload where there are many cross-socket reads. The options are Disable, Enable, and **Auto**.

LLC Dead Line Alloc

Select Enable to opportunistically fill the deadlines in the LLC. The options are **Enable**, Disable, and Auto.

►Uncore Per Socket Configuration

►CPU 0

►CPU 0 UPI Port 0/CPU 0 UPI Port 1/CPU 0 UPI Port 2

CPU 0 UPI Port 0/CPU 0 UPI Port 1/CPU 0 UPI Port 2

Link Disable

Select Yes to disable CPU 0 UPI Port 0 support for a UPI port specified by the user. The options are **No** and Yes.

Current UPI Link Speed

Use this feature to set the current UPI link speed for a UPI port specified by the user. The options are 9.6GB/s, 11.2GB/s, and **Auto**.

Bus Resources Allocation Ratio

Use this feature to set the bus resource allocation ratio, ranging between 0 to 8. The default setting is **1**.

►CPU 1

►CPU 1 UPI Port 0/CPU 1 UPI Port 1/CPU 1 UPI Port 2

CPU 1 UPI Port 0/CPU 1 UPI Port 1/CPU 1 UPI Port 2

Link Disable

Select Yes to disable CPU 0 UPI Port 0 support for a UPI port specified by the user. The options are **No** and Yes.

Current UPI Link Speed

Use this feature to set the current UPI link speed for a UPI port specified by the user. The options are 9.6GB/s, 11.2GB/s, and **Auto**.

Bus Resources Allocation Ratio

Use this feature to set the bus resource allocation ratio, ranging between 0 to 8. The default setting is 1.

►Memory Configuration

This feature allows the user to configure the Integrated Memory Controller (iMC) settings.

Enforce POR (Plan of Record)

Select POR to enforce POR restrictions for DDR4 memory frequency and voltage programming. The options are **POR** and Disable.

PPR Type

Post Package Repair (PPR) is a new feature available for the DDR4 Technology. PPR provides additional spare capacity within a DDR4 DRAM module that is used to replace faulty cell areas detected during system boot. PPR offers two types of memory repairs. Soft Post Package Repair (sPPR) provides a quick, temporary fix on a raw element in a bank group of a DDR4 DRAM device, while hard Post Package Repair (hPPR) will take a longer time to provide a permanent repair on a raw element. The options are Soft PPR, **Hard PPR**, and PPR Disabled.

Memory Frequency

Use this feature to set the maximum memory frequency for onboard memory modules. The options are **Auto**, 2133, 2200, 2400, 2600, 2666, 2800, 2933, 3000, and 3200. (**Note:** Maximum memory frequency is dependent on the CPU SKU.)

Data Scrambling for DDR4

Select Enable to enable data scrambling for DDR4 modules to enhance memory data security. Select Auto to use the Memory Reference Code (MRC) defaulting setting for DDR4 data scrambling. The options are **Enable** and Disable.

Enable ADR

Select Enable for ADR (Async DIMM Module Self-Refresh) support to enhance memory performance. The options are Disable and **Enable**.

Data Scrambling for PMem (Available when Intel PMem Memory is detected in the system and when "Enabled ADR" is set to Enable)

Select Enable to enable data scrambling for PMem memory modules to enhance memory data security. Select Auto to use the Memory Reference Code (MRC) defaulting setting for DIMM memory data scrambling. The options are **Enable** and Disable.

Legacy ADR Mode (Available when "Enabled ADR" is set to Enable)

Select Enable to support Legacy ADR (Async DIMM Module Self-Refresh) mode to enhance memory performance. The options are Enable and **Disable**.

Erase-Arm NVDIMM modules (Available when "Enabled ADR" is set to Enable, and when NVDIMMs are detected/installed in the system)

If this feature is set to Enable, the function that "arms" the NVM for safe operations in the event of a power loss will be removed. The options are **Enable** and Disable.

Restore NVDIMM Modules (Available when "Enabled ADR" is set to Enable, and when NVDIMMs are detected/installed in the system)

Select Enable to automatically restore the functionality and the features of NVDIMM modules. The options are **Enable** and Disable.

Interleave NVDIMM Modules (Available when "Enabled ADR" is set to Enable, and when NVDIMMs are detected/installed in the system)

If this feature is set to Enable, all onboard NVDIMM modules will be configured together as a group for the interleave mode. If this item is set to Disable, individual NVDIMM module modules will be configured separately for the interleave mode. The options are Enable and **Disable**.

Reset Trigger ADR (Async DIMM Module Self-Refresh) (Available when "Enabled ADR" is set to Enable, and when NVDIMMs are detected/installed in the system)

Upon a system power loss, an ADR sequence will be triggered to allow ADR to flash the write-protected data buffers in the memory controller and place the DRAM memory in self-refresh mode. When this process is complete, the NVDIMM module will then take control of the DRAM memory and transfer the contents to the onboard Flash memory. After the transfer is complete, the NVDIMM module goes into a zero power state. The data transferred will be retained for the duration specified by the flash memory. The options are Enable and **Disable**.

S5 Trigger ADR (Available when "Enabled ADR" is set to Enable, and when NVDIMMs are detected/installed in the system)

Select Enabled to support S5-Triggered ADR to enhance system performance and data integrity. The options are **Disable** and Enable.

2X Refresh Enable

Select Enable for memory 2X refresh support to enhance memory performance. The options are Disable, Enable, and **Auto**.

►Memory Topology

This item displays the information of onboard memory modules as detected by the BIOS, for example:

- Socket0.ChA.DIMM0: 2934MT/s Micron DRx8 32GB RDIMM
- Socket0.ChB.DIMM0: 2934MT/s Micron DRx8 32GB RDIMM
- Socket0.ChC.DIMM0: 2934MT/s Micron DRx8 32GB RDIMM
- Socket0.ChD.DIMM0: 2934MT/s Micron DRx8 32GB RDIMM
- Socket0.ChE.DIMM0: 2934MT/s Micron DRx8 32GB RDIMM
- Socket0.ChF.DIMM0: 2934MT/s Micron DRx8 32GB RDIMM
- Socket0.ChG.DIMM0: 2934MT/s Micron DRx8 32GB RDIMM
- Socket0.ChH.DIMM0: 2934MT/s Micron DRx8 32GB RDIMM
- Socket1.ChA.DIMM0: 2934MT/s Micron DRx8 32GB RDIMM
- Socket1.ChB.DIMM0: 2934MT/s Micron DRx8 32GB RDIMM
- Socket1.ChC.DIMM0: 2934MT/s Micron DRx8 32GB RDIMM
- Socket1.ChD.DIMM0: 2934MT/s Micron DRx8 32GB RDIMM
- Socket1.ChE.DIMM0: 2934MT/s Micron DRx8 32GB RDIMM
- Socket1.ChF.DIMM0: 2934MT/s Micron DRx8 32GB RDIMM
- Socket1.ChG.DIMM0: 2934MT/s Micron DRx8 32GB RDIMM
- Socket1.ChH.DIMM0: 2934MT/s Micron DRx8 32GB RDIMM

►Memory RAS (Reliability_Availability_Serviceability) Configuration

Use this submenu to configure the following Memory RAS settings.

Enable Pcode WA (Workaround) for SAI (Security Attribute of the Initiator) PG (Policy Group)

Pcode, a register transfer language designed for reverse engineering, translates individual processor instructions into a sequence of Pcode operations in order to facilitate the construction of data-flow graphs and disassembling of processor instructions for machine application. Select Enabled to allow Pcode to work around the SAI group policy to achieve a solution with a next-step instruction. The options are **Disabled** and Enabled.

Mirror Mode (Unavailable when "UEFI ARM Mirror" below is set to Enabled and "ADDDC Sparing" below is set to Disabled)

Use this feature to configure the mirror mode settings for all 1LM/2LM memory modules installed in the system which will create a duplicate copy of data stored in the memory to increase memory security, but it will reduce the memory capacity into half. The options are **Disabled** and Full Mirror Mode.

UEFI ARM Mirror (Only available when "Mirror Mode" is set to Disabled and "ADDDC Sparing" is set to Disabled)

Select Enabled to mimic behavior of UEFI-based ARM (Address Range Mirror) with setup options to increase memory security, but it will reduce the memory capacity into half. The options are **Disabled** and Enabled.

UEFI ARM Mirror Percentage (Available if "UEFI ARM Mirror" is set to Enabled)

Use this feature to set the percentage of memory space to be used for UEFI ARM mirroring for memory security enhancement.

Correctable Error Threshold

This feature allows the user to enter the threshold value for correctable memory errors. The default setting is **512**.

Partial Cache Line Sparing (PCLS)

Select Enabled to support partial cache line sparing, which will allow partial of data contained in a cache line to be copied in the cache memory for safe-keeping/data security. The options are **Disabled** and Enabled.

