Preface

About this User's Guide

This user's guide is written for system integrators, IT technicians and knowledgeable end users. It provides information for the installation and use of the AOC-PTG-i1S add-on card.

About this Add-on Card

The AOC-PTG-i1S 10-Gigabit Ethernet Adapter is a flexible and scalable Ethernet adapter designed for today's demanding data center environments. Based on Intel's 82599EN 10GbE network controller, the AOC-PTG-i1S addresses the demanding needs of next-generation data centers by providing such features as Fiber Channel over Ethernet (FCoE) support, iSCSI remote boot, and proven reliable performance. The AOC-PTG-i1S is designed in a proprietary form factor for the Supermicro TwinPro server systems.

An Important Note to the User

All images and layouts shown in this user's guide are based upon the latest PCB Revision available at the time of publishing. The card you have received may or may not look exactly the same as the graphics shown in this user's guide.

Returning Merchandise for Service

A receipt or copy of your invoice marked with the date of purchase is required before any warranty service will be rendered. You can obtain service by calling your vendor for a Returned Merchandise Authorization (RMA) number. When returning the motherboard to the manufacturer, the RMA number should be prominently displayed on the outside of the shipping carton, and the shipping package is mailed prepaid or hand-carried. Shipping and handling charges will be applied for all orders that must be mailed when service is complete. For faster service, you can also request a RMA authorization online (http://www.supermicro.com/RmaForm/).

This warranty only covers normal consumer use and does not cover damages incurred in shipping or from failure due to the alternation, misuse, abuse or improper maintenance of products.

During the warranty period, contact your distributor first for any product problems.
Conventions Used in the User's Guide

Pay special attention to the following symbols for proper system installation and to prevent damage to the system or injury to yourself:

**Warning:** Important information given to ensure proper system installation or to prevent damage to the components or injury to yourself.

**Note:** Additional information given to differentiate between various models or provides information for correct system setup.

Naming Convention

Chapter 1

Overview

1-1 Overview

Congratulations on purchasing your add-on card from an acknowledged leader in the industry. Supermicro products are designed with the utmost attention to detail to provide you with the highest standards in quality and performance. For product support and updates, please refer to our website at http://www.supermicro.com/products/nfo/networking.cfm#adapter.

1-2 Key Features

The key features of this add-on card include the following:

• Single SFP+ Connector
• Proprietary form factor
• PCI Express 2.0 (up to 5GT/s)
• Intel® QuickData Technology
• VMDq, Next-Generation VMDq, and PC-SIG SR-IOV for Virtualized Environments
• Load Balancing on Multiple CPUs
• iSCSI Remote Boot Support
• Fibre Channel over Ethernet (FCoE) Support
• Support for most Network Operating Systems (NOS)
• Supports both DAC Twin Axial and LC Fiber-Optic Cables
• RoHS compliant 6/6

1-3 Specifications

General

• Intel® 82599EN 10GbE controller
• Proprietary form factor
• Single SFP+ port
• PCI-E 2.0 x8 (5GT/s) interface

• Load balancing on multiple CPUs

• iSCSI remote boot support

• Fibre Channel over Ethernet (FCoE) support

• Intel® PROSet Utility for Windows® Device Manager

I/O Features
• Intel® QuickData Technology: DMA engine that enhances data acceleration and lowers CPU usage

• Direct Cache Access (DCA) to avoid cache misses

• MSI-X support to minimize the overhead of interrupts, allowing load-balancing between multiple cores/CPUs

• Tx/Rx IP, SCTP, TCP and UDP checksum offloading capabilities (IPv4, IPv6)

• Receive and transmit side scaling for Windows environments and scalable I/O for Linux environments

Virtualization Features
• Supports virtualization features such as VMDq, Next-Generation VMDq (64 queues per port) and PC-SIG SR-IOV implementation

• IPv6 Offloading

• Flexible Port Partitioning: 32 Virtual Functions

• Advanced packet filtering

• VLAN support to allow creation of multiple VLAN segments

Manageability Features
• Preboot eXecution Environment (PXE) support

• Simple Network Management Protocol (SNMP) and Remote
• Network Monitoring (RMON) statistics counters

