The information in this User’s Manual has been carefully reviewed and is believed to be accurate. The vendor assumes no responsibility for any inaccuracies that may be contained in this document, and makes no commitment to update or to keep current the information in this manual, or to notify any person or organization of the updates. Please Note: For the most up-to-date version of this manual, please see our website at www.supermicro.com.

Super Micro Computer, Inc. (“Supermicro”) reserves the right to make changes to the product described in this manual at any time and without notice. This product, including software and documentation, is the property of Supermicro and/or its licensors, and is supplied only under a license. Any use or reproduction of this product is not allowed, except as expressly permitted by the terms of said license.

IN NO EVENT WILL Super Micro Computer, Inc. BE LIABLE FOR DIRECT, INDIRECT, SPECIAL, INCIDENTAL, SPECULATIVE OR CONSEQUENTIAL DAMAGES ARISING FROM THE USE OR INABILITY TO USE THIS PRODUCT OR DOCUMENTATION, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. IN PARTICULAR, SUPER MICRO COMPUTER, INC. SHALL NOT HAVE LIABILITY FOR ANY HARDWARE, SOFTWARE, OR DATA STORED OR USED WITH THE PRODUCT, INCLUDING THE COSTS OF REPAIRING, REPLACING, INTEGRATING, INSTALLING OR RECOVERING SUCH HARDWARE, SOFTWARE, OR DATA.

Any disputes arising between manufacturer and customer shall be governed by the laws of Santa Clara County in the State of California, USA. The State of California, County of Santa Clara shall be the exclusive venue for the resolution of any such disputes. Supermicro's total liability for all claims will not exceed the price paid for the hardware product.

FCC Statement: This equipment has been tested and found to comply with the limits for a Class B digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the manufacturer’s instruction manual, may cause harmful interference with radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case you will be required to correct the interference at your own expense.

California Best Management Practices Regulations for Perchlorate Materials: This Perchlorate warning applies only to products containing CR (Manganese Dioxide) Lithium coin cells. “Perchlorate Material-special handling may apply. See www.dtsc.ca.gov/hazardouswaste/perchlorate”.

WARNING: This product can expose you to chemicals including lead, known to the State of California to cause cancer and birth defects or other reproductive harm. For more information, go to www.P65Warnings.ca.gov.

Preface

About this Manual
This manual is written for professional system integrators, Information Technology professionals, service personnel and technicians. It provides information for the installation and use of Supermicro's 6U SuperBlade system. Installation and maintenance should be performed by experienced professionals only.

Manual Organization

Chapter 1: Introduction
The first chapter provides a checklist of the main components included with the blade system and describes the main features of the mainboard and enclosure. A quick start procedure is also provided for your use.

Chapter 2: System Safety
You should familiarize yourself with this chapter for a general overview of safety precautions that should be followed when installing and servicing the 6U SuperBlade.

Chapter 3: Setup and Installation
Refer here for details on installing the 6U SuperBlade system into a rack.

Chapter 4: System Modules
This chapter covers modules in the 6U SuperBlade system, as well as the CMM module.

Chapter 5: Power Supply Modules
This chapter covers the system power supplies and their installation.

Appendix A: System Specifications
This appendix provides a summary of system specifications.
Table of Contents

Chapter 1 Introduction ......................................................... 1-1
  1-1 Overview ........................................................................... 1-1

Chapter 1
Introduction

1-1 Overview

The 6U SuperBlade is a compact self-contained server that connects to a pre-cabled enclosure that provides power, cooling, management and networking functions. One enclosure can hold up to either ten or twenty blade servers, depending upon the blade enclosure. This new generation of the 6U SuperBlade enclosure is designed to deliver a much higher system density, and to incorporate many latest technologies to satisfy the increasing demands of modern technology and higher computing power.

In this manual, “blade system” refers to the entire system (including the enclosure and blades servers), “blade” or “blade server” refers to a single blade module and “blade enclosure” is the unit that the blades, power supplies and modules are housed in.

Each blade server is optimized to fit into either a specific ten-blade or twenty-blade enclosure.

Please refer to our web site for information on operating systems that have been certified for use with the 6U SuperBlade at: www.supermicro.com/products/superblade/.

1-2 Quick Start Setup

This section covers how to quickly get your new 6U SuperBlade system up and running. Follow the procedure below to quickly setup your 6U SuperBlade system.

1. Unpack the components of your 6U SuperBlade system and check the packing list for damaged or missing components.
2. Select a setup location for your system. See "Choosing a Setup Location" on page 3-1 for details.
3. Mount the 6U SuperBlade chassis into your server rack. See "Installing the System Into a Rack" on page 3-3 for details.
4. Install the power supply modules into the rear of the 6U SuperBlade chassis. See "Installing a Power Supply" on page 5-4 for details.
5. Install the CMM module and any switch modules into the rear of the 6U SuperBlade chassis.
   a. For the CMM module, see "CMM Module Installation" on page 4-5 for details.
   b. For the Ethernet modules, see the 6U SuperBlade Network Modules User’s Manual for details.
   c. Attach keyboard, mouse and video connections to your CMM module.
   d. Attach network connections for your Ethernet modules. See the 6U SuperBlade Network Modules User’s Manual for details.
6. Setup your blade modules for use by doing the following:
   a. Open the module case lids of each blade module. Refer to the blade module user's manual for details.
   b. Install memory into each module. Refer to the blade module user’s manual for details.
   c. Emplace the Air Shroud when you have installed your memory for each blade module. Refer to the blade module user’s manual for details.
   d. Install the hard disk drives into each module. Refer to the blade module user’s manual for details.
   e. Install your blade modules into your 6U SuperBlade chassis. Refer to the blade module user’s manual for details.

7. Connect the power cords for your 6U SuperBlade system’s power supply and plug them into your power source ONLY after you have installed and secured all system components.

8. Power up your 6U SuperBlade system. Check to be sure all components are operating right and are not showing any fault LEDs or alarms in their operation.

