The information in this User’s Manual has been carefully reviewed and is believed to be accurate. The vendor assumes no responsibility for any inaccuracies that may be contained in this document, makes no commitment to update or to keep current the information in this manual, or to notify any person or organization of the updates. Please Note: For the most up-to-date version of this manual, please see our web site at www.supermicro.com.

Super Micro Computer, Inc. ("Supermicro") reserves the right to make changes to the product described in this manual at any time and without notice. This product, including software, if any, and documentation may not, in whole or in part, be copied, photocopied, reproduced, translated or reduced to any medium or machine without prior written consent.

IN NO EVENT WILL SUPERMICRO BE LIABLE FOR DIRECT, INDIRECT, SPECIAL, INCIDENTAL, SPECULATIVE OR CONSEQUENTIAL DAMAGES ARISING FROM THE USE OR INABILITY TO USE THIS PRODUCT OR DOCUMENTATION, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. IN PARTICULAR, SUPERMICRO SHALL NOT HAVE LIABILITY FOR ANY HARDWARE, SOFTWARE, OR DATA STORED OR USED WITH THE PRODUCT, INCLUDING THE COSTS OF REPAIRING, REPLACING, INTEGRATING, INSTALLING OR RECOVERING SUCH HARDWARE, SOFTWARE, OR DATA.

Any disputes arising between manufacturer and customer shall be governed by the laws of Santa Clara County in the State of California, USA. The State of California, County of Santa Clara shall be the exclusive venue for the resolution of any such disputes. Super Micro’s total liability for all claims will not exceed the price paid for the hardware product.

California Best Management Practices Regulations for Perchlorate Materials: This Perchlorate warning applies only to products containing CR (Manganese Dioxide) Lithium coin cells. "Perchlorate Material-special handling may apply. See www.dtsc.ca.gov/hazardouswaste/perchlorate"

WARNING: Handling of lead solder materials used in this product may expose you to lead, a chemical known to the State of California to cause birth defects and other reproductive harm.

**Returning Merchandise for Service**

A receipt or copy of your invoice marked with the date of purchase is required before any warranty service will be rendered. You can obtain service by calling your vendor for a Returned Merchandise Authorization (RMA) number. When returning to the manufacturer, the RMA number should be prominently displayed on the outside of the shipping carton, and mailed prepaid or hand-carried. Shipping and handling charges will be applied for all orders that must be mailed when service is complete.

For faster service, RMA authorizations may be requested online (http://www.supermicro.com/support/rma/).

Whenever possible, repack the backplane in the original Supermicro box, using the original packaging materials. If these are no longer available, be sure to pack the backplane in an anti-static bag and inside the box. Make sure that there is enough packaging material surrounding the backplane so that it does not become damaged during shipping.

This warranty only covers normal consumer use and does not cover damages incurred in shipping or from failure due to the alteration, misuse, abuse or improper maintenance of products.

During the warranty period, contact your distributor first for any product problems.
Chapter 1

Safety Guidelines

To avoid personal injury and property damage, carefully follow all the safety steps listed below when accessing your system or handling the components.

1-1 ESD Safety Guidelines

*Electrotatic Discharge (ESD) can damage electronic components. To prevent damage to your system, it is important to handle it very carefully. The following measures are generally sufficient to protect your equipment from ESD.*

- Use a grounded wrist strap designed to prevent static discharge.
- Touch a grounded metal object before removing a component from the antistatic bag.
- Handle the backplane by its edges only; do not touch its components, peripheral chips, memory modules or gold contacts.
- When handling chips or modules, avoid touching their pins.
- Put the backplane and peripherals back into their antistatic bags when not in use.

1-2 General Safety Guidelines

- Always disconnect power cables before installing or removing any components from the computer, including the backplane.
- Disconnect the power cable before installing or removing any cables from the backplane.
- Make sure that the backplane is securely and properly installed on the motherboard to prevent damage to the system due to power shortage.
1-3  An Important Note to Users

All images and layouts shown in this user’s guide are based upon the latest PCB Revision available at the time of publishing. The card you have received may or may not look exactly the same as the graphics shown in this manual.

1-4  Introduction to the SAS-846EL Backplane

The SAS-846EL backplane has been designed to utilize the most up-to-date technology available, providing your system with reliable, high-quality performance.

