Preface

About this User's Guide

This user's guide is written for system integrators, PC technicians, and knowledgeable PC users. It provides information for the installation and use of the AOC-MHIBE-m1CG add-on card.

About this Add-on Card

The AOC-MHIBE-m1CG is one of the most powerful InfiniBand controllers in the market. In the SIOM (Super I/O Module) form factor, it provides 100Gbps InfiniBand EDR or 100Gbps Ethernet for the networking bandwidth with additional Gigabit LAN controller for IPMI remote management. Based on Mellanox® ConnectX-4 VPI and Intel® i210, this add-on card provides excellent performance and the most flexible interconnect solution for servers used in data centers and enterprise environments.

An Important Note to the User

All images and layouts shown in this user's guide are based upon the latest PCB revision available at the time of publishing. The card you have received may or may not look exactly the same as the graphics shown in this user's guide.

Returning Merchandise for Service

A receipt or copy of your invoice marked with the date of purchase is required before any warranty service will be rendered. You can obtain service by calling your vendor for a Returned Merchandise Authorization (RMA) number. When returning the add-on-card to the manufacturer, the RMA number should be prominently displayed on the outside of the shipping carton, and the shipping package is mailed prepaid or hand-carried. Shipping and handling charges will be applied for all orders that must be mailed when service is complete. For faster service, You can also request a RMA authorization online (http://www.supermicro.com).

This warranty only covers normal consumer use and does not cover damages incurred in shipping or from failure due to the alternation, misuse, abuse or improper maintenance of products.

During the warranty period, contact your distributor first for any product problems.
Conventions Used in the User's Guide

Pay special attention to the following symbols for proper system installation and to prevent damage to the system or injury to yourself:

Note: Additional information given to provide information for correct system setup.

Naming Convention

Chapter 1

Overview

1-1  Overview

Congratulations on purchasing your add-on card from an acknowledged leader in the industry. Supermicro products are designed with the utmost attention to detail to provide you with the highest standards in quality and performance. For product support and updates, please refer to our website at http://www.supermicro.com/products/nfo/networking.cfm#adapter.

1-2  Key Features

The key features of this add-on card include the following:

• Super I/O Module (SIOM) form factor

• Mellanox® ConnectX-4 VPI InfiniBand EDR controller, single QSFP28 connector

• Up to 100Gbps InfiniBand or 100Gbps Ethernet

• Virtual Protocol Interconnect (VPI)

• VXLAN and NVGRE

• Intel® i210 GbE controller, single RJ45 connector

• SR-IOV for virtualization

• NC-SI for remote management

• Asset Management with thermal sensor

• RoHS compliant 6/6

1-3  Specifications

General

• Super I/O Module (SIOM) form factor
• Mellanox® ConnectX-4 VPI EDR controller
  • Single QSFP28 port with speeds up to 100Gbps per port

• Intel® i210 GbE controller
  • Single RJ45 port with speeds up to 1Gbps per port

Cables Support
• InfiniBand EDR/100GbE:
  • QSFP28 100Gbps copper cable
  • Fiber optic cable (with required optional QSFP28 optical transceiver)

• GbE: RJ45 category 5/5e up to 100m
  
  Note: Please check Supermicro website for supported cable/transceiver part numbers.

Power Consumption
• Maximum 19W

Operating Condition
• Operating temperature: 0°C to 55°C (32°F to 131°F)
• Storage temperature: -40°C to 70°C (-40°F to 158°F)
• Storage humidity: 90% non-condensing relative humidity at 35°C

Physical Dimensions
• Card PCB dimensions: 92mm (3.62in) x 87.1mm (3.43in) (WxD)

Supported Platforms
• Supermicro® motherboards with Super I/O Module (SIOM) slot
• Supermicro® server systems with Super I/O Module slot (see SIOM Compatibility Matrix online at http://www.supermicro.com/support/resources/AOC/AOC_Compatibility_SIOM.cfm)

1-4 InfiniBand EDR QSFP28 Specifications

Mellanox® ConnectX-4 VPI EDR controller with a single QSFP28 port and speeds up to 100Gbps.