• iSCSI remote boot

**OS Support**

• RedHat EL, SuSe SLES

• FreeBSD 8.0

• VMware ESX

**Cables Support**

• SFP+ direct attached twin axial cables, up to 7 meters

• LC-LC fiber-optic SR cables, up to 300 meters (optional SFP+ transceiver is required)

• LC-LC fiber-optic LR cables, up to 3000 meters (optional SFP+ transceiver is required)

**Operating Conditions**

• Operating temperature: 0°C to 55°C (32°F to 131°F)

**Physical Dimensions**

• Card PCB dimensions: 255.08mm (10.04in) x 19.74mm (0.78in) (L x W)

**Optional Accessories**

• AOC-E10GSFPSR: SFP+ transceiver module for short range fiber cables (up to 300m)

• AOC-E10GSFPLR: SFP+ transceiver module for long range fiber cables (up to 3000m)
- AOC-TSR-FS: SFP+ transceiver module for short range fiber cables (up to 300m)
- AOC-GBIC-FSR2: SFP+ transceiver module for short range fiber cables (up to 300m), single speed (10Gb)
- CBL-0347L: 39.37" (100cm) 10GbE SFP+ to SFP+, Twinax copper cable
- CBL-0456L: 78.74" (200cm) 10GbE SFP+ to SFP+, Twinax copper cable
- CBL-0348L: 118.11" (300cm) 10GbE SFP+ to SFP+, Twinax copper cable
- CBL-0349L: 196.85" (500cm) 10GbE SFP+ to SFP+, Twinax copper cable

**Compliance/Environmental**
- RoHS Compliant 6/6, Pb Free
2-1 Add-On Card Image and Layout

The AOC-PTG-i1S Image

The AOC-PTG-i1S Layout

2-2 Major Components

The following major components are on the AOC-PTG-i1S:

1. Intel 82599EN 10GbE Controller
2. SFP+ Port
3. LED1 and LED2 Indicators
2-3 Connectors and PCB LEDs

SFP+ Port

A single SFP+ 10GbE adapter port is located on the add-on card. Connect a DAC Twin Axial cable or an LC Fiber-Optic cable to the port to provide 10-Gigabit Ethernet communication. Refer to the add-on card layout on page 2-1 for the location of the SFP+ port.

LED1 and LED2 Indicators

There are two link LEDs (LED1 and LED2) located on the PCB underneath the SFP+ port (refer to the add-on card layout on page 2-1 for the location of the LEDs). A solid green LED color indicates a connection speed of 10Gb/s. A solid yellow LED color indicates a connection speed of 1Gb/s.

Chapter 3

Installation

3-1 Static-Sensitive Devices

Electrostatic Discharge (ESD) can damage electronic components. To avoid damaging your add-on card, it is important to handle it very carefully. The following measures are generally sufficient to protect your equipment from ESD.

Precautions

• Use a grounded wrist strap designed to prevent static discharge.

• Touch a grounded metal object before removing the add-on card from the antistatic bag.

• Handle the add-on card by its edges only; do not touch its components, or peripheral chips.

• Put the add-on card back into the antistatic bags when not in use.

• For grounding purposes, make sure that your system chassis provides excellent conductivity between the power supply, the case, the mounting fasteners and the add-on card.

Unpacking

The add-on card is shipped in antistatic packaging to avoid static damage. When unpacking your component or your system, make sure that the person handling it is static protected.

⚠️ Warning: To avoid damaging your components and to ensure proper installation, be sure to always connect the power cord last, and always remove it before adding, removing or changing any hardware components.
3-2  Before Installation

To install the add-on card properly, be sure to follow the instructions below.

1. Power down the system.

2. Remove the power cord from the wall socket.

3. Use industry standard anti-static equipment (such as gloves or wrist strap) and follow the instructions listed on page 3-1 to avoid damage caused by ESD.

4. Familiarize yourself with the server, motherboard, and/or chassis documentation.

5. Confirm that your operating system includes the latest updates and hotfixes.

3-3  Installing the Add-on Card

Follow the steps below to install the add-on card into your system.

