Returning Merchandise for Service

A receipt or copy of your invoice marked with the date of purchase is required before any warranty service will be rendered. You can obtain service by calling your vendor for a Returned Merchandise Authorization (RMA) number. When returning to the manufacturer, the RMA number should be prominently displayed on the outside of the shipping carton, and mailed prepaid or hand-carried. Shipping and handling charges will be applied for all orders that must be mailed when service is complete.

For faster service, RMA authorizations may be requested online (http://www.supermicro.com/support/rma/).

Whenever possible, repack the backplane in the original Supermicro box, using the original packaging materials. If these are no longer available, be sure to pack the backplane in an anti-static bag and inside the box. Make sure that there is enough packaging material surrounding the backplane so that it does not become damaged during shipping.

This warranty only covers normal consumer use and does not cover damages incurred in shipping or from failure due to the alteration, misuse, abuse or improper maintenance of products.

During the warranty period, contact your distributor first for any product problems.
Chapter 1

Safety Guidelines

To avoid personal injury and property damage, carefully follow all the safety steps listed below when accessing your system or handling the components.

1-1 ESD Safety Guidelines

Electrostatic Discharge (ESD) can damage electronic components. To prevent damage to your system, it is important to handle it very carefully. The following measures are generally sufficient to protect your equipment from ESD.

• Use a grounded wrist strap designed to prevent static discharge.

• Touch a grounded metal object before removing a component from the antistatic bag.

• Handle the backplane by its edges only; do not touch its components, peripheral chips, memory modules or gold contacts.

• When handling chips or modules, avoid touching their pins.

• Put the card and peripherals back into their antistatic bags when not in use.

1-2 General Safety Guidelines

• Always disconnect power cables before installing or removing any components from the computer, including the BPN-SAS3-847EL series backplane.

• Make sure that the backplane is properly and securely on the motherboard to prevent damage to the system due to power outages.
1-3 An Important Note to Users

All images and layouts shown in this user’s guide are based upon the latest backplane revision available at the time of publishing. The card you have received may or may not look exactly the same as the graphics shown in this manual.

1-4 Introduction to the BPN-SAS3-847EL Backplane

The BPN-SAS3-847EL backplane has been designed to utilize the most up-to-date technology available, providing your system with reliable, high-quality performance.

This manual reflects BPN-SAS3-847EL Revision 1.00, the most current release available at the time of publication. Always refer to the Supermicro Web site at www.supermicro.com for the latest updates, compatible parts and supported configurations.

1-5 Overview of the BPN-SAS3-847EL1/EL2 Backplanes

The BPN-SAS3-847EL1 and BPN-SAS3-847EL2 model backplanes are identical, except that the BPN-SAS3-847EL2 backplane has duplicate secondary components which are not found on the BPN-SAS3-847EL1. The BPN-SAS3-847EL2 is divided into a two sections, with the primary components on the upper portion of the board and the secondary components on the lower portion. SAS3 backplanes are not compatible with legacy SAS (3 Gbps), SATA (1.5 Gbps) backplanes or lower.
Chapter 2
Connectors, Jumpers and LEDs

2-1 Front Connectors

Figure 2-1: BPN-SAS3-847EL1/EL2 Connectors and Components

1. Primary Expander Chip.

2. Secondary Expander Chip (not present on EL1 single port backplanes).

4. Primary SAS Ports: PRI_J0 (J20), PRI_J1 (J21), PRI_J2 (J22) and PRI_J3 (J23)

5. Secondary SAS Ports: SEC_J0 (J30), SEC_J1 (J31), SEC_J2 (J32), SEC_J3 (J33) (not present on EL1 single port backplanes).