ADDDC (Adaptive Double Device Data Correction) Sparing (Available if "UEFI ARM Mirror" is set to Enabled)

Select Enable for Adaptive Double Device Data Correction (ADDDC) support, which will not only provide memory error checking and correction but will also prevent the system from issuing a performance penalty before a device fails. Please note that virtual lockstep mode will only start to work for ADDDC after a faulty DRAM module is spared. The options are Enabled and **Disabled**.

Patrol Scrub

Patrol Scrubbing is a process that allows the CPU to correct correctable memory errors detected in a memory module and send the corrections to the requestor (the original source). When this feature is set to Enable, the IO hub will read and write back one cache line every 16K cycles if there is no delay caused by internal processing. By using this method, roughly 64 GB of memory behind the IO hub will be scrubbed every day. The options are **Enabled**, Disabled, and Enable at End of POST (Power_On Self Test).

► IIO Configuration

► Socket0 Configuration/Socket1 Configuration

IOU0 (IIO PCIe Port 1)

Use this feature to configure the PCIe Bifurcation setting for a PCIe port specified by the user. The options are x4x4x4x4, x4x4x8, x8x4x4, x8x8, x16, and **Auto**.

IOU1 (IIO PCIe Port 2)

Use this feature to configure the PCIe Bifurcation setting for a PCIe port specified by the user. The options are x4x4x4x4, x4x4x8, x8x4x4, x8x8, x16, and **Auto**.

IOU1 (IIO PCIe Port 3)

Use this feature to configure the PCIe Bifurcation setting for a PCIe port specified by the user. The options are x4x4x4x4, x4x4x8, x8x4x4, x8x8, x16, and **Auto**.

IOU3 (IIO PCIe Port 4)

Use this feature to configure the PCIe Bifurcation setting for a PCIe port specified by the user. The options are x4x4x4x4, x4x4x8, x8x4x4, x8x8, x16, and **Auto**.

IOU4 (IIO PCIe Port 5)

Use this feature to configure the PCIe Bifurcation setting for a PCIe port specified by the user. The options are x4x4x4x4, x4x4x8, x8x4x4, x8x8, x16, and **Auto**.

► Port 0/DMI

Link Speed

Use this feature to configure the link speed of a PCIe device installed in Port 0 or DMI port. The options are **Auto**, Gen 1 (2.5 GT/s), Gen 2 (5 GT/s), and Gen 3 (8 GT/s).

The following information will be displayed:

- PCIe Port Link Status
- PCIe Port Link Max
- PCIe Port Link Speed

DMI Port MPSS (Maximum Payload Size Support) (Available for "Socket Configuration" Only)

Use this feature to set the maximum payload size support in the PCIe Device Capabilities Register for the device installed in the DMI port. The options are **Auto**, 128B, and 256B.

►Port 1A/Port 2A/Port 4A/Port 4C/Port 4D/Port 5A/Port 5B/Port 5C/Port 5D**Link Speed**

Use this feature to configure the link speed of a PCIe device installed in Port 0 or DMI port. The options are **Auto**, Gen 1 (Generation 1) (2.5 GT/s), Gen 2 (Generation 2) (5 GT/s), Gen 3 (Generation 3) (8 GT/s), and Gen 4 (Generation 3) (16 GT/s).

The following information will be displayed:

- PCIe Port Link Status
- PCIe Port Link Max
- PCIe Port Link Speed

PCIe Port Max (Maximum) Payload Size

Use this feature to set the maximum payload size in the PCIe Device Capabilities Register for the device installed in the DMI port. The options are **Auto**, 128B, 256B and 512B.

►Socket1 Configuration**IOU0 (IIO PCIe Port 1)**

Use this feature to configure the PCIe Bifurcation setting for a PCIe port specified by the user. The options are x4x4x4x4, x4x4x8, x8x4x4, x8x8, x16, and **Auto**.

IOU1 (IIO PCIe Port 2)

Use this feature to configure the PCIe Bifurcation setting for a PCIe port specified by the user. The options are x4x4x4x4, x4x4x8, x8x4x4, x8x8, x16, and **Auto**.

IOU1 (IIO PCIe Port 3)

Use this feature to configure the PCIe Bifurcation setting for a PCIe port specified by the user. The options are x4x4x4x4, x4x4x8, x8x4x4, x8x8, x16, and **Auto**.

IOU3 (IIO PCIe Port 4)

Use this feature to configure the PCIe Bifurcation setting for a PCIe port specified by the user. The options are **x4x4x4x4**, x4x4x8, x8x4x4, x8x8, x16, and **Auto**.

IOU4 (IIO PCIe Port 5)

Use this feature to configure the PCIe Bifurcation setting for a PCIe port specified by the user. The options are x4x4x4x4, **x4x4x8**, x8x4x4, x8x8, x16, and **Auto**.

►IOAT Configuration

Disable TPH

TPH (TLP Processing Hint) is used for data-tagging with a destination ID and a few important attributes. It can send critical data to a particular cache without writing through to the memory. Select No for TLP Processing Hint support, which will allow a "TLP request" to provide "hints" to help optimize the processing of each transaction occurred in the target memory space. The options are Yes and **No**.

Prioritize TPH (TLP Processing Hint)

Select Enable to prioritize the TPL requests that will allow the "hints" to be sent to help facilitate and optimize the processing of certain transactions in the system memory. The options are Enable and **Disable**.

Relaxed Ordering

Select Yes to allow certain transactions to be processed and completed before other transactions that have already been enqueued. The options are Yes and **No**.

►Intel VT for Directed I/O (VT-d)

Intel® VT for Directed I/O (VT-d)

Select Yes to use the Intel Virtualization Technology support for Direct I/O VT-d by reporting the I/O device assignments to the VMM (Virtual Machine Monitor) through the DMAR ACPI tables. This feature offers fully-protected I/O resource sharing across Intel platforms, providing greater reliability, security and availability in networking and data-sharing. The options are **Yes** and No.

Interrupt Remapping (Available when "Intel® VT for Directed I/O (VT-d)" is set to Yes)

If this feature is set to Yes, I/O DMA transfer remapping and device-generated interrupts will be supported. The options are **Auto**, Yes, and No.

►Intel® VMD (Volume Management Device) Technology

This section describes the configuration settings for the Intel VMD Technology.

Note 1. After you've enabled VMD in the BIOS on a PCIe slot, this PCIe slot will be dedicated for VMD use only, and it will no longer support any PCIe device. To re-activate this slot for PCIe use, please disable VMD in the BIOS.

Note 2. PCIe slots and naming can differ depending on the PCIe devices installed on your motherboard.

►Intel® VMD for Volume Management Device on Socket 0

VMD Configuration for IOU 4

Enable/Disable VMD

Select Enable to enable Intel Volume Management Device Technology support for the root port specified by the user. The options are Enable and **Disable**.

**If Enable/Disable VMD is set to Enable to a port specified by the user, the following items will display for the port selected.*

VMD Port A/ VMD Port B/ VMD Port C/ VMD Port D (Available for onboard NVMe ports only)

Select Enable to enable Intel Volume Management Device Technology support for the (M.2 HC S-SATA4/5) root port. The options are Enable and **Disable**.

Hot Plug Capable

Select Enable to enable Hot Plug support for the root ports specified by the user, which will allow the user to change the devices on those root ports without shutting down the system. The options are **Enable** and Disable.

CfgBar Size

Use this feature to set the VMD Configuration Bar size (in bits. Minimum is 20 bits and maximum is 27 bits.) The default setting is **25 (bits)**.

CfgBar Attribute

Use this feature to set the VMD Configuration Bar attribute (e.g. 64-bit or Prefetchable.) The options are 32-bit non-prefetchable, 64-bit non-prefetchable, and **64-bit prefetchable**.

MemBar1 Size

Use this feature to set the VMD Memory Bar1 size (in bits. Minimum is 20 bits.) The default setting is **25 (bits)**.

MemBar1 Attribute

Use this feature to set the VMD Memory Bar1 attribute (e.g. 64-bit or Prefetchable.) The options are **32-bit non-prefetchable**, 64-bit non-prefetchable, and 64-bit prefetchable.

MemBar2 Size

Use this feature to set the VMD Memory Bar2 size (in bits. Minimum is 20 bits.) The default setting is **20 (bits)**

MemBar2 Attribute

Use this feature to set the VMD Memory Bar2 attribute (e.g. 64-bit or Prefetchable.) The options are 32-bit non-prefetchable, **64-bit non-prefetchable**, and 64-bit prefetchable.

IIO eDPC (Enhanced Downstream Port Containment) Support

Use this feature to configure the setting for IIO Enhanced Downstream Port Containment (eDPC) support for your system in an effort to improve the error containment capacity within the PCIe subsystem when an uncorrected error is detected either at the root port or at the switch downstream port. Select Disable to disable IIO eDPC support. Select On Fatal Error to enable IIO eDPC support in your system when a fatal error occurs. Select On Fatal and Non-Fatal Error to enable IIO eDPC support when an error, fatal or non-fatal, has occurred. The options are **On Fatal Error**, On Fatal and Non-Fatal Errors, and Disable.