This manual reflects SAS-846EL Revision 1.01, the most current release available at the time of publication. Always refer to the Supermicro Web site at www.supermicro.com for the latest updates, compatible parts and supported configurations.
Chapter 2

Jumper Settings and Pin Definitions

2-1 Front Connectors and Jumpers

![Figure 2-1: Front Connectors](image)

Front Connectors

1. and 2. Primary and secondary \(\text{I}^{2}\text{C}\) connectors (optional)
2. Power connectors: PWR1, PWR2, PWR3, PWR4, PWR5, and PWR6
3. Primary and secondary flash chip
4. Primary and secondary expander chip
5. EPP connectors: J24 and J25
6. Fan connectors: Fan1, Fan2, and Fan3
7. SAS connector: PRI_J0
8. SAS connector: PRI_J1
9. SAS connector: PRI_J2
10. SAS connectors SEC_J0 (not available in EL1 single port backplane)
11. SAS connector: SEC_J1 (not available in EL1 single port backplane)
12. SAS connector: SEC_J2 (not available in EL1 single port backplane)
2-2 Front Connector and Pin Definitions

1. and 2. Optional Primary and Secondary I²C Connectors
   The optional I²C connectors are connected to the CSE-PTJBOD-CB2 board and are used to monitor the power supply status and to control the fans. See the table on the right for pin definitions.

<table>
<thead>
<tr>
<th>I²C Connector Pin Definitions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pin#</td>
</tr>
<tr>
<td>1</td>
</tr>
<tr>
<td>2</td>
</tr>
<tr>
<td>3</td>
</tr>
<tr>
<td>4</td>
</tr>
</tbody>
</table>

3. Backplane Main Power Connectors
   The 4-pin connectors, designated PWR1, PWR2, PWR3, PWR4, PWR5, and PWR6, provide power to the backplane. See the table on the right for pin definitions.

<table>
<thead>
<tr>
<th>Backplane Main Power 4-Pin Connector</th>

</thead>
<tbody>
<tr>
<td>Pin#</td>
</tr>
<tr>
<td>1</td>
</tr>
<tr>
<td>2 and 3</td>
</tr>
<tr>
<td>4</td>
</tr>
</tbody>
</table>

4. Primary and Secondary Flash Chips
   The primary and secondary flash chips enhance the backplane memory.

5. Primary and Secondary Expander Chips
   This primary and secondary expander chips allow the backplane to support dual ports, cascading, and failover.

6. EPP Ports
   The EPP ports are used for manufacturer diagnostic purposes only.
7. Fan Connectors

The 3-pin connectors, designated FAN1, FAN2, and FAN3, provide power to the fans. See the table on the right for pin definitions.

<table>
<thead>
<tr>
<th>Fan Connectors</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pin#</td>

</tr>
</tbody>
</table>

8 - 13. SAS Ports

The primary and secondary sets of SAS ports provide expander features including cascading and failover. From right to left, the ports are primary 1/2/3 and secondary 1/2/3.
## 2-3 Front Jumper Locations and Pin Definitions

### Explanation of Jumpers

To modify the operation of the backplane, jumpers can be used to choose between optional settings. Jumpers create shorts between two pins to change the function of the connector. Pin 1 is identified with a square solder pad on the printed circuit board. Note: On two pin jumpers, "Closed" means the jumper is on and "Open" means the jumper is off the pins.

<table>
<thead>
<tr>

Chapter 3

Dual Port and Cascading Configurations

3-1 Single and Dual Port Expanders

Single Ports

SAS-846EL1 backplanes have a single-port expander that access all twenty-four drives and supports cascading.

Dual Ports

SAS-846EL2 backplanes have dual-port expanders that access all twenty-four drives. These dual-port expanders support cascading, failover, and multipath.

Figure 3-1: SAS-846EL2 Dual Port Configuration

Figure 3-2: SAS-846EL1 Single Port Configuration
3-2 Failover

The SAS-846EL2 backplane has two expanders which allow effective failover.

**Single Host Bus Adapter**

In a single host bus configuration, the backplane connects to one Host Bus Adapter (HBA).

![Figure 3-3: Single HBA](image)

**Single Host Bus Adapter Failover**

If the expander or data path in Port A fails, the system automatically switches to Port B.

![Figure 3-4: Single HBA Failover](image)

**Dual Host Bus Adapter**

In a Dual Host Bus Configuration, the backplane connects to two Host Bus Adapters (HBA).

![Figure 3-5: Dual HBA](image)

**Dual Host Bus Adapter Failover**

If the expander or data path in Port A fails, the system automatically switches to Port B. This maintains a full connection to all drives.

![Figure 3-6: Dual HBA Failover](image)
3-3 Chassis Power Card and Support Cables

Chassis Power Card

In a cascaded configuration, the first chassis includes a motherboard and at least one Host Bus Adapter (HBA). Other servers in this enclosed system, include a power card. This section describes the supported power card for the SAS-846 series backplane.

For more information, see the PCC-JBPWR2 power card manual. This manual can be found at http://www.supermicro.com or as an appendix in the SAS-846EL chassis manual.