**InfiniBand**

• IBTA specification 1.3 compliant

• Hardware-based congestion control

• 256 to 4Kbyte MTU, 2GB messages

**Enhanced Features**

• Hardware-based reliable transport

• Collective operations offloads

• Mellanox PeerDirectTM RDMA communication acceleration

• Extended reliable connected transport

• Enhanced atomic operations

**Ethernet**

• IEEE 802.3bj, 802.3bm 100 Gigabit Ethernet

• IEEE 802.3az Energy Efficient Ethernet

• IEEE 802.3ad, 802.1AX Link Aggregation

• IEEE 1588v2

• Jumbo frame support (9.6KB)
Overlay Networks

- Hardware offload of encapsulation and decapsulation of NVGRE and VXLAN overlay networks

Hardware-based I/O Virtualization

- Single root IOV
- Multi-function per port
- Address translation and protection
- Multiple queues per virtual machine
- Enhanced QoS for vNICs
- VMware NetQueue support

Virtualization

- SR-IOV: Up to 256 virtual functions
- SR-IOV: Up to 16 physical functions per port

CPU Offloads

- RDMA over Converged Ethernet (RoCE)
- TCP/UDP/IP stateless offload
- LSO, LRO, checksum offload
- Intelligent interrupt coalescence

Remote Boot

- Remote boot over InfiniBand
- Remote boot over Ethernet
• Remote boot over iSCSI

• PXE and UEFI

**Protocol Support**

• OpenMPI, IBM PE, OSU MPI (MVAPICH/2), Intel® MPI

• Platform MPI, UPC, Mellanox SHMEM

• TCP/UDP, EoIB, IPoIB, SDP, RDS, MPLS, VxLAN, NVGRE, GENEVE

• SRP, iSER, NFS RDMA, SMB Direct

• uDAPL

**Operating System Support**

• Linux

• Windows

• FreeBSD

• VMware

**1-5 GbE RJ45 Specifications**

Intel® i210 GbE controller with a single RJ45 port and speeds up to 1Gbps

**Performance and Efficiency Features**

• Energy Efficient Ethernet (EEE)

• Jumbo frame support

• Low latency

• TCP/UDP, IPv4 checksum offloads
• IPv6 support for IP/TCP and IP/UDP receive checksum offload

• Low latency interrupts

Manageability Features

• NC-SI

Operating System Support

• Linux

• Windows

• FreeBSD

• VMware

Note: This product is sold only as part of an integrated solution with Supermicro server systems.

</tr>
</tbody>
</table>

The following major components are installed on the AOC-MHIBE-m1CG:

1. Intel® i210
2. Mellanox® ConnectX-4 VPI
3. Single RJ45 LAN port
4. Single QSFP28 (Small Form Factor Pluggable) port
5. QSFP28 Link/Activity LED
### 2-3 QSFP28 Ethernet Connections

**QSFP28 (QSFP1) Connector**

One small form-factor pluggable (QSFP28) optical transceiver connector (QSFP1) is located on the add-on card. Connect a QSFP28 cable to this port to provide Infiniband (100Gb/s) and Ethernet (100GbE) communication. See the layout below for the location.

---

**QSFP28 (QSFP1) Link/Activity LED Indicators**

One Link/Activity LED indicator is located at LED1 on the add-on card. LED1 is used for the QSFP28 (QSFP1) connector. See the tables below for the LED color and definition.

<table>
<thead>
<tr>

2. QSFP Link/Activity LED Indicator
2-4 RJ45 LAN Port and LAN LED indicator

RJ45 LAN Port (LAN1)
There is one RJ45 LAN port (LAN1) on the AOC-MHIBE-m1CG. The LAN port supports connection speed of 1Gbps. Use a direct-attach RJ45 type LAN cable. See the layout below for the location.

Note: Please refer to page 1-2 for recommended cables.

RJ45 LAN Port LED Indicators
The LAN port has two LEDs to indicate speeds and data activities. Refer to the tables below for LED color and definition.

Chapter 3
Installation

3-1 Static-Sensitive Devices

Electrostatic Discharge (ESD) can damage electronic components. To avoid damaging your add-on card, it is important to handle it very carefully. The following measures are generally sufficient to protect your equipment from ESD.

Precautions

• Use a grounded wrist strap designed to prevent static discharge.

• Touch a grounded metal object before removing the add-on card from the antistatic bag.

• Handle the add-on card by its edges only; do not touch its components.

• Put the add-on card back into the antistatic bags when not in use.

• For grounding purposes, make sure that your system chassis provides excellent conductivity between the power supply, the case, the mounting fasteners and the add-on card.

Unpacking

The add-on card is shipped in antistatic packaging to avoid static damage. When unpacking your component or system, make sure you are static protected.

Note: To avoid damaging your components and to ensure proper installation, always connect the power cord last, and always unplug it before adding, removing, or changing any hardware components.
3-2 Before Installation

Before you install the add-on card, follow the instructions below.

1. Power down the system.

2. Unplug the power cord.

3. Use industry-standard anti-static equipment such as gloves or a wrist strap and follow the precautions on page 3-1 to avoid damage caused by ESD.