9. Install your selected operating system for each blade module. Refer to the blade module user’s manual for details.

10. Download a BIOS update for each of your blade modules from the Supermicro website.

1-3 Software Mode Selection

Using the Web-based Management Utility, you can specify your 6U SuperBlade system to use a quiet mode for quieter operation and lower fan speed. See Section 4-1: Chassis Management Module on page 4-3 for further details.
1-4 Product Checklist of Typical Components

- Blade Enclosure (x1): 614E (6U, 14 full height 1-socket or 2-socket blades) or 610J (6U, 10 full height 1-socket or 2-socket blades)
- Blade Unit (minimum of 2, 14 maximum); see the Supermicro website (http://www.supermicro.com/products/superblade/) for a complete list of blades that can be mounted in your system. Some examples are listed below:
  - Single socket Modular Design (SP) – SBI-6419P-C3N, SBI-6119P-C3N
  - Dual socket – SBI-6429P-C3N, SBI-6129P-C3N
- Power Supplies (up to 8): PWS-2K21A-BR; see the Supermicro website (https://www.supermicro.com/products/SuperBlade/powersupply/) for details of power supplies available
- CMM Module (x1): MBM-CMM-FIO or MBM-CMM-001; see the Supermicro website (https://www.supermicro.com/products/SuperBlade/management/) for details of the management modules available

Optional components include:
- Ethernet Switches: SBM-25G-100 (Marvell 25-Gbps), MBM-XEM-001 (Broadcom 10-Gbps), MBM-XEM-002 (Intel 10-Gbps), MBM-GEM-001 (Intel 1-Gbps), MBM-GEM-004 (Broadcom 1-Gbps)

Additional modules will periodically become available. Please refer to http://www.supermicro.com/products/superblade for the most current list of modules available for the 6U SuperBlades.

Blade systems install into standard racks. Up to seven 6U blades systems may be installed into a 19" industry standard 42U rack.
For some details on the combinations and types of networking modules available, see Table 1-1 below. See the SuperBlade Network Modules User Manual for full details on available modules for the SuperBlade system.

Chapter 1: Introduction

1-5 Blade Enclosure Features

The 6U Supermicro’s blade enclosure is designed to house up to 14 blade units. Each accommodates up to eight power supplies. The enclosure mid-plane allows the blade units to share power, cooling and networking. Table 1-2 below describes the various enclosures, their components and modules. Table 1-3 shows the number of each module that may be installed in the various enclosure models.

Please check the Supermicro website for the latest module and enclosure installation information at http://www.supermicro.com/servers/blade/networking/matrix.cfm for further details.

</table>
The following sections provide a general outline of the main features for all blade server enclosures.

**Power**

The typical blade enclosure features a 2200W power system composed of up to two, four, six, or eight power supply modules, depending upon model selected. An alternate configuration (and required for a full 14-blade system) features a full total of four or eight power supply modules for redundancy. This power redundancy feature allows you to replace the failing power module while the backup module takes over to keep the system running. You must have either two, four, six or eight power supply modules installed in the blade enclosure.

The Chassis Management Module assumes the worst case (maximum) power for any model of blade prior to applying power. If the power supplies cannot supply that amount of the required power for the given load on the power supplies, then the CMM will not allow that unit to power up. After a blade is powered up, the blade’s BIOS calculates the actual power load required by the blade based upon the installed devices and informs the CMM of its requirements. The CMM then adjusts the remaining supply of power for additional blades based upon the actual delta of the total power, minus the amount of power being used by the blades that are powered on.

**Middle Plane**

The middle plane connects the various capabilities of the blades, such as the various speed switch(es) to Network Interface Controller(s), the Chassis Management Module (CMM) to the USB devices to the Host Channel Adapters. These devices all connect to the middle plane through high density connectors that provide both signals and power. This type of configuration reduces the amount of system cabling and simplifies the task of setting up the system. It provides an alternative signals route to support redundant power, CMM, network and IPMI functions.

**NOTE:** Signaling information can NOT be physically routed from one blade to another.

Chapter 1: Introduction

**LEDs**

Two LEDs are located at the right top of the enclosure above the last or right most blade. The left LED provides Power Status information and the right LED is the Fault LED.

**Enclosure Cooling**

The cooling for the entire blade system is provided by the fans in the power supply modules or optional fans that can be installed in place of a power supply. If a power supply fails, its fans will continue to operate to provide continuous cooling. For this reason, a failed power supply should remain installed in the enclosure until a replacement unit is ready.

**NOTE:** Fans are controlled by Auto Mode or User Mode (User Mode from level 1 to 10).

**WARNING:** The fans are very noisy at full speed and it is recommended that they not be run at full speed when in use in an office or near populated workstations.

For both enclosures, additional cooling fan modules, each with two cooling fans, can be added in place of power supplies in the rear of the enclosure.

**NOTE:** In order to prevent air flow leaks that would reduce cooling efficiency in the blade system’s enclosure, install dummy blades to close off any blade slots that do not have active blade modules installed in them.

For overheat problems, check that there are no obstructions (such as poorly routed cables), check that all fans are operating normally and make sure the ambient room temperature is not too warm (refer to Section A-2: Environmental Specifications on page A-2 for the maximum operating temperature). You can also use either of the blade management software utilities to increase the fan speed and maximize system cooling.

In the event of a power overload, you will have to add additional power supply modules to take up the load. Otherwise, you will not be able to power up all the blade modules. The blade BIOS plus CMM firmware calculates the load to determine if the power supplies can adequately handle the total system configuration.

**1-6 Power Supply Features**

The 6U SuperBlade enclosure comes standard with one CMM module and up to eight power supplies, depending on model selected. Information on the power supplies is summarized below. See Section 4-1: Chassis Management Module on page 4-3 for details on the CMM module and Chapter 5 for details on the power supplies.

If you install only half the total power supplies in the enclosure, they should be installed in the lower rather than the upper power bays. The reason for this counter-intuitive installation is that the power supplies in the lower bays provide increased airflow across the memory modules within each blade module. See the tables below for details on the power supplies for the different models of enclosures.

NOTE 1: Power supplies are numbered A1 through A4 for the top row, from left to right (facing the rear of the enclosure), and B1 through B4 for the bottom row.
NOTE 2: PSU = Indicates that a Power Supply Unit is installed at this location.
NOTE 3: BPP = Indicates that a Battery Backup Power supply is installed at this location.

**Power Supply Modules**

Each power supply module has its own power cord. Eight modules are required when the full complement of blade units are installed into an enclosure. An LED on the back of a power supply will be red when AC power is present and green when the power is on.

Supermicro's high-efficiency blade system power supplies deliver continuous redundant power up to 96% peak efficiency. Each power supply module includes a management module that monitors the power supplies and the power enclosure.

See Chapter 5 for specifications and details on the power supplies available for the SuperBlade system.

**Power Cord**

Each power supply module has a C-14 type socket (IEC-60320-C14) for AC power and the power cord must have a C-13 type connector (IEC-60320-C13) to connect to the power supply.

A plastic locking clip partially covering the socket was designed to prevent the power supply module from being removed with the power cord still connected.

Refer to Appendix A for power/amperage calculation tables. Refer to the supermicro web site for further details on power cords.