**If this feature is set to On Fatal Error/On Fatal and Non-Fatal Errors, the following features will be displayed:*

IIO eDPC Interrupt (Available when "IIO eDPC Support" is set to On Fatal Error/On Fatal and Non-Fatal Errors)

Select Enable to enable IIO eDPC Interrupt support. The options are **Enabled** and Disable.

IIO eDPC ERR_COR (Error Correction) Message (Available when "IIO eDPC Support" is set to On Fatal Error/On Fatal and Non-Fatal Errors)

If this feature is set to Enable, an IIO eDPC error correction message will be displayed. The options are **Enabled** and Disable.

► South Bridge

The following South Bridge information will display:

- USB Module Version
- USB Devices

Legacy USB Support

Select Enabled to support onboard legacy USB devices. Select Auto to disable legacy support if there are no legacy USB devices present. Select Disable to have all USB devices available for EFI applications only. The options are **Enabled**, Disabled and Auto.

XHCI Hand-Off

This is a work-around solution for operating systems that do not support XHCI (Extensible Host Controller Interface) hand-off. The XHCI ownership change should be claimed by the XHCI driver. The options are Disabled and **Enabled**.

Port 60/64 Emulation

Select Enabled for I/O port 60h/64h emulation support, which in turn, will provide complete legacy USB keyboard support for the operating systems that do not support legacy USB devices. The options are Disabled and **Enabled**.

Install Windows 7 USB Support (Available when the Windows OS is installed)

Select Enabled to install Windows 7 and the XHCI drivers for USB keyboard/mouse support. After you've installed the Windows 7 and XHCI drivers, be sure to set this feature to "Disabled" (default). The options are **Disabled** and Enabled.

PCIe PLL SSC

Select Enabled for PCH PCIe Spread Spectrum Clocking support, which will allow the BIOS to monitor and attempt to reduce the level of electromagnetic interference caused by the components whenever needed. The options are Enabled and **Disabled**.

Port 61h Bit-4 Emulation

Select Enabled for I/O Port 61h-Bit 4 emulation support to enhance system performance. The options are Enabled and **Disabled**.

► Server ME (Management Engine) Configuration

This feature displays the following Server ME configuration settings:

General ME Configuration

- Oper. (Operation) Firmware Version
- Backup Firmware Version
- Recovery Firmware Version
- ME Firmware Status #1/ME Firmware Status #2
 - Current State
 - Error Code

► SATA Configuration

PCH SATA Configuration

SATA Controller

This feature enables or disables the onboard SATA controller supported by the Intel PCH chip. The options are **Enable** and **Disable**.

Configure SATA as (Available when "SATA Controller" is set to Enable)

Select AHCI to configure a SATA drive specified by the user as an AHCI drive. Select RAID to configure a SATA drive specified by the user as a RAID drive. The options are **AHCI** and **RAID**.

SATA RSTe Boot Info (Available when "Configure SATA as" is set to RAID)

Select Enable for full int13h support which will allow the system to boot up using a device attached to the SATA controller. The options are **Disable** and **Enable**.

 **Note:** For this feature to work properly, please set the CSM Storage OPRM policy to Legacy.)

Support Aggressive Link Power Management

When this feature is set to Enable, the SATA AHCI controller manages the power use of the SATA link. The controller will put the link in a low power mode during an extended period of I/O inactivity, and will return the link to an active state when I/O activity resumes. The options are **Enable** and **Disable**.

SATA RAID Option ROM/UEFI Driver (Available when "Configure SATA as" is set to RAID)

Select EFI to load the EFI driver for system boot. Select Legacy to load a legacy driver for system boot. The options are Disable, **EFI**, and Legacy.

SATA Port 0 - SATA Port 7**Hot Plug**

Select Enable to support Hot-plugging for the device installed on a selected SATA port which will allow the user to replace the device installed in the slot without shutting down the system. The options are **Enable** and Disable.

Spin Up Device

Select Enable for Staggered Spin Up support which will allow the SATA devices specified by the user to spin up one at a time at boot up in an effort to prevent all hard drive disks from spinning up at the same time, causing a power surge. The options are Enable and **Disable**.

SATA Device Type

Use this feature to specify if the device installed on the SATA port specified by the user should be connected to a Solid State drive or a Hard Disk Drive. The options are **Hard Disk Drive** and Solid State Drive.

►sSATA Configuration

PCH sSATA Configuration

sSATA Controller

This feature enables or disables the onboard sSATA controller supported by the Intel PCH. The options are **Enable** and **Disable**.

Configure sSATA as (Available when "sSATA Controller" is set to Enable)

Select AHCI to configure an sSATA drive specified by the user as an AHCI drive. Select RAID to configure an sSATA drive specified by the user as a RAID drive. The options are **AHCI** and **RAID**.

sSATA RSTe Boot Info (Available when "Configure sSATA as" is set to RAID)

Select Enable for full int13h support which will allow the system to boot using a device attached to the SATA controller. The options are **Disable** and **Enable**.

Note: For this feature to work properly, please set the CSM Storage OPRM policy to Legacy.

Support Aggressive Link Power Management

When this feature is set to Enable, the sSATA AHCI controller manages the power use of the sSATA link. The controller will put the link in a low power mode during an extended period of I/O inactivity, and will return the link to an active state when I/O activity resumes. The options are **Disable** and **Enable**.

sSATA RAID Option ROM/UEFI Driver (Available when "Configure sSATA as" is set to RAID)

Select EFI to load the EFI driver for system boot. Select Legacy to load a legacy driver for system boot. The options are Disable, **EFI**, and Legacy.

sSATA Port 0 - sSATA Port 5**Hot Plug**

Select Enable to support Hot-plugging for the device installed on an sSATA port specified by the user which will allow the user to replace the device installed in the slot without shutting down the system. The options are **Enable** and Disabled.

Spin Up Device

Select Enable for Staggered Spin Up support which will allow the SATA devices specified by the user to spin up one at a time at bootup preventing all hard drive disks from spinning up at the same time, causing a power surge. The options are Enable and **Disable**. The options are Enable and **Disable**.

sSATA Device Type

Use this feature to specify if the device installed on the sSATA port specified by the user should be connected to a Solid State drive or a Hard Disk Drive. The options are **Hard Disk Drive** and Solid State Drive.

►PCIe/PCI/PnP Configuration

The following PCI information will be displayed:

PCI Bus Driver Version

PCI Devices Common Settings

Above 4G Decoding (Available if the system supports 64-bit PCI decoding)

Select Enabled to decode a PCI device that supports 64-bit in the space above 4G Address. The options are **Enabled** and Disabled.

SR-IOV Support (Available if the system supports Single-Root Virtualization)

Select Enabled for Single-Root IO Virtualization support. The options are **Enabled** and Disabled.

MMIOHBase

Use this feature to select the base memory size according to memory-address mapping for the IO hub. The options are 56T, 40T, **32T**, 24T, 16T, 4T, 2T, 1T, 512 G.

MMIO High Granularity Size

Use this feature to select the high memory size according to memory-address mapping for the IO hub. The options are 1G, 4G, 16G, **64G**, 256G, and 1024G.

Maximum Read Request

Select Auto for the system BIOS to automatically set the maximum size for a read request for a PCIe device to enhance system performance. The options are **Auto**, 128 Bytes, 256 Bytes, 512 Bytes, 1024 Bytes, 2048 Bytes, and 4096 Bytes.

MMCFG Base

This feature determines how the lowest MMCFG (Memory-Mapped Configuration) base is assigned to onboard PCI devices. The options are 1G, 1.5G, 1.75G, **2G**, 2.25G, and 3G.

VGA Priority

Use this feature to select the graphics device to be used as the primary video display for system boot. The options are Auto, **Onboard** and Offboard.

PCI Devices Option ROM Setting**Onboard NVME 1 Option ROM/Onboard NVME 2 Option ROM**

Select EFI to allow the user to boot the computer using an EFI (Extensible Firmware Interface) device installed on the NVME port specified by the user. Select Legacy to allow the user to boot the computer using a legacy device installed on the NVME port specified by the user. The options are Disabled, Legacy, and **EFI**.

CPU1 Slot 1 PCIe x8 OPRON/CPU1 Slot 2 PCIe x16 OPRON

Select EFI to allow the user to boot the computer using an EFI (Extensible Firmware Interface) device installed on the PCIe slot specified by the user. Select Legacy to boot the computer using a legacy device installed on the PCIe slot specified by the user. The options are Disabled, Legacy, and **EFI**.

Onboard Video OPRON

Select EFI to allow the user to boot the computer using an EFI (Extensible Firmware Interface) device installed on the video port. Select Legacy to boot the computer using a legacy device installed on the video port. The options are Do not launch, EFI, and **Legacy**.

Onboard LAN Device

Select Enabled to enable onboard LAN devices. Select Auto for the system BIOS to automatically enable the onboard LAN devices when onboard devices are detected. The options are **Auto**, Enabled and Disabled.