4. Familiarize yourself with the server, motherboard, and/or chassis documentation.

5. Confirm that your operating system includes the latest updates and hotfixes.

3-3 Installing the Add-on Card

Follow the steps below to install the add-on card into your system.

1. Remove the server cover and, if any, set aside any screws for later use.

2. Remove the add-on card slot cover. If the slot cover has a screw, place it aside for later use.

3. Position the add-on card in front of the SIOM slot and gently push in both sides of the card until it slides into the slot.

![SIOM card with the bracket installed](image)

Insert the SIOM card into this slot

**Note:** This add-on card does not support hot plug. Please turn off the AC power and remove the power cord from the wall socket before you install or remove the add-on card.
Follow this step to install the add-on card if your system does not support a swappable bracket. Insert the SIOM card in the motherboard and then install the motherboard in the chassis. An internal bracket comes with the SIOM card 1U in the chassis SKU. It needs to be installed onto the chassis.

4. Secure the add-on card to the chassis. If required, use the screws that you previously removed.

5. Attach any necessary external cables to the add-on card.

6. Replace the system cover.

7. Plug in the power cord and power up the system.

Note: Supermicro recommends that this SIOM card be installed by a system integrator or by the manufacturer.
Follow the steps below to install the add-on card into your system that supports a swappable bracket. The add-on card must be installed in the swappable bracket before it can be installed in your system.

1. Install the add-on card into the swappable bracket.

2. Position the add-on card in front of the SIOM slot and gently push in both sides of the card until it slides into the slot.

3. Once the card is in the slot, push both knobs in and turn to the right to lock the card in the system. The left knob has the unlock/lock symbols next to it. To ensure that the add-on is locked, make sure that the knob position indicator is pointing to the lock symbol.
3-5 Installing Drivers on Linux (for Intel® i210)

Follow the steps below to install the drivers for Linux.

Build a Binary RPM Package

1. Run `rpmbuild -tb <filename.tar.gz>`

2. Replace `<filename.tar.gz>` with the specific filename of the driver.

Note: For the build to work properly, the current running kernel MUST match the version and configuration of the installed kernel sources. If you have just recompiled the kernel, reboot the system at this time. Follow the instructions below to build the driver manually.

3-4 Installing Drivers on Windows (for Intel® i210)

Follow the steps below to install the drivers for the Windows operation systems. Download the driver from the Supermicro CDR-NIC LAN driver CD, the Intel® Support website that contains the latest driver, or go to the Supermicro site at https://www.supermicro.com/wftp/Networking_Drivers/.

1. Run CDR-NIC.

2. When the SUPERMICRO window appears, click on the computer icon next to the product model.
Follow the instructions below to build the driver manually.

1. Move the base driver tar file to the directory of your choice. For example:

   /home/username/igb

or

   /usr/local/src/igb

2. Untar/unzip archive, where <x.x.x> is the version number for the driver tar file:

   tar xvzf igb-x.x.x.tar.gz

3. Change to the driver src directory, where <x.x.x> is the version number for the driver tar:

   cd igb-x.x.x/src/

4. Compile the driver module:

   make install

   The binary will be installed as:

   /lib/modules/[KERNEL_VERSION]/kernel/drivers/net/ethernet/intel/ixgbe/ixgbe.ko.xz

   The install locations listed above are the default locations. They may not be correct for certain Linux distributions. For more information, see the ldistrib.txt file included in the driver tar.

   **Note:** IXGBE_NO_LRO is a compile time flag. The user can enable it at the compile time to remove support for LRO from the driver. The flag is used by adding CFLAGS.EXTRA=-"DIXGBE_NO_LRO" to the make file when it's being compiled.

   make CFLAGS.EXTRA="-DIXGBE_NO_LRO" install

5. Load the module:

   For kernel 2.6.x, use the modprobe command:

   modprobe ixgbe <parameter>=<value>
For 2.6 kernels, the `insmod` command can be used if the full path to the driver module is specified. For example:

```
insmod /lib/modules/[KERNEL_VERSION]/kernel/drivers/net/ethernet/intel/ixgbe/ixgbe.ko.xz
```

For more driver installation information, please refer to the Intel® Support website.

### 3-6 Installing Drivers on FreeBSD (for Intel® i210)

Follow the instructions below to install the drivers for FreeBSD kernel 4.8 or later. In the instructions below, x.x.x is the driver version as indicated in the name of the drive tar file.

izationalNote: You must have kernel sources installed in order to compile the driver module.

