**Returning Merchandise for Service**

A receipt or copy of your invoice marked with the date of purchase is required before any warranty service will be rendered. You can obtain service by calling your vendor for a Returned Merchandise Authorization (RMA) number. When returning to the manufacturer, the RMA number should be prominently displayed on the outside of the shipping carton, and mailed prepaid or hand-carried. Shipping and handling charges will be applied for all orders that must be mailed when service is complete.

For faster service, RMA authorizations may be requested online (http://www.supermicro.com/support/rma/).

Whenever possible, repack the backplane in the original Supermicro box, using the original packaging materials. If these are no longer available, be sure to pack the backplane in an anti-static bag and inside the box. Make sure that there is enough packaging material surrounding the backplane so that it does not become damaged during shipping.

This warranty only covers normal consumer use and does not cover damages incurred in shipping or from failure due to the alteration, misuse, abuse or improper maintenance of products.

During the warranty period, contact your distributor first for any product problems.
Chapter 1

Safety Guidelines

To avoid personal injury and property damage, carefully follow all the safety steps listed below when accessing your system or handling the components.

1-1 ESD Safety Guidelines

Electrostatic Discharge (ESD) can damage electronic components. To prevent damage to your system, it is important to handle it very carefully. The following measures are generally sufficient to protect your equipment from ESD.

- Use a grounded wrist strap designed to prevent static discharge.

- Touch a grounded metal object before removing a component from the antistatic bag.

- Handle the backplane by its edges only; do not touch its components, peripheral chips, memory modules or gold contacts.

- When handling chips or modules, avoid touching their pins.

- Put the card and peripherals back into their antistatic bags when not in use.

1-2 General Safety Guidelines

- Always disconnect power cables before installing or removing any components from the computer, including the backplane.

- Disconnect the power cable before installing or removing any cables from the backplane.

- Make sure that the backplane is securely and properly installed on the motherboard to prevent damage to the system due to power shortage.
1-3 Version

The BPN-SAS3-836EL backplane has been designed to utilize the most up-to-date technology available, providing your system with reliable, high-quality performance.

This manual reflects SAS3-836EL1 and SAS3-836EL2 Revision 1.01, the most current release available at the time of publication. Always refer to the Supermicro Web site at www.supermicro.com for the latest updates, compatible parts and supported configurations.

All images and layouts in this user’s guide are based upon the latest PCB revision available at the time of publishing. The backplane you have received may not look exactly the same as the graphics in this manual.
Chapter 2

Jumper Settings and Pin Definitions

2-1 Front Connectors Locations

1. Power connectors: PWR1, PWR2, PWR3 and PWR4 (4-pin)
2. Primary SAS connectors: PRI_J0 (J20), PRI_J1 (J21), PRI_J2 (J22), and PRI_J3 (J23)
3. Secondary SAS connectors: SEC_J0 (J30), SEC_J1 (J31), SEC_J2 (J32), and SEC_J3 (J33)
4. Primary expander chip
5. Secondary expander chip
6. I²C connector: PRI_I2C1 (4-pin)
7. Primary UART connector: UART_P1 (J19; 4-pin)
8. Secondary UART connector: UART_S1 (J35; 4-pin)
9. Primary SDB (J24, 4-pin)
10. Secondary SDB (J36, 4-pin)
11. SMB connector: JBOD controller (J17, 4-pin)
12. Overheat_Fail2 (2-pin)

Figure 2-1. Front Connectors
2-2  Front Connector and Pin Definitions

1. Backplane Main Power Connectors

The 4-pin connectors, designated PWR1, PWR2, PWR3 and PWR4, provide power to the backplane. See the table on the right for pin definitions.

<table>
<thead>
<tr>
<th>Pin#</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>+12V</td>
</tr>
<tr>
<td>2 and 3</td>
<td>Ground</td>
</tr>
<tr>
<td>4</td>
<td>+5V</td>
</tr>
</tbody>
</table>

2-3. SAS Connectors

The primary and secondary sets of SAS connectors provide expander features including cascading and failover.