Onboard LAN1 Option ROM

Select EFI to boot up your computer using an EFI (Extensible Firmware Interface) device installed on the LAN port 1. Select Legacy to boot up your computer using a Legacy device installed on the LAN port 1. The default setting is Disabled, Legacy, and **EFI**.

Onboard LAN2 Option ROM

Select EFI to boot up your computer using an EFI (Extensible Firmware Interface) device installed on the LAN port 2. Select Legacy to boot up your computer using a Legacy device installed on the LAN port 2. The default setting is Legacy, EFI, and **Disabled**.

► Super IO Configuration

Super IO Chip AST2600

► Serial Port 1 Configuration

Serial Port

Select Enabled to enable Serial Port 1. The options are **Enabled** and Disabled.

Device Settings (Available when "Serial Port 1" is set to Enabled)

This feature displays the base I/O port address and the Interrupt Request address of Serial Port 1.

Change Settings (Available when "Serial Port 1" is set to Enabled)

This feature specifies the base I/O port address and the Interrupt Request address of Serial Port 1. Select **Auto** for the BIOS to automatically assign the base I/O and IRQ address to Serial Port 1. The options for Serial Port 1 are **Auto**, (IO=3F8h; IRQ=4), (IO=3F8h; IRQ=3, 4, 5, 6, 7, 9, 10, 11, 12;), (IO=2F8h; IRQ=3, 4, 5, 6, 7, 9, 10, 11, 12;), (IO=3E8h; IRQ=3, 4, 5, 6, 7, 9, 10, 11, 12;) and (IO=2E8h; IRQ=3, 4, 5, 6, 7, 9, 10, 11, 12).

► Serial Port 2 Configuration

Serial Port

Select Enabled to enable Serial Port 2. The options are **Enabled** and Disabled.

Device Settings (Available when "Serial Port 2" is set to Enabled)

This feature displays the base I/O port address and the Interrupt Request address of Serial Port 2.

Change Settings (Available when "Serial Port 2" is set to Enabled)

This feature specifies the base I/O port address and the Interrupt Request address of Serial Port 2. Select Auto for the BIOS to automatically assign the base I/O and IRQ address to Serial Port 2. The options for SOL are **Auto**, (IO=2F8h; IRQ=3), (IO=3F8h; IRQ=3, 4, 5, 6, 7, 9, 10, 11, 12;), (IO=2F8h; IRQ=3, 4, 5, 6, 7, 9, 10, 11, 12;), (IO=3E8h; IRQ=3, 4, 5, 6, 7, 9, 10, 11, 12;), and (IO=2E8h; IRQ=3, 4, 5, 6, 7, 9, 10, 11, 12).

Serial Port 2 Attribute

Select SOL to use Serial Port 2 as a Serial_Over_LAN (SOL) port for console redirection. The options are COM and **SOL**.

► Serial Port Console Redirection

COM 1

Console Redirection

Select Enabled to enable COM Port 1 for Console Redirection, which will allow a client machine to be connected to a host machine at a remote site for networking. The options are Enabled and **Disabled**.

If the item above is set to Enabled, the following items will become available for configuration:

COM 1

► Console Redirection Settings (for COM 1)

Terminal Type

Use this feature to select the target terminal emulation type for Console Redirection. Select VT100 to use the ASCII Character set. Select VT100+ to add color and function key support. Select ANSI to use the Extended ASCII Character Set. Select VT-UTF8 to use UTF8 encoding to map Unicode characters into one or more bytes. The options are ANSI, VT100, **VT100+**, and VT-UTF8.

Bits Per second

Use this feature to set the transmission speed for a serial port used in Console Redirection. Make sure that the same speed is used in the host computer and the client computer. A lower transmission speed may be required for long and busy lines. The options are 9600, 19200, 38400, 57600 and **115200** (bits per second).

Data Bits

Use this feature to set the data transmission size for Console Redirection. The options are 7 (Bits) and **8 (Bits)**.

Parity

A parity bit can be sent along with regular data bits to detect data transmission errors. Select Even if the parity bit is set to 0, and the number of 1's in data bits is even. Select Odd if the parity bit is set to 0, and the number of 1's in data bits is odd. Select None if you do not want to send a parity bit with your data bits in transmission. Select Mark to add a mark as a parity bit to be sent along with the data bits. Select Space to add a Space as a parity bit to be sent with your data bits. The options are **None**, Even, Odd, Mark, and Space.

Stop Bits

A stop bit indicates the end of a serial data packet. Select 1 Stop Bit for standard serial data communication. Select 2 Stop Bits if slower devices are used. The options are **1** and 2.

Flow Control

Use this feature to set the flow control for Console Redirection to prevent data loss caused by buffer overflow. Send a "Stop" signal to stop sending data when the receiving buffer is full. Send a "Start" signal to start sending data when the receiving buffer is empty. The options are **None** and Hardware RTS/CTS.

VT-UTF8 Combo Key Support

Select Enabled to enable VT-UTF8 Combination Key support for ANSI/VT100 terminals. The options are **Enabled** and Disabled.

Recorder Mode

Select Enabled to capture the data displayed on a terminal and send it as text messages to a remote server. The options are **Disabled** and Enabled.

Resolution 100x31

Select Enabled for extended-terminal resolution support. The options are Disabled and **Enabled**.

Putty KeyPad

This feature selects Function Keys and KeyPad settings for Putty, which is a terminal emulator designed for the Windows OS. The options are **VT100**, LINUX, XTERMR6, SCO, ESCN, and VT400.

COM2/SOL (Serial-Over-LAN)

Console Redirection (for COM2/SOL)

Select Enabled to use the SOL port for Console Redirection. The options are **Enabled** and Disabled.

If the feature above is set to Enabled, the following items will become available for configuration:

►Console Redirection Settings (for COM2/SOL)

Use this feature to specify how the host computer will exchange data with the client computer, which is the remote computer used by the user.

Terminal Type

Use this feature to select the target terminal emulation type for Console Redirection. Select VT100 to use the ASCII Character set. Select VT100+ to add color and function key support. Select ANSI to use the Extended ASCII Character Set. Select VT-UTF8 to use UTF8 encoding to map Unicode characters into one or more bytes. The options are ANSI, VT100, **VT100+**, and VT-UTF8.

Bits Per second

Use this feature to set the transmission speed for a serial port used in Console Redirection. Make sure that the same speed is used in the host computer and the client computer. A lower transmission speed may be required for long and busy lines. The options are 9600, 19200, 38400, 57600 and **115200** (bits per second).

Data Bits

Use this feature to set the data transmission size for Console Redirection. The options are 7 (Bits) and **8 (Bits)**.

Parity

A parity bit can be sent along with regular data bits to detect data transmission errors. Select Even if the parity bit is set to 0, and the number of 1's in data bits is even. Select Odd if the parity bit is set to 0, and the number of 1's in data bits is odd. Select None if you do not want to send a parity bit with your data bits in transmission. Select Mark to add a mark as a parity bit to be sent along with the data bits. Select Space to add a Space as a parity bit to be sent with your data bits. The options are **None**, Even, Odd, Mark and Space.

Stop Bits

A stop bit indicates the end of a serial data packet. Select 1 Stop Bit for standard serial data communication. Select 2 Stop Bits if slower devices are used. The options are **1** and 2.

Flow Control

Use this feature to set the flow control for Console Redirection to prevent data loss caused by buffer overflow. Send a "Stop" signal to stop sending data when the receiving buffer is full. Send a "Start" signal to start data-sending when the receiving buffer is empty. The options are **None** and Hardware RTS/CTS.

VT-UTF8 Combo Key Support

Select Enabled to enable VT-UTF8 Combination Key support for ANSI/VT100 terminals. The options are **Enabled** and Disabled.

Recorder Mode

Select Enabled to capture the data displayed on a terminal and send it as text messages to a remote server. The options are **Disabled** and Enabled.

Resolution 100x31

Select Enabled for extended-terminal resolution support. The options are Disabled and **Enabled**.

Putty KeyPad

This feature selects Function Keys and KeyPad settings for Putty, which is a terminal emulator designed for the Windows OS. The options are **VT100**, LINUX, XTERMR6, SCO, ESCN, and VT400.

► Legacy Console Redirection Settings

Legacy Console Redirection Port

Use this feature to select the COM port to display redirection of Legacy OS and Legacy OPRM messages. The options are **COM2/SOL** and COM1.

Legacy OS Redirection Resolution

Use this feature to select the number of rows and columns used in Console Redirection for Legacy OS support. The options are **80x24** and 80x25.

Redirection After BIOS Post

Use this feature to enable or disable Legacy Console Redirection after BIOS POST. When the option - Bootloader is selected, Legacy Console Redirection is disabled before booting the OS. When the option - Always Enable is selected, Legacy Console Redirection remains enabled upon OS bootup. The options are **Always Enable** and Bootloader.

Serial Port for Out-of-Band Management/Windows Emergency Management Services (EMS)

The feature allows the user to configure Console Redirection settings to support Out-of-Band Serial Port management.