1. Move the base driver tar file to the directory of your choice. For example, use `/home/username/ixgb` or `/usr/local/src/ixgb`.

2. Untar/unzip the archive:

```
tar xzf ixgb-x.x.x directory
```

3. To install main page:

```
  cd ixgb-x.x.x
  gzip -c ixgb.4 > /usr/share/man/man4/ixgb.4.gz
```

4. To load the driver onto a running system, perform the following steps:

```
  cd ixgb-x.x.x
  make
  or
  cd ixgb-x.x.x/src
  make load
```

5. To assign an IP address to the interface, enter the following:

```
  ifconfig ixgb<interface_num> <IP_address>
```

6. Verify that the interface works. Enter the following, where `<IP_address>` is the IP address for another machine on the same subnet as the interface that is being tested:

```
ping <IP_address>
```
7. If you want the driver to load automatically when the system is booted:

```
cd ixgb-x.x.x/src
make load
cp if_ixgb.ko /modules
```

Edit `/boot/loader.conf`, and add the following line:
```
if_ixgb_load="YES"
```
or

compile the driver into the kernel (see item 8 below). Edit `/etc/rc.conf`, and create
the appropriate `ifconfig_ixgb<interface_num>` entry:
```
ifconfig_ixgb<interface_num>="<ifconfig_settings>"
```

Example of usage:
```
ifconfig_ixgb0="inet 192.168.10.1 netmask 255.255.255.0"
```

8. If you want to compile the driver into the kernel, enter:

```
cd ixgb-x.x.x/src
mkdir /usr/src/sys/dev/ixgb
cp if_ixgb* /usr/src/sys/dev/ixgb
cp ixgb* /usr/src/sys/dev/ixgb
cp Makefile.kernel /usr/src/sys/modules/ixgb/Makefile
```

Edit the `/usr/src/sys/conf/files.i386` file, and add the following lines:
```
dev/ixgb/ixgb_hw.c optional ixgb
dev/ixgb/ixgb_ee.c optional ixgb
dev/ixgb/if_ixgb.c optional ixgb
```

Remove the following lines from the `/usr/src/sys/conf/files.i386` file, if they exist:
```
/dev/ixgb/if_ixgb_fx_hw.c optional ixgb
/dev/ixgb/if_ixgb_phy.c optional ixgb
```

Edit the kernel configuration file (i.e., GENERIC or MYKERNEL) in `/usr/src/sys/i386/conf`, and ensure the following line is present:
```
device ixgb
```

Compile and install the kernel. Reboot the system for the kernel updates to take affect.
Chapter 3: Installation

3-7 Installing Drivers (for Mellanox® ConnectX®-4 VPI)

Use the procedures below to install drivers for Linux.

**Linux Drivers**

Use the following procedures to install drivers on the Linux operating system.

**Installing InfiniBand Drivers for the Linux Operating System**

1. Download the driver from the Supermicro CDR-NIC LAN driver CD, the Mellanox® Support website that contains the latest driver, or go to the Supermicro site at [https://www.supermicro.com/wftp/Networking_Drivers/Mellanox/](https://www.supermicro.com/wftp/Networking_Drivers/Mellanox/). Go to the following directory: Mellanox > Linux.

2. Choose the desired InfiniBand Linux driver package file.

3. Install the driver by entering the following commands:

```
tar xzvf MLNX_OFED_LINUX-<ver>.tgz
cd MLNX_OFED_LINUX–<ver>
./mlnxofedinstall --without-fw-update
```

This installs the Linux driver to your system. For more driver installation information, please refer to the Mellanox® Support website.

**Windows Drivers**

Use the following procedures to install drivers on the Windows operating system.

**Installing InfiniBand Drivers for the Windows Operating System**

1. Download the driver from the Supermicro CDR-NIC LAN driver CD, the Mellanox® Support website that contains the latest driver, or go to the Supermicro site at [https://www.supermicro.com/wftp/Networking_Drivers/Mellanox/](https://www.supermicro.com/wftp/Networking_Drivers/Mellanox/). Go to the following directory: Mellanox > Windows.

2. Choose the desired InfiniBand Windows driver package file.

3. Double-click to run and install the driver package file.
3-8  Changing from InfiniBand to Ethernet mode

AOC-MHIBE-m1CG is by default set to InfiniBand mode. To change the setting to Ethernet mode, please follow the instructions below.