**Power Supply Failure**

If a power supply or a fan in a power supply fails, the system management software will notify you of the situation. In either case, you will need to replace the power supply module with another identical one. Please note that if a power supply fails, its fans will continue to operate to provide system cooling. For this reason, a failed power supply should remain installed in the enclosure until a replacement unit is ready.

See Chapter 5 for the procedure on replacing power supplies.

**1-7 Special Design Features**

Supermicro's 6U SuperBlade offers special design features, some of which no other blade server can duplicate. These features give you extraordinary flexibility in configuring a blade system for your own particular needs.

**Operating System Support**

Please check with the SMC web page for certified OS at: https://www.supermicro.com/support/resources/OS/OS_Certification_Intel.cfm.
Remote Management

The Chassis Management Module (CMM) can manage the whole enclosure and any individual blade module by switching around to it.

NOTE: Some Blade modules already have onboard BMC.

Computing Density/Power

Single and dual core processors are supported in the blade module systems. Each 6U SuperBlade mainboard supports one or two processors and up to 1.5 TB of main memory. This translates to a maximum potential of up to 28 processors and 21 TB of memory per 14-blade enclosure, or 196 processors and 147 TB of memory for a 42U rack of seven 6U enclosures.

High-Efficiency Power Supplies

A reliable source of power is critical in server systems and even more so in a blade system, where up to fourteen systems (blades) share the same power source. 6U SuperBlade power supplies have been designed to operate at up to 96% peak efficiency and provide redundancy. Using high-efficiency power supplies results in a measurable reduction in wasted energy consumption and generated heat.

1-8 Returning Merchandise for Service

A receipt or copy of your invoice marked with the date of purchase is required before any warranty service will be rendered. You can obtain service by calling your vendor for a Returned Merchandise Authorization (RMA) number. When returning to the manufacturer, the RMA number should be prominently displayed on the outside of the shipping carton, and mailed prepaid or hand-carried. Shipping and handling charges will be applied for all orders that must be mailed when service is complete.

This warranty only covers normal consumer use and does not cover damages incurred in shipping or from failure due to the alteration, misuse, abuse or improper maintenance of products.

During the warranty period, contact your distributor first for any product problems.

For faster service, RMA authorizations may be requested online at:

http://www.supermicro.com/support/rma/

Chapter 2
Standardized Warning Statements

2-1 About Standardized Warning Statements
The following statements are industry standard warnings, provided to warn the user of situations which have the potential for bodily injury. Should you have questions or experience difficulty, contact Supermicro’s Technical Support department for assistance. Only certified technicians should attempt to install or configure components.
Read this appendix in its entirety before installing or configuring components in the Supermicro chassis.
These warnings may also be found on our web site at http://www.supermicro.com/about/policies/safety_information.cfm.

Warning Definition

Warning!
This warning symbol means danger. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents.

警告の定義
この警告サインは危険を意味します。人事故につながる可能性がありますので、いずれの機器でも動作させる前に、電気回路に含まれる危険性に注意して、標準的な事故防止策を精通して下さい。

警告の定義
您正处于可能受到严重伤害的工作环境中，在您使用设备开始工作之前，必须充分意识到触电的危险，并熟悉掌握防止事故发生的标准工作程序。请根据每项警告结尾的声明号码找到此设备的安全性警告说明的翻译文本。

INSTRUCCIONES IMPORTANTES DE SEGURIDAD

Este símbolo de aviso indica peligro. Existe riesgo para su integridad física. Antes de manipular cualquier equipo, considere los riesgos de la corriente eléctrica y familiarícese con los procedimientos estándar de prevención de accidentes. Al final de cada advertencia encontrará el número que le ayudará a encontrar el texto traducido en el apartado de traducciones que acompaña a este dispositivo.

GUARDE ESTAS INSTRUCCIONES.

IMPORTANTES INFORMATIONS DE SÉCURITÉ

Ce symbole d'avertissement indique un danger. Vous vous trouvez dans une situation pouvant entraîner des blessures ou des dommages corporels. Avant de travailler sur un équipement, soyez conscient des dangers liés aux circuits électriques et familiarisez-vous avec les procédures couramment utilisées pour éviter les accidents. Pour prendre connaissance des traductions des avertissements figurant dans les consignes de sécurité traduites qui accompagnent cet appareil, référez-vous au numéro de l'instruction situé à la fin de chaque avertissement.

CONSERVEZ CES INFORMATIONS.
BELANGRIJKE VEILIGHEIDSINSTRUCTIES

Dit waarschuwings symbool betekent gevaar. U verkeert in een situatie die lichamelijk letsel kan veroorzaken. Voordat u aan enige apparatuur gaat werken, dient u zich bewust te zijn van de bij een elektrische installatie betrokken risico's en dient u op de hoogte te zijn van de standaard procedures om ongelukken te voorkomen. Gebruik de nummers aan het eind van elke waarschuwing om deze te herleiden naar de desbetreffende locatie.

BEWAAR DEZE INSTRUCTIES

**Installation Instructions**

**Warning!**

Read the installation instructions before connecting the system to the power source.

設定手順書

システムを電源に接続する前に、設定手順書をお読み下さい。

警告

将此系统连接电源前，请先阅读安装说明。

警告

将系统与电源连接前，请先阅读安装说明。

**Warnung**

Vor dem Anschließen des Systems an die Stromquelle die Installationsanweisungen lesen.

¡Advertencia!

Lea las instrucciones de instalación antes de conectar el sistema a la red de alimentación.

**Attention**

Avant de brancher le système sur la source d'alimentation, consulter les directives d'installation.

Circuit Breaker

Warning!

This product relies on the building’s installation for short-circuit (overcurrent) protection. Ensure that the protective device is rated not greater than: 250 V, 20 A.

Waarschuwing

Raadpleeg de installatie-instructies voordat u het systeem op de voedingsbron aansluit.

Circuit Breaker

Warning!

This product relies on the building’s installation for short-circuit (overcurrent) protection. Ensure that the protective device is rated not greater than: 250 V, 20 A.

Circuit Breaker

Warning!

This product relies on the building’s installation for short-circuit (overcurrent) protection. Ensure that the protective device is rated not greater than: 250 V, 20 A.

Circuit Breaker

Warning!

This product relies on the building’s installation for short-circuit (overcurrent) protection. Ensure that the protective device is rated not greater than: 250 V, 20 A.

Circuit Breaker

Warning!

This product relies on the building’s installation for short-circuit (overcurrent) protection. Ensure that the protective device is rated not greater than: 250 V, 20 A.

Circuit Breaker

Warning!

This product relies on the building’s installation for short-circuit (overcurrent) protection. Ensure that the protective device is rated not greater than: 250 V, 20 A.
Warning!