Console Redirection (for EMS)

Select Enabled to use a COM port specified by the user for EMS Console Redirection. The options are Enabled and **Disabled**.

If the feature above is set to Enabled, the following items will become available for user's configuration:

► Console Redirection Settings (for EMS)

Out-of-Band Management Port

This feature selects a serial port in a client server to be used by the Windows Emergency Management Services (EMS) to communicate with a remote host server. The options are **COM1** and COM2/SOL (Console Redirection).

Terminal Type

Use this feature to select the target terminal emulation type for Console Redirection. Select VT100 to use the ASCII character set. Select VT100+ to add color and function key support. Select ANSI to use the extended ASCII character set. Select VT-UTF8 to use UTF8 encoding to map Unicode characters into one or more bytes. The options are ANSI, VT100, VT100+, and **VT-UTF8**.

Bits Per Second

This feature sets the transmission speed for a serial port used in Console Redirection. Make sure that the same speed is used in both host computer and the client computer. A lower transmission speed may be required for long and busy lines. The options are 9600, 19200, 57600, and **115200** (bits per second).

Flow Control

Use this feature to set the flow control for Console Redirection to prevent data loss caused by buffer overflow. Send a "Stop" signal to stop data-sending when the receiving buffer is full. Send a "Start" signal to start data-sending when the receiving buffer is empty. The options are **None**, Hardware RTS/CTS, and Software Xon/Xoff.

The setting for each of these features is displayed below:

- Data Bits
- Parity
- Stop Bits

►ACPI Settings

Use this feature to configure Advanced Configuration and Power Interface (ACPI) power management settings for your system.

NUMA

Select Enabled to enable Non-Uniform Memory Access support to enhance system performance. The options are **Enabled** and Disabled.

WHEA Support

Select Enabled to support the Windows Hardware Error Architecture (WHEA) platform and provide a common infrastructure for the system to handle hardware errors within the Windows OS environment to reduce system crashes and to enhance system recovery and health monitoring. The options are **Enabled** and Disabled.

► Trusted Computing (Available when a TPM device is installed and detected by the BIOS)

When a TPM (Trusted-Platform Module) device is detected in your machine, the following information will display:

- TPM 2.0 Device Found:
- Firmware Version:
- Vendor:

Security Device Support

Select Enable for the BIOS to support the security device installed on the motherboard. If there is a TPM jumper installed on the motherboard, please also enable the jumper for this feature to work properly. Please note that the OS will not show the security device when this feature is set to Enabled. Neither TCG EFI protocol nor INT1A interaction will be available for use. If you have made changes on the setting of this feature, be sure to reboot the system for the change to take effect. The options are Disable and **Enable**.

*If this option is set to Enable, the following screen and items will display:

- Active PCR Banks
- Available PCR Banks

SHA-1 PCR Bank

Select Enabled to enable SHA-1 PCR Bank support to enhance system integrity and data security. The options are **Enabled** and Disabled.

SHA256 PCR Bank

Select Enabled to enable SHA256 PCR Bank support to enhance system integrity and data security. The options are **Enabled** and Disabled.

Pending Operation

Use this feature to schedule a TPM-related operation to be performed by a security (TPM) device at the next system boot to enhance system data integrity. Your system will reboot to carry out a pending TPM operation. The options are **None** and TPM Clear.

Note: Your system will reboot to carry out a pending TPM operation.

Platform Hierarchy (for TPM Version 2.0 and above)

Select Enabled for TPM Platform Hierarchy support which will allow the manufacturer to utilize the cryptographic algorithm to define a constant key or a fixed set of keys to be used for initial system boot. These early boot codes are shipped with the platform and are included in the list of "public keys". During system boot, the platform firmware uses the trusted public keys to verify a digital signature in an attempt to manage and control the security of the platform firmware used in a host system via a TPM device. The options are **Enabled** and Disabled.

Storage Hierarchy

Select Enabled for TPM Storage Hierarchy support that is intended to be used for non-privacy-sensitive operations by a platform owner such as an IT professional or the end user. Storage Hierarchy has an owner policy and an authorization value, both of which can be set and are held constant (-rarely changed) through reboots. This hierarchy can be cleared or changed independently of the other hierarchies. The options are **Enabled** and Disabled.

Endorsement Hierarchy

Select Enabled for Endorsement Hierarchy support, which contains separate controls to address the user's privacy concerns because the primary keys in the hierarchy are certified by the TPM key or by a manufacturer with restrictions on how an authentic TPM device that is attached to an authentic platform can be accessed and used. A primary key can be encrypted and certified with a certificate created by using TPM2_ActivateCredential, which allows the user to independently enable "flag, policy, and authorization values" without involving other hierarchies. A user with privacy concerns can disable the endorsement hierarchy while still using the storage hierarchy for TPM applications, permitting the platform software to use the TPM. The options are **Enabled** and Disabled.

PH (Platform Hierarchy) Randomization (for TPM Version 2.0 and above)

Select Enabled for Platform Hierarchy Randomization support, which is used only during the platform developmental stage. This feature cannot be enabled in the production platforms. The options are **Disabled** and Enabled.

TXT Support

Select Enabled to enable Intel Trusted Execution Technology (TXT) support to enhance system integrity and data security. The options are **Disabled** and Enabled.

Note 1: If the option for this feature (TXT Support) is set to Enabled, be sure to disable EV DFX (Device Function On-Hide support when it is present in the BIOS for the system to work properly

Note 2: For more information on TPM, please refer to the TPM manual at <http://www.supermicro.com/manuals/other>.

► SIO Common Setting

When this submenu is selected, the following screen will display:

Lock Legacy Resources

Select Enabled to lock legacy resources to enhance system performance. The options are **Disabled** and Enabled.

► TLS Authenticate Configuration

When this submenu is selected, the following screen will display:

► Server CA Configuration

This feature allows the user to configure the client certificate that is to be used by the server.

► Enroll Certification

This feature allows the user to enroll the certificate in the system.

► Enroll Cert (Certification) Using File

This feature allows the user to enroll the security certificate in the system by using a file.

Cert (Certification) GUID (Global Unique Identifier)

This feature displays the GUID for this system.

► Commit Changes and Exit

Select this feature to save the changes you have made and exit from the system.

► Discard Changes and Exit

Select this feature to discard the changes you have made and exit from the system.

►Delete Certification

If this feature is set to Enable, the certificate enrolled in the system will be deleted. The options are Enable and **Disable**.

►Client Certification Configuration

This feature allows the user to configure the client certificate to be used by the server.

►Enroll Certification

This feature allows the user to enroll the certificate in the system.

►Enroll Cert (Certification) Using File

This feature allows the user to enroll the security certificate in the system by using a file.

Cert (Certification) GUID (Global Unique Identifier)

This feature displays the GUID for this system.

►Commit Changes and Exit

Select this feature to save the changes you have made and exit from the system.

►Discard Changes and Exit

Select this feature to discard the changes you have made and exit from the system.

►Delete Certification

If this feature is set to Enable, the certificate enrolled in the system will be deleted. The options are Enable and **Disable**. supermicro.com/manuals/other.

► All CPU Information

This submenu displays the detailed information of each CPU as detected by the BIOS as shown below.

► RAM Disk Configuration

This feature allows the user to configure the settings for the RAM disks installed in the system. When you select this submenu and press <Enter>, the following items will display:

Disk Memory Type

This feature specifies the type of memory that is available for you to create a RAM disk. The options are **Boot Service Data** and **Reserved**.

► Create Raw

This feature allows the user to create a raw RAM disk from all available memory modules in the system. When you select this submenu and press <Enter>, the following items will display:

- **Size (Hex):** Use this feature to set the size of the raw RAM disk. The default setting is 1.
- **Create & Exit:** Select this feature when you want to exit from this submenu after you've created a raw RAM disk.
- **Discard & Exit:** Select this feature when you want to abandon the changes you've made and to exit from the submenu.

► Create from File

This feature allows the user to create a RAM disk from a file specified by the user. Select this submenu and press <Enter>, the following items will display:

- **Create RAM Disk List:** Use this feature to create a RAM disk list.
- **Remove Selected RAM Disk(s):** Use this feature to delete the RAM disk(s) specified by the user.

Attempt Priority

Use this feature to change the priority of iSCSI attempt using the + or - keys. The options are **Host Attempt**, Redfish Attempt, and Rst Attempt.

Commit Changes and Exit

Select this feature to save the changes you've made and exit from the program.

► iSCSI Configuration

When iSCSI Configuration submenu is selected, the following information will display:

► Attempt Priority

Attempt Priority

Use this feature to change the priority of iSCSI attempts using the + or - keys. The options are **Host Attempt**, Redfish Attempt, and Rsd Attempt.

Commit Changes and Exit

Select this feature to save the changes you've made and exit from the program.