1. Double-check and make sure that the add-on card is detected. Run the `lspci` command:

   [root@localhost ~]# lspci | grep Mellanox
   17:00.0 Ethernet controller: Mellanox Technologies
   MT27700 Family [ConnectX-4]

2. If the setting remains unchanged, start MST:

   [root@localhost ~]# mst start
   Starting MST (Mellanox Software Tools) driver set
   Loading MST PCI module - Success
   [warn] mst_pciconf is already loaded, skipping
   Create devices
   Unloading MST PCI module (unused) - Success
3. To check whether the add-on card is set to Ethernet or InfiniBand mode and to verify if the LAN port is active or not, run the following command:

```
ibv_devinfo
```

```
[root@localhost ~]# ibv_devinfo
hca_id: mlx5_0

  transport: InfiniBand (0)
  fw_ver: 12.21.1000
  node_guid: aclf:6bff:ff0d:a004
  sys_image_guid: aclf:6bff:ff0d:a004
  vendor_id: 0x02c9
  vendor_part_id: 4115
  hw_ver: 0x0
  board_id: SM_1221000001000
  phys_port_cnt: 1

Device ports:
  port: 1
    state: PORT_DOWN (1)
    max_mtu: 4096 (5)
    active_mtu: 4096 (5)
    sm_lid: 0
    port_lid: 65535
    port_lmc: 0x00
    link_layer: InfiniBand
```

4. Use the command, `#mlxfwmanager`, to extract the "vendor_part id" parameter.

```
[root@localhost ~]# mlxfwmanager
Querying Mellanox devices firmware...
Device#1:
- - - - - - - -
  Device Type: ConnectX4
  Part Number: Super_Micro_AOC-MHIBE-M1CG_R100
  Description: Super Micro ConnectX-4 Single Port VPI EDR/100GbE SIOM
  PSID: SM_1221000001000
  PCI Device Name: /dev/mst/mt4115_pciconf0
  Base MAC: aclf6b0da004
  Versions: Current Available
    FW 12.21.1000 N/A
    PXE 3.5.0305 N/A
    UEFI 14.14.0022 N/A
  Status: No matching image found
5. To change the add-on card to Ethernet mode (LINK_TYPE=2), please enter command `#mlxconfig -d<vendor_part id>` and then key in "y" to apply the new configuration. (The command below is using the device ID in step 4 on page 3-11). Please note that in changing the setting from Ethernet to InfiniBand mode, the command must specify "LINK_TYPE_P1=1" at the end of the command line.

```
[root@localhost ~]# mlxconfig -d /dev/mst/mt4115_pciconf0
set LINK_TYPE_P1=2
Device #1:
- - - - - - -
Device type: ConnectX4
Name: N/A
Description: N/A
Device: /dev/mst/mt4115_pciconf0
Configurations:   Next Boot New
LINK_TYPE_P1  IB(1)  ETH(2)
Apply new Configuration? (y/n) [n]:_
```

6. Reboot your computer and then the changes made will take effect.

7. Once the system is rebooted, you can use the following command to verify whether the LAN port is changed to Ethernet mode or not:

```
[root@localhost ~]# ibv_devinfo
hca_id: mlx5_0
transport: InfiniBand (0)
fw_ver: 12.21.1000
node_guid: aclf:6bff:ff0d:a004
sys_image_guid: aclf:6bff:ff0d:a004
vendor_id: 0x02c9
vendor_part_id: 4115
hw_ver: 0x0
board_id: SM_1221000001000
phys_port_cnt: 1
Device ports:
  port: 1
    state: PORT_DOWN (1)
    max_mtu: 4096 (5)
    active_mtu: 1024 (3)
    sm_lid: 0
    port_lid: 0
    port_lmc: 0x0
    link_layer: Ethernet
```
3-9 Using the Mellanox Controller for PXE Boot

To use PXE boot, the Mellanox (QSFP) port needs to be configured as either Ethernet or InfiniBand mode depending on the previous setup. Please follow the instructions below to use PXE boot.

1. After a QSFP cable is connected, boot up the system and keep pressing <CTRL+B> to boot into FlexBoot Menu:

   ![FlexBoot Menu Screenshot]

2. When the System setup page appears, select "net0: Port1".

   ![System Setup Screenshot]

3. And then click on "NIC Configuration". Select "PXE" under "Legacy boot protocol" and select "Ethernet" under "VPI link type". (To use PXE in InfiniBand mode, InfiniBand needs to be selected under "VPI link type".)

   ![NIC Configuration Screenshot]
4. Go to BIOS. From the top of the tool bar, select "Boot" to enter the submenu. Select "Network Drive BBS Priorities" and then select "FlexBoot v#.#.###..." under Boot Option #1.

5. To boot from PXE automatically, make sure Boot Option #1 is "Network: Flex boot" as the image shown below.