The system must be disconnected from all sources of power and the power cord removed from the power supply module(s) before accessing the chassis interior to install or remove system components.

Waarschuwing

Dit product is afhankelijk van de kortsluitbeveiliging (overspanning) van uw electrische installatie. Controleer of het beveiligde apparaat niet groter gedimensioneerd is dan 220V, 20A.

Power Disconnection Warning

Warning!

The system must be disconnected from all sources of power and the power cord removed from the power supply module(s) before accessing the chassis interior to install or remove system components.

Warning

In you open the chassis and install or remove internal components, you must disconnect the system from all power sources and remove the power cord from the power supply module(s).
¡Advertencia!
El sistema debe ser disconnected de todas las fuentes de energía y del cable eléctrico quitado de los módulos de fuente de alimentación antes de tener acceso el interior del chasis para instalar o para quitar componentes de sistema.

Attention
Le système doit être débranché de toutes les sources de puissance ainsi que de son cordon d'alimentation secteur avant d'accéder à l'intérieur du chassis pour installer ou enlever des composants de système.

警告
只有经过受訓且具資格人員才可安裝、更換與維修此設備。

¡Advertencia!
El sistema debe ser disconnected de todas las fuentes de energía y del cable eléctrico quitado de los módulos de fuente de alimentación antes de tener acceso el interior del chasis para instalar o para quitar componentes de sistema.

Warning!
Only trained and qualified personnel should be allowed to install, replace, or service this equipment.

Equipment Installation

¡Advertencia!
El sistema debe ser disconnected de todas las fuentes de energía y del cable eléctrico quitado de los módulos de fuente de alimentación antes de tener acceso el interior del chasis para instalar o para quitar componentes de sistema.

Warning!
Only trained and qualified personnel should be allowed to install, replace, or service this equipment.
Warnung
Das Installieren, Ersetzen oder Bedienen dieser Ausrüstung sollte nur geschultem, qualifiziertem Personal gestattet werden.

¡Advertencia!
Solamente el personal calificado debe instalar, reemplazar o utilizar este equipo.

Attention
Il est vivement recommandé de confier l'installation, le remplacement et la maintenance de ces équipements à des personnels qualifiés et expérimentés.

警告
此部件应安装在限制进出的场所，限制进出的场所指只能通过使用特殊工具、锁和钥匙或其它安全设施进入的场所。
Warnung
Diesen Einheit ist zur Installation in Bereichen mit beschränktem Zutritt vorgesehen. Der Zutritt zu derartigen Bereichen ist nur mit einem Spezialwerkzeug, Schloss und Schlüssel oder einer sonstigen Sicherheitsvorkehrung möglich.

¡Advertencia!
Esta unidad ha sido diseñada para instalación en áreas de acceso restringido. Sólo puede obtenerse acceso a una de estas áreas mediante la utilización de una herramienta especial, cerradura con llave u otro medio de seguridad.

Attention
Cet appareil doit être installée dans des zones d'accès réservées. L'accès à une zone d'accès réservé n'est possible qu'en utilisant un outil spécial, un mécanisme de verrouillage et une clé, ou tout autre moyen de sécurité.

警告

¡Advertencia!
Esta unidad ha sido diseñada para instalación en áreas de acceso restringido. Sólo puede obtenerse acceso a una de estas áreas mediante la utilización de una herramienta especial, cerradura con llave u otro medio de seguridad.

Warning
This device is intended for installation in areas with restricted access. Access to such areas is only possible using special tools, lock and key, or other security measures.

Waarschuwing
Dit apparaat is bedoeld voor installatie in gebieden met een beperkte toegang. Toegang tot dergelijke gebieden kunnen alleen verkregen worden door gebruik te maken van speciaal gereedschap, slot en sleutel of andere veiligheidsmaatregelen.
**Battery Handling**

**Warning!**

There is the danger of explosion if the battery is replaced incorrectly. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

警告

电池更换不当会有爆炸危险。请只使用同类电池或制造商推荐的功能相当的电池更换原有电池。请按制造商的说明处理废旧电池。

Warnung

Attention

Danger d'explosion si la pile n'est pas remplacée correctement. Ne la remplacer que par une pile de type semblable ou équivalent, recommandée par le fabricant. Jeter les piles usagées conformément aux instructions du fabricant.

¡Advertencia!

Existe peligro de explosión si la batería se reemplaza de manera incorrecta. Reemplazar la batería exclusivamente con el mismo tipo o el equivalente recomendado por el fabricante. Desechar las baterías gastadas según las instrucciones del fabricante.

**Warning!**

There is the danger of explosion if the battery is replaced incorrectly. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.
Redundant Power Supplies

Warning!

This unit might have more than one power supply connection. All connections must be removed to de-energize the unit.
Warning!
Hazardous voltage or energy is present on the backplane when the system is operating. Use caution when servicing.

Backplane Voltage

Waarschuwing
Deze eenheid kan meer dan één stroomtoevoeraansluiting bevatten. Alle aansluitingen dienen verwijderd te worden om het apparaat stroomloos te maken.
Waarschuwing

Een gevaarlijke spanning of energie is aanwezig op de backplane wanneer het systeem in gebruik is. Voorzichtigheid is geboden tijdens het onderhoud.

Comply with Local and National Electrical Codes

Warning!

Installation of the equipment must comply with local and national electrical codes.

Warning

Die Installation der Geräte muss den Sicherheitsstandards entsprechen.

¡Advertencia!

La instalacion del equipo debe cumplir con las normas de electricidad locales y nacionales.

Attention

L'équipement doit être installé conformément aux normes électriques nationales et locales.

mittere takım heshmel waqiri

اذاً!

الحالة الجزءة يبقى فيه طائرات للحوما ديم حعمالا ديم هتشمل المكاليم الوارقة.

تركيب المعدات الكهربائية يجب أن يمثل للقوانين المحلية والوطنية المتعلقة بالكهرباء.
Product Disposal

Warning!
Ultimate disposal of this product should be handled according to all national laws and regulations.
Hot Swap Fan Warning

Warning!
The fans might still be turning when you remove the fan assembly from the chassis. Keep fingers, screwdrivers, and other objects away from the openings in the fan assembly's housing.
Waarschuwing

Het is mogelijk dat de ventilator nog draait tijdens het verwijderen van het ventilatorsamenstel uit het chassis. Houd uw vingers, schroevendraaiers en eventuele andere voorwerpen uit de buurt van de openingen in de ventilatorbehuizing.

Power Cable and AC Adapter

Warning!