6. Primary UART Connector: P_UART (J26) for manufacturer's use only.

7. Secondary UART Connector: S_UART (J36) for manufacturer's use, not present on EL1 backplanes.

8. Primary SDB Connector: P_SDB (J27), for manufacturer's use.

9. Secondary SDB Connector: S_SDB (J37), for manufacturer's use only, not present on EL1 backplanes.

10. I2C Connector: PRI_I2C1 (J29).

11. SMB Connector: SMB (J28).
2-2 Front Connector and Pin Definitions

1. - 2. Primary and Secondary Expander Chips
The primary and secondary expander chips allow the backplane to support dual port, cascading, and failover configurations.

3. Backplane Power Connectors
The 4-pin connectors, designated PWR1 - PWR5 provide power to the backplane. See the table on the right for pin definitions.

<table>
<thead>
<tr>
<th>Pin#</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>+12V</td>
</tr>
<tr>
<td>2 and 3</td>
<td>Ground</td>
</tr>
<tr>
<td>4</td>
<td>+5V</td>
</tr>
</tbody>
</table>

4. - 5. Primary and Secondary SAS Ports
The primary SAS connectors are designated PRI_J0 (J20), PRI_J1 (J21), PRI_J2 (J22) and PRI_J3 (J23). The secondary SAS Ports are designated SEC_J0 (J30), SEC_J1 (J31), SEC_J2 (J32) and SEC-J3 (J33) and are not present on EL1 single port backplanes.

6. - 7. Primary and Secondary UART Connectors
The primary UART connector is designated P_UART (J26). The secondary UART connector is designated S_UART(J36) and is not present on BPN-SAS3-847EL1. UART connectors are used for manufacturer’s diagnostic purposes only.
8. - 9. SDB Connectors

The Primary SDB connector is designated P_SDB (J27). The secondary SDB connector is designated S_SDB (J37). (Not present on BPN-SAS3-847EL1 backplanes) These are debug connectors used for the manufacturer's diagnostic purposes only.

10. I2C Connector

The I2C connector is designated PRI_I2C1 (J29).

11. SMB Connector

The SMB connector is designated SMB (J28).
2-3 Front Jumper Location and Settings

To modify the operation of the backplane, jumpers can be used to choose between optional settings. Jumpers create shorts between two pins to change the function of the connector. Pin 1 is identified with a square solder pad on the printed circuit board. Note: On two pin jumpers, "Closed" means the jumper is on and "Open" means the jumper is off the pins.

### Explanation of Jumpers

Chapter 3

Dual Port and Cascading Configurations

3-1 Single and Dual Port Expanders

SAS connectors PRI-J0 to J3 and SEC-J0 to J3 are bidirectional and can be treated as input or output.

Single Ports

BPN-SAS3-847EL1 backplanes have a single port expander that accesses all of the drives and supports cascading.

![Figure 3-1: BPN-SAS3-847EL1 Single Port Configuration](image)

Dual Ports

BPN-SAS3-847EL2 model backplanes have dual-port expanders that access all of the hard drives. These dual-port expanders support cascading, failover, and recovery.

![Figure 3-2: BPN-SAS3-847EL2 Dual Port Configuration](image)
3-2  Failover

The BPN-SAS3-847EL2 model backplane has two expanders which enable effective failover and recovery.

Single Host Bus Adapter

In a single host bus configuration, the backplane connects to one host bus adapter.

![Diagram of Single HBA](image)

Figure 3-3: Single HBA

Single Host Bus Adapter Failover

If the expander or data path in Port A fails, the system automatically switches to Port B with application software or failover support.

![Diagram of Single HBA Failover](image)

Figure 3-4: Single HBA Failover
3-3 Failover with RAID Cards and Multiple HBAs

The BPN-SAS3-847EL backplane may be configured for failover with multiple HBAs using either RAID controllers or HBAs to achieve failover protection.

**RAID Controllers:** If RAID controllers are used, then the failover is accomplished through port failover on the same RAID card.

**HBAs:** If multiple HBAs are used to achieve failover protection and load balancing, Linux MPIO software must be installed and correctly configured to perform the load balancing and failover tasks.