► Host iSCSI Configuration

iSCSI Initiator Name

► Add an Attempt

► Delete Attempts

► Change Attempt Order

 **Note:** For detailed instructions on how to configure iSCSI settings, please refer to the iSCSI Configuration User's Guide posted on the web page under the link: <http://www.supermicro.com/support/manuals/>.

►MAC: B03AF2B6059F - IPv4 Network Configuration

Configured

Select Enabled to show whether the network address has been successfully configured or not. The options are Enabled and **Disabled**.

If this feature is set to Enabled, the following items will display.

Enable DHCP

Select Enabled to support Dynamic Host Configuration Protocol (DHCP) which will allow the AMI BIOS to search for a DHCP server attached to the network and request the next available IP address for this computer. The options are **Disabled** and Enabled.

Local IP Address: Use this feature to enter an IP address for the local machine.

Local Netmask: Use this feature to set the netmask for the local machine.

Local Gateway: Use this feature to set the gateway for the local machine.

Local DNS (Domain Name System) Servers Use this feature to set the DNS server for the local machine.

Save Changes and Exit.

Select Yes to save the changes that you've made and exit from this submenu.

►VLAN Configuration (MAC: 3CECEF3DD9DE)

►Enter Configuration Menu

Create New VLAN

This feature allows the user to create a new VLAN. The default setting is **0**.

VLAN ID

Use this feature to create a new LAN ID by using an existing VLAN or creating a new VLAN ID. Enter a valid value between 0 ~ 4094. The default setting is **0**.

Priority

Use this feature to enter the 802.1Q Priority. Enter a valid value between 0 ~ 7.

Add VLAN

This feature allows the user to add a new VLAN.

Configured VLAN List

This feature displays the following VLAN information

VLAN ID: 0, Priority:0

Select Enabled to use the VLAN ID: 0, Priority: 0 setting. The options are **Disabled** and Enabled.

Remove VLAN

Use this feature to remove the VLAN that has been configured.

►MAC: 3CECEF4F2F50 - IPv4 Network Configuration

Configured

Select Enabled to show whether the network address has been successfully configured or not. The options are **Enabled** and Disabled.

Enable DHCP

Select Enabled to support Dynamic Host Configuration Protocol (DHCP) which will allow the BIOS to search for a DHCP server attached to the network and request the next available IP address for this computer. The options are **Disabled** and Enabled.

Local Address: Use this feature to enter an IP address for the local machine.

Local Netmask: Use this feature to set the netmask for the local machine.

Local Gateway: Use this feature to set the gateway for the local machine.

Local DNS (Domain Name System) Servers Use this feature to set the DNS server for the local machine.

Save Changes and Exit.

Select Yes to save the changes that you've made and exit from this submenu.

►MAC: 3CECEF4F2F50 - IPv6 Network Configuration

►Enter Configuration Menu

The following features will display:

- Interface Name
- Interface Type
- MAC Address
- Host Addresses
- Route Table
- Gateway Addresses
- DNS Addresses

Interface ID

This feature displays the Interface ID used in the network.

DAD (Duplicate Address Detection) Transmit Count

This feature displays the DAD Transmit Count. The default setting is 1.

Policy

Use this feature to select how the policy is to be configured. The options are **Automatic** and **Manual**.

Save Changes and Exit.

Select Yes to save the changes that you've made and exit from this submenu.

4.4 Event Logs

Use this feature to configure Event Log settings.

 **Note:** After making a change on an item below, please reboot the system for the change you've made to take effect.

► Change SMBIOS Event Log Settings

Enabling/Disabling Options

SMBIOS Event Log

Select Enabled to enable SMBIOS (System Management BIOS) Event Logging during system boot. The options are **Enabled** and Disabled.

Erasing Settings

Erase Event Log

Select "No" to keep the event log without erasing it upon next system bootup. Select "Yes, Next Reset" to erase the event log upon next system reboot. The options are **"No"**, "Yes, Next Reset", and "Yes, Every Reset".

When Log is Full

Select Erase Immediately to immediately erase all errors in the SMBIOS event log when the event log is full. Select Do Nothing for the system to do nothing when the SMBIOS event log is full. The options are **Do Nothing** and Erase Immediately.

SMBIOS Event Log Standard Settings

Log System Boot Event

Select Enabled to log system boot events. The options are Enabled and **Disabled**.

MECI (Multiple Event Count Increment)

Enter the increment value for the multiple event counter. Enter a number between 1 to 255. The default setting is 1.

METW (Multiple Event Count Time Window)

This feature is used to determine how long (in minutes) should the multiple event counter wait before generating a new event log. Enter a number between 0 to 99. The default setting is **60**.

►View System Event Log

This feature allows the user to view the event in the system event log. Select this feature and press <Enter> to view the status of an event in the log. The following categories will be displayed:

Date/Time/Error Code/Severity

4.5 Server Mgmt (Management)

Use this menu to configure Server Management settings.

When you select this submenu and press <Enter>, the following information will display:

- **BMC Firmware Revision:** This feature indicates the BMC firmware used in your system.
- **Status of BMC:** This feature indicates the status of BMC (Baseboard Management Controller) used in your system.

Serial MUX (Multiplexer)

Select Enabled to support Serial MUX mode to connect one or more master serial ports to a slave port to increase the number of MUX channels available to the user by using only one serial port. It also allows multiple applications to simultaneously communicate with the SmartMesh IP manager to enhance serial networking performance and management. The options are Enabled and **Disabled**.

► System Event Log

Enabling/Disabling Options

SEL Components

Select Enabled to enable all system event logging upon system boot. The options are **Enabled** and Disabled.

Erasing Settings

Erase SEL

Select "Yes, On next reset" to erase all system event logs upon next system boot. Select "Yes, On every reset" to erase all system event logs upon each system reboot. Select "No"

to keep all system event logs after each system reboot. The options are "**No**", "Yes, On next reset", and "Yes, On every reset".

When SEL is Full

This feature allows the user to determine what the BIOS should do when the system event log is full. Select Erase Immediately to erase all events in the log when the system event log is full. The options are **Do Nothing** and Erase Immediately.

Custom EFI Logging Options

Log EFI Status Codes

This feature specifies the type of codes to be displayed when showing Log EFI Status Codes. The options are Disabled, Both, **Error Codes**, and Progress Codes. (**Note:** for the changes you've made to take effect, please reboot your system.)

►Bmc self test log (BMC Self-Test Log)

Erase Log

Select "Yes, On next reset" to erase all BMC self-test events in the event log upon each system reboot. Select "No" to keep all BMC self-test events in the event log after each system reboot. The options are "**No**" and "Yes, On every reset".

When Log is Full

This feature allows the user to determine what the BIOS should do when the BMC self-test event log is full. Select Clear Log to erase the BMC self-test events log when the event log is full. Select "Do not log any more" to discontinue BMC self-test event logging when the event log is full. The options are **Clear Log** and Do not log any more.

Log Empty: The status of the BMC self-test event log will be displayed.

►BMC Network Configuration

When you select this submenu, the following information will be displayed:

- BMC LAN Selection: This feature allows the user to select the type of the BMC LAN. The manufacturer default setting is **Dedicated**.
- BMC Network Link Status: This feature displays the status of the BMC network link for this system. The manufacturer default setting is **Dedicated LAN**.
- Station MAC Address: This feature displays the Station MAC address for this computer.
- VLAN: This feature displays the status of VLAN support. The manufacturer default setting is **Disabled**.
- IPv4 Address Source: Use this feature to enter the IPv4 address source. The manufacturer default setting is **DHCP**.

- Station IP Address: This feature displays the Station IP address in decimal and in dotted quad form (i.e., 172.31.48.244).
- Subnet Mask: This feature displays the sub-network that this computer belongs to. The value of each three-digit number separated by dots should not exceed 255.
- Gateway IP Address: This feature displays the Gateway IP address for this computer. This should be in decimal and in dotted quad form (i.e., 172.29.0.1).
- IPv6 Address Status: This feature displays the status of IPv6 addresses.
- Station IPv6 Address: This feature displays the station IPv6 address.
- Prefix Length: This feature displays the prefix length.
- IPv6 Router IP Address: This feature displays the IP address of the IPv6 router.

Update BMC LAN Configuration

Select Yes for the BIOS to implement all IP/MAC address changes upon next system boot. The options are **No** and Yes.

4.6 Security

This menu allows the user to configure the following security settings for the system.

Administrator Password

This feature indicates if an administrator password has been installed. It also allows the user to set the administrator password which is required to enter the BIOS setup utility. The length of the password should be from 3 characters to 20 characters long.

User Password (Available when an Administrator Password is entered)

This feature indicates if a user's password has been installed. It also allows the user to set the user's password which is required to enter the BIOS setup utility. This feature provides the description of the user's password. The length of the password should be from 3 characters to 20 characters long.

Password Check

Select Setup for the system to check for a password at Setup. Select Always for the system to check for a password bootup and upon entering the BIOS Setup utility. The options are **Setup** and Always.

Hard Drive Security Frozen

Select Enabled to freeze the Lock Security feature to protect the key data stored in a hard drive disk from being altered. The options are **Enabled** and Disabled.