When installing the product, use the provided or designated connection cables, power cables and AC adaptors. Using any other cables and adaptors could cause a malfunction or a fire. Electrical Appliance and Material Safety Law prohibits the use of UL or CSA-certified cables (that have UL/CSA shown on the code) for any other electrical devices than products designated by Supermicro only.

警告

安装此产品时，请使用本身提供的或指定的连接线, 电源线和电源适配器。使用其它线材或适配器可能会引起故障或火灾。除了 Supermicro 所指定的产品，电气用品和材料安全法律規定禁止使用未经 UL 或 CSA 认证的线材。（线材上会显示 UL/CSA 符号）。
Waarschuwing

Bij het installeren van het product, gebruik de meegeleverde of aangewezen kabels, stroomkabels en adapters. Het gebruik van andere kabels en adapters kan leiden tot een storing of een brand. Elektrisch apparaat en veiligheidsinformatiebladen wet verbiedt het gebruik van UL of CSA gecertificeerde kabels die UL of CSA die op de code voor andere elektrische apparaten dan de producten die door Supermicro alleen.
Chapter 3
Setup and Installation

3-1 Overview

This chapter provides a quick setup procedure for your 6U SuperBlade. Following these steps in the order given should enable you to have the system operational within a minimum amount of time. This quick setup assumes that the processor(s) and memory have already been installed. If not, please turn to Chapter 4 for details on installing specific components.

3-2 Unpacking the System

You should inspect the box the 6U SuperBlade was shipped in and note if it was damaged in any way. If the server itself shows damage you should file a damage claim with the carrier who delivered it.

Decide on a suitable location for the rack unit that will hold the 6U SuperBlade. It should be situated in a clean, dust-free area that is well ventilated. Avoid areas where heat, electrical noise and electromagnetic fields are generated. You will also need it placed near a grounded power outlet. Read the "Rack Precautions" and "Server Precautions" in the next section.

The box the 6U SuperBlade was shipped in should include two sets of rail assemblies, two handles and the mounting screws you will need to install the system into the rack. Follow the steps in the order given to complete the installation process in a minimum amount of time. Please read this section in its entirety before you begin the installation procedure outlined in the sections that follow.

Choosing a Setup Location

The following are important considerations for choosing a setup location:

- Leave enough clearance in front of the rack to enable you to remove the blade units (~25 inches).
- Leave approximately 30 inches of clearance behind or to the rear of the rack to allow for sufficient airflow and ease in servicing, as well as clearance for electrical power connections.
- This product is intended for installation only in a Restricted Access Location (dedicated equipment rooms, service closets and the like). This is because the 6U SuperBlade enclosure does not provide any physical security measures.
- This product is not suitable for use with visual display work place devices according to §2 of the German Ordinance for Work with Visual Display Units.

WARNING: Please read the following important Warnings and Precautions!
Rack Precautions

The following are important precautions concerning rack setup:

- The enclosure unit is heavy and requires at least two people to lift it.
- Ensure that the leveling jacks on the bottom of the rack are fully extended to the floor with the full weight of the rack resting on them.
- In single rack installation, stabilizers should be attached to the rack.
- In multiple rack installations the racks frames should be grounded to the same earth ground as the electrical source for the power supplies by means of a grounding strap.

Server Precautions

The following are important precautions concerning server setup:

- Review the electrical and general safety precautions in Chapter 2.
- Determine the placement of each component in the rack before you install the rails.
- Install the heaviest server components on the bottom of the rack first, and then work up.
- Use a regulating uninterrupted power supply (UPS) to protect the server from power surges, voltage spikes and to keep your system operating in case of a power failure.
- Allow the hot plug hard drives and power supply units to cool before touching them.
- Always keep the rack’s front door and all panels and components on the servers closed when not servicing to maintain proper cooling.

Rack Mounting Considerations

Below are listed important considerations for rack mounting.

Ambient Operating Temperature

If installed in a closed or multi-unit rack assembly, the ambient operating temperature of the rack environment may be greater than the ambient temperature of the room. Therefore, consideration should be given to installing the equipment in an environment compatible with the manufacturer’s maximum rated ambient temperature. Refer to Appendix E for operating temperature specifications.

Reduced Airflow

Equipment should be mounted into a rack so that the amount of airflow required for safe operation is not compromised.

Mechanical Loading

Equipment should be mounted into a rack so that a hazardous condition does not arise due to uneven mechanical loading.
Circuit Overloading

Consideration should be given to the connection of the equipment to the power supply circuitry and the effect that any possible overloading of circuits might have on over-current protection and power supply wiring. Appropriate consideration of equipment nameplate ratings should be used when addressing this concern. See the power calculation tables in Appendix A.

Reliable Ground

A reliable ground must be maintained at all times. To ensure this, the rack itself should be grounded. Particular attention should be given to power supply connections other than the direct connections to the branch circuit (such as the use of power strips and so on).

NOTE: It is recommended that you seek the advice and assistance of a licensed electrician that can advise you on best practices for ensuring that the electrical supply and the rack are joined to a Common Bonding Network.

Professional documents on grounding techniques include:
- ANSI/TIA-942 – Telecommunications Infrastructure Standard for Data Centers
- J-STD-607-A-2002 – Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications

Installing the System Into a Rack

This section provides information on installing the 6U SuperBlade into a rack. There are a variety of rack units on the market, meaning the procedure may differ slightly. Refer to the Enclosure Template that was included with the system for help.

Rack Mounting Hardware

The following is a list of rack mounting hardware you will need for rack setup and installation:
- Two rail assemblies (one for each side of the enclosure)
- Two handles
- Four roundhead screws for fastening the enclosure ears to the rack
- Eight flathead screws and washers for mounting the rails to the rack
Installation

Use the procedure below for installing an enclosure in a rack.

**Installing an enclosure:**

1. Decide where you want to place the blade enclosure into the rack (see “Rack Mounting Considerations” in the previous section).

2. Position the Enclosure Template at the front of the enclosure to determine the locations of the screws for the enclosure rails (see Figure 3-1).

![Figure 3-1. Positioning the Enclosure Template](image)

3. The two enclosure rail sections are screwed together to keep them immobile during shipping. Release these screws just enough to allow the rails to slide apart. Note the arrow on the rail, which indicates the end that attaches to the front of the rack.

4. Slide the rails apart far enough to match the depth of the rack. Position the rails with the template and secure the front of each to the front of the rack with two flathead screws, then secure the back of each rail to the rear of the rack with two flathead screws (see Figure 3-2). Note that the rails are left/right specific and very heavy.