4-5. Expander Chips

These primary and secondary expander chips allow the backplane to support dual ports, cascading, and failover.

6-10. I²C Connector, UART Connectors, SDB Connectors

The I²C connector, the UART connectors, and the SDB connectors are for manufacturing diagnostic purposes only.

11. SMB Connector

This header provides for a connection with an optional JBOD controller board.

12. OVERHEAT_FAIL2 Connector

This header can be connected to an external overheat LED, if desired.
2-3 Front Jumper Locations and Settings

Figure 2-2. Front Jumper Locations and Settings

<table>
<thead>
<tr>
<th>General Jumper Settings</th>
</tr>
</thead>
<tbody>
<tr>
<td>Jumper</td>
</tr>
<tr>
<td>ACTLED1</td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

Explanation of Jumpers
To modify the operation of the backplane, jumpers can be used to choose between optional settings. Jumpers create shorts between two pins to change the function of the connector. Pin 1 is identified with a square solder pad on the printed circuit board. Note: On two pin jumpers, "Closed" means the jumper is on and "Open" means the jumper is off the pins.

Chapter 3

Dual Port and Cascading Configurations

3-1 Single and Dual Port Expanders

SAS connectors PRI-J0 to J3 and SEC-J0 to J3 are bidirectional and can be treated as input or output.

Single Ports

BPN-SAS3-836EL1 backplanes have a single port expander that accesses all of the drives and supports cascading.

Dual Ports

BPN-SAS3-836EL2 model backplanes have dual-port expanders that access all of the hard drives. These dual-port expanders support cascading, failover, and recovery.

Figure 3-1. BPN-SAS3-836EL1 Single Port Configuration

Figure 3-2. BPN-SAS3-836EL2 Dual Port Configuration
3-2 Failover

The BPN-SAS3-836EL2 model backplane has two expanders which enable effective failover and recovery.

Single Host Bus Adapter

In a single host bus configuration, the backplane connects to one host bus adapter.

![Figure 3-3. Single HBA](image)

Single Host Bus Adapter Failover

If the expander or data path in Port A fails, the system automatically switches to Port B with application software or failover support.

![Figure 3-4. Single HBA Failover](image)
3-3 Failover with RAID Cards and Multiple HBAs

The BPN-SAS3-836EL backplane may be configured for failover with multiple HBAs using either RAID controllers or HBAs to achieve failover protection.

**RAID Controllers:** If RAID controllers are used, then the failover is accomplished through port failover on the same RAID card.

**HBAs:** If multiple HBAs are used to achieve failover protection and load balancing, Linux MPIO software must be installed and correctly configured to perform the load balancing and failover tasks.

**Dual Host Bus Adapter**

In a dual host bus configuration, the backplane connects to two HBAs.

![](image)

**Figure 3-5. Dual HBA**

**Dual Host Bus Adapter Failover**

If the expander or data path in Port A fails, the system automatically switches to Port B. This maintains a full connection to all drives.

![](image)

**Figure 3-6. Dual HBA Failover**

**Important:** For RAID controllers, redundancy is achieved through port failover. For multiple HBAs MPIO software is required to achieve failover protection.
3-4 Chassis Control Board

In a cascaded configuration, the first chassis includes a motherboard and at least one host bus adapter (HBA). Other JBODs in this enclosed system must be equipped with a control card. This section describes the supported control board for the BPN-SAS3-836EL series backplane.

For more information, see the Supermicro web site at www.supermicro.com.

<table>

<td>Allows the chassis to be used as a JBOD (Just a Bunch of Disks) system, which supports IPMI for remote on/off control.</td>
</tr>
</tbody>
</table>

Figure 3-7. Chassis Control Board (Sold Separately)
3-5 Support Cables

Connecting an Internal HBA to the Backplane
The following section lists the most common cables used to connect the HBA to the backplane.