<table>

Figure 3-7: Chassis Power Card (Sold Separately)
Connecting an Internal Host Bus Adapter to the Backplane

The following section lists the most common cables used to connect the Host Bus Adapter (HBA) to the backplane.

Supported Internal HBA Cables

Use the following listed cables to create connections between the internal HBA and SAS-846EL backplane. The cables required depend on the HBA connector.

**Cable Name:** iPass TO 4-lane

**Part #:** CBL-0117L  
**Length:** 46 cm (18 inches)

**Description:** This cable has one SFF-8484 (32 pin) connector on one end and iPass (SFF-8087/mini-sas) connector (36 pins) at the other. This cable connects from the HBA to the SAS-846EL backplane.
**Cable Name:** iPass (mini SAS) to iPass (mini SAS)

**Part #:** CBL-0108L-02  
**Length:** 39 cm (15 inches)

**Part #:** CBL-0109L-02  
**Length:** 22 cm (9 inches)

**Part #:** CBL-0110L-02  
**Length:** 18 cm (7 inches)

**Description:** This cable has an iPass (SFF-8087/mini-sas) connector (36 pins) at each end. It connects from the HBA to the SAS-846EL backplane.
Connecting an External Host Bus Adapter to the Backplane

This backplane supports external Host Bus Adapters. In this configuration, the HBA and the backplane are in different physical chassis. This allows a JBOD configuration system to connect to the other system that has a HBA.

Single External Host Bus Adapter

![Diagram of Single External Host Bus Adapter](image1.png)

Figure 3-10: Single External Host Adapter

Dual External Host Bus Adapter

![Diagram of Dual External Host Bus Adapter](image2.png)

Figure 3-11: Dual External Host Bus Adapter
Supported External HBA to Backplane Cable

Use the following cable if your external HBA has an InfiniBand connector.

Figure 3-12: SAS InfiniBand Cable (CBL-0200L)

Cable Name: SAS InfiniBand to Mini SAS X4 1M cable, PBF
Part #: CBL-0200L  Length: 1 meter

Description: This cable has an InfiniBand connector (SFF-8470) on one end and an SFF-8088-1X (26-pins) at the other end.
Connecting Multiple Backplanes in a Single Channel Environment

This section describes the cables used when cascading from a single HBA. These connections use CBL-0167L internal cables and CBL-0166L external cables.

Figure 3-13: Single HBA Configuration
Single HBA Configuration Cables

**Single Port Cable Assembly**

![Figure 3-14: Single Port Internal Cable (CBL-0167L)](image)

**Cable Name:** SAS EL2/EL1 Backplane Cable (Internal) with 2-port Cascading Cable, 68 cm

**Part #:** CBL-0167L (SFF-8087 to SFF-8088 x1)

**Ports:** Single

**Placement:** Internal cable

**Description:** Internal cable. Connects the backplane to the Host Bus Adapter (HBA) or external port. Used in single port environments.

![Figure 3-15: External Cable (CBL-0166L)](image)

**Cable Name:** SAS EL2/EL1 Cascading Cable (External), 68cm

**Part #:** CBL-0166L (SFF-8088 1x to SFF-8088 x1)

**Ports:** Single or Dual

**Placement:** External cable

**Description:** External cascading cable. Connects ports between servers. With most connectors, use one cable for single port connections and two cables for dual port connections.
Connecting Multiple Backplanes in a Dual Channel Environment

This section describes the cables used when cascading from dual HBAs. These connections use CBL-0168L internal cables and CBL-0166L external cables.

Figure 3-16: Dual HBA Configuration
Dual HBA Configuration Cables

Dual Port Cable Assembly

Figure 3-17: Dual Port Internal Cable (CBL-0168L)

**Cable Name:** SAS Dual-port Cable Assembly, 68/76cm  
**Part #:** CBL-0168L  
**Placement:** Internal cable  
**Ports:** Dual

**Description:** Internal cascading cable. Connects the backplane to the Host Bus Adapter (HBA) or external port. Used in dual port environments.

Figure 3-18: External Cable (CBL-0166L)

**Cable Name:** SAS EL2/EL1 Cascading Cable (External), 68cm  
**Part #:** CBL-0166L  
**Placement:** External cable  
**Ports:** Single or Dual

**Description:** External cascading cable. Connects ports between servers. Use one cable for single port connections and two cables for dual port connections.
3-4 Supported Cascading Configurations

Cascading allows the system to access data at a faster rate by allowing several backplanes to share resources to reduce latency time.

The first backplane in a cascaded system requires a motherboard and HBA. Other servers require a power control card with no motherboard and no HBA. For more information, see the SC846 Chassis Manual available at www.supermicro.com.

![Figure 3-19: Simple Cascaded Configuration](image-url)
Server System with Single SAS HBA

The expanders allow horizontal branching. This configuration also applies to dual ports.