 **Note:** For detailed instructions on how to configure Security Boot settings, please refer to the Security Boot Configuration User's Guide posted on the web page under the link: <http://www.supermicro.com/support/manuals/>.

►SMCI Security Erase Configuration

This section allows the user to configure the SMCI-proprietary Security Erase settings. When this section is selected, the following features will display:

- HDD Name: This feature displays the name of the HDD/SATA drive that is connected to the SMCI Security Erase Configuration submenu.
- HDD Serial Number: This feature displays the serial number of the HDD/SATA device that is connected to the SMCI Security Erase Configuration submenu.
- Estimated Time: This feature displays the estimate time needed to perform the selected Security Erase features.
- HDD User Pwd (Password) Status: This feature indicates if a password has been set as a SATA user password which will allow the user to configure SMCI Security Erase settings on the HDD (SATA) device by using this SATA user password.

Security Function

Select Password to set an HDD/SATA password which will allow the user to configure the security settings of the HDD/SATA device. Select Security Erase - Password to enter a SATA user password to allow the user to erase the password and the contents previously stored in the HDD/SATA device. Select Security Erase - Without Password to use the manufacturer default password "111111111" as the SATA user password and allow the user to erase the contents of the HDD/SATA device by using this default password. The options are **Disabled**, Set Password, Security Erase-Password, and Security Erase-Without Password.

Password

Use this feature to set the SATA user password which will allow the user to configure the SMCI Security Erase settings by using the SATA user password.

Lockdown Mode

Select Enabled to support Lockdown Mode which will prevent existing data or keys stored in the system from being altered or changed in an effort to preserve system integrity and security. The options are Enabled and **Disabled**.

►Secure Boot

Note: For detailed instructions on how to configure Security Boot settings, please refer to the Security Boot Configuration User's Guide posted on the web page under the link: <http://www.supernmicro.com/support/manuals/>.

When you select this submenu and press the <Enter> key, the following items will display:

- Secure Mode

Secure Boot

Select Enabled to use Secure Boot settings. The options are **Enabled** and Disabled.

Secure Boot Mode

Use this feature to select the desired secure boot mode for the system. The options are **Standard** and Custom.

CMS Support

If this feature is set to Enabled, legacy devices will be supported by the system. The options are **Enabled** and Disabled.

Vendor Keys

Provision Factory Defaults

Select Yes to install manufacturer default keys for system security use. The options are Enabled and **Disabled**.

►Restore Factory Keys

Select Yes to restore manufacturer default keys used to ensure system security. The options are **Yes** and No.

►Reset to Setup Mode

This feature resets the system to Setup Mode. The options are **Yes** and No.

►Key Management (Available when "Secure Boot Mode" is set to Custom)

Vendor Keys

►Factory Key Provision

Select Enabled to install factory default Secure Boot keys after the platform reset while the system is in the Setup mode. The options are **Disabled** and Enabled.

►Restore Factory Keys

Select Yes to restore manufacturer default keys used to ensure system security. The options are **Yes** and No.

►Reset to Setup Mode

This feature resets the system to Setup Mode.

►Export Secure Boot Variables

This feature exports the NVRAM contents of Secure Boot variables to a storage device.

►Enroll EFI Image

This feature specifies which EFI (Extensible Firmware Interface) image should be used in the system when it operates in the Secure Boot mode.

Device Guard Ready

►Remove 'UEFI CA' from DB

Select Yes to remove UEFI CA from the database. The options are **Yes** and No.

►Restore DB defaults

Select Yes to restore database variables to the manufacturer default settings. The options are **Yes** and No.

Secure Boot Variable/Size/Keys/Key Source

►Platform Key (PK)

Use this feature to enter and configure a set of values to be used as the platform firmware keys for the system. These values also indicate the sizes, keys numbers, and the sources of the authorized signatures. Select Update to update the platform keys. The options are **Details**, Export, Update, and Delete.

►Key Exchange Keys

Use this feature to enter and configure a set of values to be used as Key-Exchange-Keys for the system. These values also indicate the sizes, keys numbers, and the sources of the authorized signatures. Select Update to update your "Key Exchange Keys". Select Append to append your "Key Exchange Keys". The options are **Details**, Export, Update, Append, and Delete.

►Authorized Signatures

Use this feature to enter and configure a set of values to be used as Authorized Signatures for the system. These values also indicate the sizes, keys numbers, and the sources of the authorized signatures. Select Update to update your "Authorized Signatures". Select Append to append your "Authorized Signatures". The options are **Details**, Export, Update, Append, and Delete.

►Forbidden Signatures

Use this feature to enter and configure a set of values to be used as Forbidden Signatures for the system. These values also indicate sizes, keys numbers, and key sources of the forbidden signatures. Select Update to update your "Forbidden Signatures". Select Append to append your "Forbidden Signatures". The options are **Details**, Export, Update, Append, and Delete.

►Authorized TimeStamps

This feature allows the user to set and save the timestamps for the authorized signatures which will indicate the time when these signatures are entered into the system. Select Update to update your "Authorized TimeStamps". Select Append to append your "Authorized TimeStamps". The settings are **Update** and Append.

►OsRecovery (OS Recovery) Signatures

This feature allows the user to set and save the authorized signatures used for OS recovery. Select Update to update your "OS Recovery Signatures". Select Append to append your "OS Recovery Signatures". The settings are **Update** and Append.

4.7 Boot

Use this feature to configure Boot Settings:

Boot Mode Select

Use this feature to select the type of devices from which the system will boot. The options are LEGACY, **UEFI (Unified Extensible Firmware Interface)**, and DUAL.

Fixed Boot Order Priorities

This feature prioritizes the order of a bootable device from which the system will boot. Press <Enter> on each item sequentially to select devices.

When the feature "Boot Mode Select" is set to **Dual** (default), the following items will be displayed for the user to configure the boot settings:

- Boot Option #1 ~ Boot Option #17

When the feature "Boot Mode Select" is set to Legacy, the following items will be displayed for configuration:

- Boot Option #1 ~ Boot Option #8

When the feature "Boot Mode Select" is set to UEFI, the following items will be displayed for configuration:

- Boot Option #1 ~ Boot Option #9

Add New Boot Option

This feature allows the user to add a new boot option to the boot priority features for system boot.

Add Boot Option

This feature allows the user to specify the name for the new boot option.

Path for Boot Option

Use this feature to enter the path for the new boot option in the format fsx:\path\filename.efi.

Boot Option File Path

This feature allows the user to specify the file path for the new boot option.

Create

After the name and the file path for the boot option are set, press <Enter> to create the new boot option in the boot priority list.

Save

After you've created a new boot option, press <Enter> to save the changes.

►Delete Boot Option

This feature allows the user to select a boot device to delete from the boot priority list.

Delete Boot Option

This feature allows the user to remove an EFI boot option from the boot priority list.

►Add New Driver Option

This feature allows the user to select a new driver to add to the boot priority list.

Add Driver Option

This feature allows the user to specify the name of the driver to be added to the boot priority list.

Path for Driver Option

This feature allows the user to specify the path to the driver that will be added to the boot priority list.

Driver Option File Path

This feature allows the user to specify the file path of the driver that will be added to the boot priority list.

Create

After the driver option name and the file path are set, press <Enter> to enter to submenu and click OK to create the new boot option drive.

Save

After you've created a new boot option, press <Enter> to save the changes.

▶Delete Driver Option

This feature allows the user to select a boot driver to delete from the boot priority list.

Delete Drive Option

Select the target boot driver to delete from the boot priority list.

▶Hard Disk Drive BBS Priorities

Boot Option #1

▶USB Key Drive BBS Priorities

Boot Option #1

▶UEFI Application Boot Priorities

Boot Option #1

▶Network Drive BBS Priorities

Boot Option #1

▶USB Key Drive BBS Priorities

Boot Option #1

▶Hard Disk Drive BBS Priorities

Boot Option #1

▶Network Drive BBS Priorities

Boot Option #1 ~ Boot Option #3

4.8 Save & Exit

Select the Save & Exit menu from the BIOS setup screen to configure the settings below.

Save Options

Discard Changes and Exit

Select this option to exit from the BIOS setup utility without making any permanent changes to the system configuration and reboot the computer.

Save Changes and Reset

When you have completed the system configuration changes, select this option to leave the BIOS setup utility and reboot the computer for the new system configuration parameters to become effective.

Save Changes

When you have completed the system configuration changes, select this option to save all changes made. This will not reset (reboot) the system.

Discard Changes

Select this option and press <Enter> to discard all the changes you've made and return to the AMI BIOS setup utility.

Default Options

Restore Default Values

To set this feature, select Restore Default Values from the Exit menu and press <Enter> to load manufacturer default settings which are intended for maximum system performance but not for maximum stability.

Save the User Default Values

To set this feature, select Save the User Default Values from the Exit menu and press <Enter>. This enables the user to save all changes on the user's default values to the BIOS setup utility for future use.