1. Remove the server cover and, if necessary, set aside any screws for later use.

2. Remove the add-on card slot cover. If the case requires a screw, place the screw aside for later use.

3. Position the add-on card in the slot directly over the connector, and gently push down on both sides of the card until it slides into the PCI connector.

4. Secure the add-on card to the chassis. If required, use the screw that you previously removed.

5. Attach any necessary external cables to the add-on card.

6. Replace the chassis cover.

7. Plug the power cord into the wall socket, and power up the system.
3-4 Installing the Windows Operating System

Follow the steps below to install the drivers needed for your Windows OS support. The controller comes with a driver on the CD-ROM CDR-NIC.

1. Run the CDR-NIC. (If you do not have a product CD-ROM, download drivers from the Supermicro Support Website and then transfer them to your system.)

2. When the SUPERMICRO window appears, click on the computer icon next to the product model.

   **Note:** If the *FOUND NEW HARDWARE WIZARD* screen displays on your system, click CANCEL.

3. Click on INSTALL DRIVERS AND SOFTWARE.

4. Follow the prompts to complete the installation.
3-5 Installing the Linux Operating System

Follow the steps below to install the driver to a Linux system.

Build a Binary RPM Package
1. Run ‘rpmbuild -tb <filename.tar.gz>’
2. Replace <filename.tar.gz> with the specific filename of the driver.

Note: For the build to work properly, the current running kernel MUST match the version and configuration of the installed kernel sources. If you have just recompiled the kernel, reboot the system at this time.

3-6 Building the Driver Manually

Follow the instructions below to build the driver manually.
1. Move the base driver tar file to the directory of your choice. For example

   /home/username/ixgbe

   or

   /usr/local/src/ixgbe

2. Untar/unzip archive, where <x.x.x> is the version number for the driver tar file:

   tar zxf ixgbe-x.x.x.tar.gz

3. Change to the driver src directory, where <x.x.x> is the version number for the driver tar:

   cd ixgbe-x.x.x/src/

4. Compile the driver module:

   make install

The binary will be installed as:

/lib/modules/[KERNEL_VERSION]/kernel/drivers/net/ixgbe/ixgbe.[k]o

The install locations listed above are the default locations. They might not be correct for certain Linux distributions. For more information, see the ldistrib.txt file included in the driver tar.
Note: IXGBE_NO_LRO is a compile time flag. The user can enable it at compile time to remove support for LRO from the driver. The flag is used by adding CFLAGS_EXTRA="-DIXGBE_NO_LRO" to the make file when it’s being compiled.

make CFLAGS_EXTRA="-DIXGBE_NO_LRO" install

5. Load the module:

For kernel 2.6.x, use the modprobe command:

    modprobe ixgbe <parameter>=<value>

For 2.6 kernels, the insmod command can be used if the full path to the driver module is specified. For example:

    insmod /lib/modules/<KERNEL VERSION>/kernel/drivers/net/ixgbe/ixgbe.ko

In addition, when using 2.6-based kernels, make sure that older ixgbe drivers are removed from the kernel before loading the new module. To do this, use:

    rmmod ixgbe; modprobe ixgbe

6. Assign an IP address to the interface by entering the following, where x is the interface number:

    ifconfig ethx <IP_address> netmask <netmask>

7. Verify that the interface works. Enter the following, where <IP_address> is the IP address for another machine on the same subnet as the interface that is being tested:

    ping <IP_address>
The products sold by Supermicro are not intended for and will not be used in life support systems, medical equipment, nuclear facilities or systems, aircraft, aircraft devices, aircraft/emergency communication devices or other critical systems whose failure to perform be reasonably expected to result in significant injury or loss of life or catastrophic property damage. Accordingly, Supermicro disclaims any and all liability, and should buyer use or sell such products for use in such ultra-hazardous applications, it does so entirely at its own risk. Furthermore, buyer agrees to fully indemnify, defend and hold Supermicro harmless for and against any and all claims, demands, actions, litigation, and proceedings of any kind arising out of or related to such ultra-hazardous use or sale.