![Diagram of Single Internal Host Bus Adapter]

**Figure 3-8. Single Internal Host Bus Adapter**

![Diagram of Dual Internal Host Bus Adapter]

**Figure 3-9. Dual Internal Host Bus Adapter**

**IMPORTANT:** See Section 3-3 of this manual, *Failover with RAID Cards and Multiple HBAs* for important information on supported configurations.
**Supported Internal HBA Cables**

Use the following cables to create connections between the internal HBA and BPN-SAS3-836EL model backplane. The cables required depend upon the HBA connector.

**Cable Name:** Internal iPass (Mini-SAS) to HD (Mini-SAS)

<table>
<thead>
<tr>
<th>Part #</th>
<th>Length</th>
</tr>
</thead>
<tbody>
<tr>
<td>CBL-SAST-0508-01</td>
<td>50 cm (19 inches)</td>
</tr>
<tr>
<td>CBL-SAST-0507-01</td>
<td>80 cm (31 inches)</td>
</tr>
</tbody>
</table>

Description: This cable has an iPass (SFF-8087/Mini-SAS) connector (36-pin) at one end and a Mini-SAS HD (SFF-8643) connector at the other end. It connects from the SAS3 HBA to the BPN-SAS3-836EL model backplane.

**Cable Name:** Internal HD (Mini-SAS) to HD (Mini-SAS)

<table>
<thead>
<tr>
<th>Part #</th>
<th>Length</th>
</tr>
</thead>
<tbody>
<tr>
<td>CBL-SAST-0568</td>
<td>35 cm (13 inches)</td>
</tr>
<tr>
<td>CBL-SAST-0593</td>
<td>60 cm (23 inches)</td>
</tr>
</tbody>
</table>

Description: This cable has a Mini-SAS HD (SFF-8643) connector at both ends. It connects from the SAS3 HBA to the BPN-SAS3-836EL model backplane.
Connecting an External HBA to the Backplane

This backplane supports external host bus adapters. In this configuration, the HBA and the backplane are in different physical chassis. This allows a JBOD (Just a Bunch Of Disks) configuration from an existing system.

**Single External Host Bus Adapter**

![Diagram of Single External Host Adapter]

**Dual External Host Bus Adapter**

![Diagram of Dual External Host Bus Adapter]

**IMPORTANT:** See Section 3-3 of this manual, *Failover with RAID Cards and Multiple HBAs* for important information on supported configurations.
Connecting Multiple Backplanes in a Single Channel Environment

This section describes the cables used when cascading from a single HBA. These connections use CBL-SAST-0531 internal cables and CBL-SAST-0573 external cables.

Figure 3-13. Single HBA Configuration
Single HBA Configuration Cables

Figure 3-14: External Mini-SAS HD to External Mini-SAS HD Cable

**Cable Name:** 1 Meter External Mini-SAS HD to External Mini-SAS HD Cable  
**Part #:** CBL-SAST-0573  
**Ports:** Single  
**Placement:** External Cable  
**Description:** External cascading cable, connects ports between servers and JBODs.

Figure 3-15: Mini-SAS HD Internal to External Adapter

**Cable Name:** 16-port Mini-SAS HD Internal to External Cable Adapter with LP Bracket  
**Part #:** AOM-SAS3-16I16E-ADP-LP  
**Ports:** Four wide-ports (sixteen ports total)  
**Placement:** Internal cable with adapter  
**Description:** Internal cable, connects the SAS3 backplane to external ports.
Connecting Multiple Backplanes in a Dual Channel Environment

This section describes the cables used when cascading from dual HBAs. These connections use CBL-SAST-0531 internal cables and CBL-SAST-0573 external cables.

![Diagram of Dual HBA Configuration](image)

**Figure 3-16. Dual HBA Configuration**

**IMPORTANT:** See Section 3-3 of this manual, *Failover with RAID Cards and Multiple HBAs* for important information on supported configurations.