![Figure 3-2. Securing the Rails to the Rack](image)

5. (Optional step) Add the front left and right handles to the enclosure using five screws to secure each handle. Install a thumbscrew through the bottom hole of each handle (see Figure 3-3).
Chapter 3: Setup and Installation

NOTE: These handles are optional and need only be installed when mounting the system into a short rack. When mounting into a deep rack, they are unnecessary and regular screws should be used instead of thumbscrews.

Be aware that these handles are not to be used for lifting the system, they are only to be used to slide the system within the rack.

6. With one person on either side (see the descriptive label on the side of the enclosure), lift the enclosure and slide it into the installed rails.

WARNING: Be sure that the enclosure is empty of all blades, power supplies, switches and management modules **BEFORE** lifting. These should be installed **AFTER** the enclosure is mounted in the rack. Injury and damage may occur if components are not removed from the rack prior to installation.

7. After pushing the enclosure all the way into the rack, use two roundhead screws on each side of the server to lock it into place.

**Figure 3-3. Attaching the Optional Handles**

---

8. The enclosure is now securely installed in the rack (see **Figure 3-4**).

**Figure 3-4. Enclosure Installed into Rack**
Chapter 4
System Modules

In addition to the blade units, your blade system comes equipped with one or more system modules. The modules fit into the rear of the enclosure into bays above and/or below the power supplies. This chapter describes the various blade modules that may be part of your blade system. Module configurations can be customized; you can install two of the same type module for redundancy purposes or you may omit a module altogether (except for the CMM, which is a required module). Figure 4-1 and Figure 4-2, along with Table 4-1 and Table 4-2, show typical module configuration in the 6U blade systems. See Chapter 5 for information on power supply modules.

**WARNING:** All module bays must be populated either with a module or a dummy module cover to maintain proper airflow.

</tbody>
</table>
4-1 Chassis Management Module

The Chassis Management Module (CMM) (Figure 4-3) is a required module in a blade system. This “command” module communicates with the blade units, the power supplies and the blade switches. Used in conjunction with the Web Interface or IPMI View management software, the CMM provides administrator control over individual blade units, power supplies, cooling fans and networking switches and monitors onboard temperatures, power status, voltage levels and fan speeds. The standard CMM module for the 6U SuperBlade system is the MBM-CMM-FIO or MBM-CMM-001.

NOTE: Using the MBM-CMM-FIO in the enclosure allows the use of the two front mounted RJ45 ports on the enclosure, however using the MBM-CMM-001 does not allow these ports to function.

The CMM provides a dedicated, remote KVM (keyboard/video/mouse) connection over an out of band TCP/IP Ethernet network during any server state (functioning, blue-screen, powered down, BIOS and so on). It also supports Virtual Media (VM) redirection for CD, floppy and USB mass storage devices and configures such information as the switch IP addresses. A summary of CMM features is shown in Table 4-4.

Chapter 4: System Modules

Module Redundancy

A blade system must have one CMM and may have two for redundancy is offered only on a specific enclosure model, which has the hardware capability to incorporate two CMM's on one backplane. Since the CMM uses its own processor, all monitoring and control functions are carried out regardless of the operation or power status of the blade units. CMM modules can only be installed in the upper and/or lower right module bays.

Determining Master/Slave Modules Status

When a blade system has two CMM modules, they are assigned a master/slave status. This is done automatically with the default primary CMM specified for each enclosure, while there will be no redundant in certain enclosures.

If the master CMM is powered down or removed (or is being reset by its user), the second (slave) CMM module will then immediately be assigned as the master. The redundant CMM mode is only offered on specific chassis models. The slave uses the previous master IP config in case of a fail over.

NOTE: The Slave CMM keeps the same log/status as the Master CMM and uses the previous master IP config.

CMM Module Installation

Use this procedure to install the MBM-CMM-FIO or MBM-CMM-001 CMM module to the 6U SuperBlade chassis. Make sure the cover to the module has been installed before proceeding. Follow the anti-static precautions described in Chapter 2.

Installing the Module:

1. Remove the dummy cover from the bay you want to place the module in.
2. Place the module’s release handle in the open position.
3. Slide the module into the module bay until it stops.

Table 4-6. MBM-CMM-001 Module Features

</tr>
</tbody>
</table>
4. Push the release handle to the closed position.

5. After the module has been installed and the handle locked, it will turn on and a POST test will run to verify it is working properly.

**Removing the Module:**
1. Pull out the release handle to the open position.
2. Pull the module out of the bay.
3. Replace immediately with another module or with a dummy module cover to maintain airflow integrity.

**Configuring the CMM**

To access/configure the CMM, you first have to configure the IP settings of the CMM depending on your network environment. The below procedure for this configuration just serves as a reference for getting the CMM setup. If your system has Linux OS, please follow similar instructions to get the CMM setup.

The CMM access topology is as follows:

**DHCP Access:**
1. Connect a network cable to the CMM module.
2. The system should boot into the default Fail Over mode. The DHCP mode will appear on the CLI mode screen.
3. If the system fail over and CLI is not active, it will proceed to the next default IP of CMM at https://192.168.100.100.
4. If the CMM cannot enter the default IP, then an RJ45/USB cable can be connected from the CMM's RJ45 Ethernet LAN Port to the Desktop Host using the USB Port in Serial Port mode with a speed set at 115200. The DHCP IP can be manually set at the same subnet-mask for gateway access at 192.168.100.01.

**Default IP Access:**
1. Connect network cable to the network port at CMM.
2. At system Prompt, https://192.168.100.100

Requirements are:
- Computer system with LAN (RJ45) port
- RJ -45 Ethernet cable

The default IP of the CMM is https://192.168.100.100. Configure the Computer system (connected through Ethernet-LAN to the CMM) to the same address range (for example https://192.168.100.101). The default mode is the Fail Over mode. If the DHCP fails, then the CMM will automatically default to the IP address of the CMM.
Configuring the CMM in Windows OS:

1. Go to START → CONTROL PANEL → NETWORK CONNECTIONS
2. Right-click on LAN to view properties.
3. Choose "Internet Protocol (TCP/IP)" under the GENERAL tab and click on PROPERTIES (see Figure 4-5).

4. Manually configure the IP address of the computer system to be in the same address range as the CMM (see Figure 4-6).

Example:

- IP address: https://192.168.100.101
- Subnet Mask: 255.255.255.0
- Default Gateway: 192.168.100.1

Figure 4-5. Choose Internal Protocol

Figure 4-6. Manually Configure the IP Address
5. Once the IP address for the computer system is configured, the CMM can be accessed through the web browser by entering the default IP address 192.168.100.100 of the CMM into the browser’s address bar.