**Dual Host Bus Adapter**

In a dual host bus configuration, the backplane connects to two HBA's.

![Dual HBA Diagram](image)

**Dual Host Bus Adapter Failover**

If the expander or data path in Port A fails, the system automatically switches to Port B. This maintains a full connection to all drives.

![Dual HBA Failover Diagram](image)

**IMPORTANT:** For RAID controllers, redundancy is achieved through port failover. For multiple HBAs, MPIO software is required to achieve failover protection.
3-4 Connecting HBAs to the Backplane

Connecting an Internal HBA to the Backplane

The following section lists the most common cables used to connect the HBA to the backplane.

**Figure 3-7: Single Internal Host Bus Adapter**

**Figure 3-8: Dual Internal Host Bus Adapter**

Supported Internal HBA Cables

Use the following cables to create connections between the internal HBA and BPN-SAS3-847EL model backplane. The cables required depend upon the HBA connector.

**IMPORTANT**: See Section 3-3 of this manual, *Failover with RAID Cards and Multiple HBAs* for important information on supported configurations.
**Cable Name:** Internal iPass (Mini-SAS) to HD (Mini-SAS)  
**Part #:** CBL-SAST-0508-01  **Length:** 50 cm (19 inches)  
**Part #:** CBL-SAST-0507-01  **Length:** 80 cm (31 inches)

**Description:** This cable has an iPass (SFF-8087/Mini-SAS) connector (36-pin) at one end and a Mini-SAS HD (SFF-8643) connector at the other end. It connects from the SAS2 HBA to the BPN-SAS3-847EL model backplane.

**Cable Name:** Internal HD (Mini-SAS) to HD (Mini-SAS)  
**Part #:** CBL-SAST-0568  **Length:** 35 cm (13 inches)  
**Part #:** CBL-SAST-0593  **Length:** 60 cm (23 inches)  
**Part #:** CBL-SAST-0531  **Length:** 80 cm (31 inches)

**Description:** This cable has a Mini-SAS HD (SFF-8643) connector at both ends. It connects from the SAS3 HBA to the BPN-SAS3-847EL model backplane.
Connecting an External HBA to the Backplane

This backplane supports external host bus adapters. In this configuration, the HBA and the backplane are in different physical chassis. This allows a JBOD (Just a Bunch Of Drives) configuration from an existing system.

Single External Host Bus Adapter

Dual External Host Bus Adapter

**Figure 3-9: Single External Host Adapter**

**Figure 3-10: Dual External Host Bus Adapter**

**IMPORTANT:** See Section 3-3 of this manual, *Failover with RAID Cards and Multiple HBAs* for important information on supported configurations.
Connecting Multiple Backplanes in a Single Channel Environment

This section describes the cables used when cascading from a single HBA. These connections use CBL-SAST-0531 internal cables and CBL-SAST-0573 external cables.

Figure 3-11: Single HBA Configuration
Single HBA Configuration Cables

Cable Name: 1 Meter External Mini-SAS HD to External Mini-SAS HD Cable
Part #: CBL-SAST-0573
Ports: Single
Placement: External Cable
Description: External cascading cable, connects ports between servers and JBODs.

Figure 3-13: Mini-SAS HD Internal to External Adapter

Cable Name: 16-port Mini-SAS HD Internal to External Cable Adapter with LP Bracket
Part #: AOM-SAS3-16I16E-LP
Ports: Four wide-ports (sixteen ports total)
Placement: Internal cable with adapter
Description: Internal cable, connects the SAS3 backplane to external ports.
Connecting Multiple Backplanes in a Dual Channel Environment

This section describes the cables used when cascading from dual HBAs. These connections use CBL-SAST-0531 internal cables and CBL-SAST-0573 external cables.

Figure 3-14: Dual HBA Configuration

IMPORTANT: See Section 3-3 of this manual, *Failover with RAID Cards and Multiple HBAs* for important information on supported configurations.