Restore the User Default Values

To set this feature, select Restore the User Default Values from the Exit menu and press <Enter>. Use this feature to retrieve user-defined default settings that have been saved previously.

Boot Override

This feature allows the user to override the Boot priorities sequence in the Boot menu, and immediately boot the system with a device specified by the user instead of the one specified in the boot list. This is a one-time override.

Appendix A

BIOS POST Codes

A.1 BIOS POST Codes

The AMI BIOS supplies additional checkpoint codes, which are documented online at <http://www.supermicro.com/support/manuals/> ("AMI BIOS POST Codes User's Guide").

When BIOS performs the Power On Self Test, it writes checkpoint codes to I/O port 0080h. If the computer cannot complete the boot process, a diagnostic card can be attached to the computer to read I/O port 0080h (Supermicro p/n AOC-LPC80-20).

For information on AMI updates, please refer to <http://www.ami.com/products/>.

Appendix B

Software

After the hardware has been installed, you can install the Operating System (OS), configure RAID settings, and install the drivers.

B.1 Microsoft Windows OS Installation

If you will be using RAID, you must configure RAID settings before installing the Windows OS and the RAID driver. Refer to the RAID Configuration User Guides posted on our website at www.supermicro.com/support/manuals.

Installing the OS

1. Create a method to access the MS Windows installation ISO file. That might be a DVD, perhaps using an external USB/SATA DVD drive, or a USB flash drive, or the BMC KVM console.
2. Retrieve the proper RST/RSTe driver. Go to the Supermicro web page for your motherboard and click on "Download the Latest Drivers and Utilities", select the proper driver, and copy it to a USB flash drive.
3. Boot from a bootable device with Windows OS installation. You can see a bootable device list by pressing **F11** during the system startup.

4. During Windows Setup, continue to the dialog where you select the drives on which to install Windows. If the disk you want to use is not listed, click on “Load driver” link at the bottom left corner.

To load the driver, browse the USB flash drive for the proper driver files.

- For RAID, choose the SATA/sSATA RAID driver indicated then choose the storage drive on which you want to install it.
 - For non-RAID, choose the SATA/sSATA AHCI driver indicated then choose the storage drive on which you want to install it.
5. Once all devices are specified, continue with the installation.
 6. After the Windows OS installation has completed, the system will automatically reboot multiple times.

B.2 Driver Installation

The Supermicro website contains drivers and utilities for your system at <https://www.supermicro.com/wftp/driver>. Some of these must be installed, such as the chipset driver.

After accessing the website, go into the CDR_Images (in the parent directory of the above link) and locate the ISO file for your motherboard. Download this file to a USB flash drive or a DVD. (You may also use a utility to extract the ISO file if preferred.)

Another option is to go to the Supermicro website at <http://www.supermicro.com/products/>. Find the product page for your motherboard, and "Download the Latest Drivers and Utilities".

Insert the flash drive or disk and the screenshot shown below should appear.

Note: Click the icons showing a hand writing on paper to view the readme files for each item. Click the computer icons to the right of these items to install each item (from top to the bottom) one at a time. **After installing each item, you must re-boot the system before moving on to the next item on the list.** The bottom icon with a CD on it allows you to view the entire contents.

B.3 SuperDoctor® 5

The Supermicro SuperDoctor 5 is a program that functions in a command-line or web-based interface for Windows and Linux operating systems. The program monitors such system health information as CPU temperature, system voltages, system power consumption, fan speed, and provides alerts via email or Simple Network Management Protocol (SNMP).

SuperDoctor 5 comes in local and remote management versions and can be used with Nagios to maximize your system monitoring needs. With SuperDoctor 5 Management Server (SSM Server), you can remotely control power on/off and reset chassis intrusion for multiple systems with SuperDoctor 5 or BMC. SuperDoctor 5 Management Server monitors HTTP, FTP, and SMTP services to optimize the efficiency of your operation.

 **Note:** The default User Name and Password for SuperDoctor 5 is ADMIN / ADMIN.

B.4 BMC

The B12DPT-6 supports the Baseboard Management Controller (BMC). BMC is used to provide remote access, monitoring and management. There are several BIOS settings that are related to BMC.

For general documentation and information on BMC, please visit our website at: <http://www.supermicro.com/products/nfo/BMC.cfm>.

B.5 Logging into the BMC (Baseboard Management Controller)

Supermicro ships standard products with a unique password for the BMC ADMIN user. This password can be found on a label on the motherboard.

When logging in to the BMC for the first time, please use the unique password provided by Supermicro to log in. You can change the unique password to a user name and password of your choice for subsequent logins.

For more information regarding BMC passwords, please visit our website at <http://www.supermicro.com/bmcpassword>.

Appendix C

Standardized Warning Statements

The following statements are industry standard warnings, provided to warn the user of situations where a potential bodily injury may occur. Should you have questions or experience difficulty, contact Supermicro's Technical Support department for assistance. Only certified technicians should attempt to install or configure components.

Read this section in its entirety before installing or configuring components.

These warnings may also be found on our website at http://www.supermicro.com/about/policies/safety_information.cfm.

Battery Handling

Warning! There is the danger of explosion if the battery is replaced incorrectly. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions

電池の取り扱い

電池交換が正しく行われなかった場合、破裂の危険性があります。交換する電池はメーカーが推奨する型、または同等のものを使用下さい。使用済電池は製造元の指示に従って処分して下さい。

警告

電池更換不當會有爆炸危險。請只使用同類電池或制造商推薦的功能相當的電池更換原有電池。請按製造商的說明處理廢舊電池。

警告

電池更換不當會有爆炸危險。請使用製造商建議之相同或功能相當的電池更換原有電池。請按照製造商的說明指示處理廢棄舊電池。

Warnung

Bei Einsetzen einer falschen Batterie besteht Explosionsgefahr. Ersetzen Sie die Batterie nur durch den gleichen oder vom Hersteller empfohlenen Batterietyp. Entsorgen Sie die benutzten Batterien nach den Anweisungen des Herstellers.

Attention

Danger d'explosion si la pile n'est pas remplacée correctement. Ne la remplacer que par une pile de type semblable ou équivalent, recommandée par le fabricant. Jeter les piles usagées conformément aux instructions du fabricant.

¡Advertencia!

Existe peligro de explosión si la batería se reemplaza de manera incorrecta. Reemplazar la batería exclusivamente con el mismo tipo o el equivalente recomendado por el fabricante. Desechar las baterías gastadas según las instrucciones del fabricante.

אזהרה!

קיימת סכנת פיצוץ של הסוללה במידה והוחלפה בדרך לא תקינה. יש להחליף את הסוללה בסוג התואם מחברת יצרן מומלצת. סילוק הסוללות המושמשות יש לבצע לפי הוראות היצרן.

هناك خطر من انفجار في حالة اسبدال البطارية بطريقة غير صحيحة فعلى اسبدال البطارية

فقط بنفس النوع أو ما يعادلها مما أوصت به الشركة المصنعة
جخلص من البطاريات المسحمة وفقاً لتعليمات الشركة الصانعة

경고!

배터리가 올바르게 교체되지 않으면 폭발의 위험이 있습니다. 기존 배터리와 동일하거나 제조사에서 권장하는 동등한 종류의 배터리로만 교체해야 합니다. 제조사의 안내에 따라 사용된 배터리를 처리하여 주십시오.

Waarschuwing

Er is ontploffingsgevaar indien de batterij verkeerd vervangen wordt. Vervang de batterij slechts met hetzelfde of een equivalent type die door de fabrikant aanbevolen wordt. Gebruikte batterijen dienen overeenkomstig fabrieksvoorschriften afgevoerd te worden.

Product Disposal

Warning! Ultimate disposal of this product should be handled according to all national laws and regulations.

製品の廃棄

この製品を廃棄処分する場合、国の関係する全ての法律・条例に従い処理する必要があります。

警告

本产品的废弃处理应根据所有国家的法律和规章进行。

警告

本產品的廢棄處理應根據所有國家的法律和規章進行。

Warnung

Die Entsorgung dieses Produkts sollte gemäß allen Bestimmungen und Gesetzen des Landes erfolgen.

¡Advertencia!

Al deshacerse por completo de este producto debe seguir todas las leyes y reglamentos nacionales.

Attention

La mise au rebut ou le recyclage de ce produit sont généralement soumis à des lois et/ou directives de respect de l'environnement. Renseignez-vous auprès de l'organisme compétent.

סילוק המוצר

אזהרה!

סילוק סופי של מוצר זה חייב להיות בהתאם להנחיות וחוקי המדינה.

عند التخلص النهائي من هذا المنتج ينبغي التعامل معه وفقا لجميع القوانين واللوائح الوطنية

경고!

이 제품은 해당 국가의 관련 법규 및 규정에 따라 폐기되어야 합니다.

Waarschuwing

De uiteindelijke verwijdering van dit product dient te geschieden in overeenstemming met alle nationale wetten en reglementen.