6. Now, the IP address, subnet mask and default gateway of the CMM can be changed according to the network environment (see Figure 4-7). Please refer to the Web-based Management Utility User’s Manual for more information.

**Figure 4-7. Changing Settings**

**WARNING:** Don't change any other setting, unless you are familiar with it.

**NOTE:** The above screens are examples for purposes of demonstrating this procedure. The screens you actually view may or may not appear the same as those shown above.
Chapter 4: System Modules

CMM Functions
The following sections describe local functions and remote functions of the CMM. With only minor exceptions, all of the remote functions can be performed by one of three mechanisms: web-based access to the CMM module, access to the CMM using IPMIview, a client tool implemented in Java, or via IPMItool commands (DOS commands or shell scripted commands).

When the web based browser is used, the CMM acts as a web server, requiring a higher bandwidth connection to the CMM. If there are any bandwidth constraints, IPMI will provide a superior experience. Additionally, since graphical updates are provided by client-side Java, IPMIview can also be a superior user experience.

IPMItool on the other hand can provide the ability to issue similar/identical commands to many 6U SuperBlade enclosures/CMM’s to manage all of them in a similar way.

Remote KVM over IP
Remote KVM over IP is independent from local KVM. Remote KVM encrypts all communication between the remote user and the CMM.

To Use: Remote KVM over IP is initiated with the management software (IPMI View or Web-based utility). Attach the LAN cable to the LAN port on the CMM module then refer to "Web-based Management Utility" on page 4-12 to login and use either utility.

Remote Storage (Virtual Media)
The Remote Storage function allows the user to connect to a remote storage device (such as a floppy, hard disk, or USB storage device) and access the device as if it were local. This can be used not only to read and write to remote storage devices but to load an operating system from a remote drive.

Serial Over LAN (SOL)
Serial Over LAN allows you to redirect the input and output of a serial port via IPMI in order to manage blade modules from a remote location.

To Use: Serial Over LAN can be activated via the Web-based Management utility. See the Web-based Management Utility User’s Manual for the procedure to initiate SOL.

Monitoring Functions
Used in conjunction with IPMI or the Web-based Management utility, the CMM module can monitor and provide information on the hardware health of the blade modules and the system as a whole. In addition to the monitoring functions, you can remotely power on, power off or reboot a system.

Health information includes:
- Temperature levels
- Fan speeds
- Voltage levels
• Power status

**Power Consumption Management**

The CMM module’s firmware can also control all power on/off activity in the whole blade system. This is done by using the Power button, onboard BMC or from any other use of remote management software.

Once a blade module is installed in the enclosure the installed CMM immediately receives information on the rated Max Power Consumption value of the new blade module. The CMM then calculates whether there is enough power for this new blade module by comparing the Max Power Consumption value of the new blade module with the calculated Remaining Power value of the system.

If there is enough power, the CMM will power on the blade. However if there is not enough power in the blade system, then the new blade module is not powered on and the front panel LED on the enclosure will blink.

After the blade is powered on, the CMM then collects the actual power consumption of this individual blade and updates the calculated Remaining Power value for the system.

The CMM also reserves power for all the networking and chassis management modules installed on the system.

**WARNING:** One CMM module must be running to control the power systems and prevent overloading.
USB Ports and Reset Button

The USB Ports and Reset Button on the CMM are described below.

Figure 4-8. USB Ports on CMM

USB Ports

The USB ports on both CMM modules are shown in Figure 4-8. They are only used for debugging purposes and not for communication with your system.
Reset Button

The Reset button located on the front of the CMM module is used to reset the following software settings to their defaults:

To reset the CMM to factory defaults, press and hold the Reset button for five seconds.

Firmware

The firmware for the CMM switch resides in the module. This firmware can be updated with the web-based management utility.

Within the utility, go to the MAINTENANCE > UPDATE FIRMWARE screen in the Web-based Management Utility. Here you can enter the name of the firmware you want to update or click on BROWSE to select the firmware file. Finish by clicking the UPLOAD button.

NOTE: This process is not reversible once the firmware is updated, so proceed with caution. It might take a few minutes to complete this procedure.

Web-based Management Utility

System management may be performed with either of three software packages: IPMIview, SMCIPMItool or a Web-based Management Utility. Any of these utilities are designed to provide an administrator with a comprehensive set of functions and monitored data to keep tabs on the system and perform management activities.

The Web-based Management Utility is a web-based interface that consolidates and simplifies system management for Supermicro 6U SuperBlade systems. The Web-based Management Utility aggregates and displays data from the CMM module.

The Web-based Management Utility provides the following key management features:

- Enables IT administrators to view in-depth hardware configuration and status information using a single intuitive interface.
- Provides an OS-independent, remote graphical console.
- Allows remote users to map local media (floppy, removable disks and hard drives) or ISO images on a shared network drive to a blade server.

### Table 4-7. CMM Reset Settings

<table>
<thead>
<tr>
<th>Software Setting</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>User Name and Password</td>
<td>Reset to ADMIN and ADMIN (case sensitive)</td>
</tr>
<tr>
<td>IP Address</td>
<td>Reset to <a href="https://192.168.100.100">https://192.168.100.100</a></td>
</tr>
<tr>
<td>Gateway Address</td>
<td>Reset to 0.0.0.0</td>
</tr>
<tr>
<td>Subnet Mask</td>
<td>Reset to 255.255.255.0</td>
</tr>
</tbody>
</table>
**Supported Browsers**

The following browsers have been tested for use with the Web-based Management Utility. It is recommended that you use the most current revision of the browser you choose. The minimum browser revisions supported by the Web-based Management Utility are shown below:

- Internet Explorer 7
- Firefox 2.0.0.7
- Google Chrome

**Network Connection/Login**

To log into the Web-based Management Utility:

1. Launch a web browser.
2. In the address field of the browser, enter the IP address that you assigned to the system and hit the <ENTER> key.
3. When the browser makes contact with Supermicro’s Chassis Management Module, enter your username and password, then click LOGIN.
4. The Web-based Management Utility HOME PAGE will then display as shown in Figure 4-9.

**Address Defaults**

Table 4-8 shows the default addresses that are initially set for the CMM. Afterwards, you can change these values within the program (see the Web-based Management Utility User’s Manual for more details).

<table>
<thead>
<tr>
<th>Default</th>

<td>ADMIN</td>
</tr>
<tr>
<td>Default password</td>
<td>ADMIN</td>
</tr>
</tbody>
</table>

a. **Note:** The web address must be entered as https://192.168.100.100 in the web browser. Entering only http:// gives you instead an address error.
Figure 4-9 displays the WEB-BASED MANAGEMENT UTILITY HOME PAGE and its controls.

Figure 4-9. Home Page

NOTE: For more information on the Web-based Management Utility, and a description of its controls, see the Superblade Web-based Management Utility User’s Manual for more details.
Chapter 5

Power Supply Modules

The 6U SuperBlade enclosure comes standard with one CMM module (see the Chapter 4 for details on the CMM module) and either two or four power supplies. See Appendix A for summary specification details on the power supplies available to the 6U SuperBlade enclosure.

5-1 Power Supply Modules

The minimum amount of modules required to power the system depends upon the full complement of blade units installed into an enclosure and the type of switches installed in the enclosure. An LED on the back of a power supply will be amber when AC power is present and green when the power is on.

When installing only a few power supplies in the enclosure, they should be installed first in the lower rather than the upper power bays. This is to provide increased airflow across the memory modules within each blade module.

The 2200W power supply modules require a 200-240V AC input and a C13 socket, which requires a power cord with a C14 connector.

Supermicro’s high-efficiency blade system power supplies deliver continuous redundant power up to 94% peak efficiency. Each power supply module includes a management module that monitors the power supplies and the power enclosure.

The features of these power supplies are shown below.

Under typical conditions, the above is the estimated runtime for the BBP modules. The runtime can be extended by adding additional BBP modules to a system.

### Power Supply Failure

If a power supply or a fan in a power supply fails, the system management software will notify you of the situation. In either case, you will need to replace the power supply module with another identical one.

**NOTE:** Refer to www.supermicro/products/superblade for possible updates on part numbers.

#### Installing a Power Supply

1. Insert a replacement unit into the empty power bay with the handle to the left.

**WARNING:** This left/right orientation depends on the power supply’s top or bottom location. If you inadvertently put a power supply upside down in the lower slots, it can be VERY difficult to remove the power supply.

2. Push unit all the way in until it is firmly seated.
3. Push the handle back into the closed position until it clicks into the locked position.
4. Move the locking clip away from the socket and reconnect the power cord.

#### Removing a Power Supply

First, make sure the power supply has been shut down. You can remove power from a power unit via your system management software.

1. Remove the power cord from the power supply unit.
2. Release the locking clip to unlock the power supply module.

</table>
3. Pull out the handle and remove the unit: the two-piece handle locks into the closed position. To release the handle, squeeze together the two metal plates of the handle with your thumb and fingers and then pull out.

5-2 Redundant Power Supplies

Each blade enclosure can hold up to eight (SBE-614E) power supplies. Installing the maximum number of power supplies may provide you with redundant power – depending upon the number of blades in the enclosure, the model and power level of the power supplies installed and the power load from modules in your system. In most blade enclosure systems power supplies may be redundant and therefore provide backup in case of power supply failure. The configuration for power redundancy is created using the IPMIView application tool for the system.

For purposes of denoting the amount of redundancy, a server system has \( N \) main power supplies to support the whole system working, with a “+” number after the \( N \) denoting the number of redundant power supplies. Hence, if there is one power supply for redundancy in a system that has the feature of “redundant power”, the total of power supplies for that server system is denoted as \( N+1 \).

For example, suppose a system has four 2200 Watt Power Supply Units (PSU), for a total power supply of 8800 Watts. The maximum power usage of each blade is 375 Watts for a total power demand of 3750 Watts to run the whole system. So in this example there are effectively two redundant power supplies (\( N+1 \)) over what is needed to power the blades in the system.

In the IPMIView tool you can set the priority (default CPU power usage) of each blade first before any PSU fails (0%->shut down, 50%->throttling, 100%->Running). See Figure 5-3 below for an example.

Figure 5-3. Power Supply Status
Therefore the following redundancies apply to your system when, as an example, 2200W power supplies fail.

- If one PSU fails, then you have 6600 Watts available. The CMM will detect the remaining power left for the whole system. But because the total blade power usage is only 3750 Watts, every blade can still work properly.
- If 2 PSUs fail, then only 4400 Watts are left available to support the blade power usage. The system can still support all ten blades running in it.
- If 3 PSUs fail, then the remaining 2200 Watts available cannot support the whole system. Therefore the CMM will start to shut down or throttle down the load in order to keep blades running based upon the priority settings that were made for each blade using the IPMIView application until the load is enough to power the remaining blade modules.

5-3 Power Supply Fans

Each power supply unit has two to four rear fans. These fans are not hot-swappable. If one fails, the power supply will continue to operate but you should replace the power supply unit at the earliest opportunity. If two or more fans fail, the power supply unit will shut down and the LED on the back will turn amber.
Appendix A
System Specifications

A-1 Enclosure Specifications

NOTE: Up to 8x (N+1 or N+N redundant) 2200W Titanium certified (96% efficiency) AC power supplies or 2000W DC power supplies battery back-up option PDU are required for an enclosure.

Table A-1. 6U Enclosure Specification Features

<table>
<thead>
<tr>
<th>Feature</th>

| Blade Module Support                 | Up to either 14 one or two-socket hot-plug blade servers                                                                                   |
| System Cooling                       | Eight PWM fans in the rear chassis. In addition, up to six (6) optional cooling fan modules can be used in place of four power supplies can be mounted in an enclosure. |
| Power Supplies (modules required varies) | Rated Output Power: 2200W (Part# PWS-2K21-BR, C-14 type socket) power supplies
Rated Output Voltages: +12V (183A), +12Vsb (2A) for 2200W; +12V (174A), +12Vsb (2A) for 2090W; +12V (165A), +12Vsb (2A) for 1980W; +12V (150A), +12Vsb (2A) for 1800W; +12V (100A), +12Vsb (2A) for 1200W
Power Supply Model Numbers:
• PWS-2K21-A BR
• PWS-DF006-2F                                                                 |
| System Input Requirements            | AC Input Voltage: 220~240V AC auto-range for 2200W; 230~240V AC auto-range for 2090W; 220~230V AC auto-range for 1980W; 200~220V AC auto-range for 1800W; 100~127V AC auto-range for 1200W
Rated Input Frequency: 50 to 60 Hz                                             |
| Thermal Range                        | Supermicro’s new 6U SuperBlade Enclosure has a wide thermal support range to incorporate a significant range of CPU TDP, this can range from 85W, 105W, 125W, 130W, 140W, 150W, 155W, 165W and 205W.
A special heatsink is required for the gold CPU with TDP ranging from 165W-200W. Extra wide heatsinks are required for the 205W platinum CPU.
For further details, please check with thermal specifications and advisory for conditional thermal support of 15-32° degree ambient and 10-35° degree ambient temperatures. The 6U system will not support 5-45° degree ambient temperatures. |
