User’s Manual

Revision 1.2c
The information in this User’s Manual has been carefully reviewed and is believed to be accurate. The vendor assumes no responsibility for any inaccuracies that may be contained in this document, makes no commitment to update or to keep current the information in this manual, or to notify any person or organization of the updates. Please Note: For the most up-to-date version of this manual, please see our web site at www.supermicro.com.

Super Micro Computer, Inc. (“Supermicro”) reserves the right to make changes to the product described in this manual at any time and without notice. This product, including software and documentation, is the property of Supermicro and/or its licensors, and is supplied only under a license. Any use or reproduction of this product is not allowed, except as expressly permitted by the terms of said license.

IN NO EVENT WILL SUPERMICRO BE LIABLE FOR DIRECT, INDIRECT, SPECIAL, INCIDENTAL, SPECULATIVE OR CONSEQUENTIAL DAMAGES ARISING FROM THE USE OR INABILITY TO USE THIS PRODUCT OR DOCUMENTATION, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. IN PARTICULAR, SUPERMICRO SHALL NOT HAVE LIABILITY FOR ANY HARDWARE, SOFTWARE, OR DATA STORED OR USED WITH THE PRODUCT, INCLUDING THE COSTS OF REPAIRING, REPLACING, INTEGRATING, INSTALLING OR RECOVERING SUCH HARDWARE, SOFTWARE, OR DATA.

Any disputes arising between manufacturer and customer shall be governed by the laws of Santa Clara County in the State of California, USA. The State of California, County of Santa Clara shall be the exclusive venue for the resolution of any such disputes. Super Micro’s total liability for all claims will not exceed the price paid for the hardware product.

FCC Statement: This equipment has been tested and found to comply with the limits for a Class A digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in industrial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the manufacturer’s instruction manual, may cause harmful interference with radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case you will be required to correct the interference at your own expense.

California Best Management Practices Regulations for Perchlorate Materials: This Perchlorate warning applies only to products containing CR (Manganese Dioxide) Lithium coin cells. Perchlorate Material-special handling may apply. See www.dtsc.ca.gov/hazardouswaste/perchlorate for further details.

WARNING: HANDLING OF LEAD SOLDER MATERIALS USED IN THIS PRODUCT MAY EXPOSE YOU TO LEAD, A CHEMICAL KNOWN TO THE STATE OF CALIFORNIA TO CAUSE BIRTH DEFECTS AND OTHER REPRODUCTIVE HARM.

Preface

About this Manual

This manual is written for professional system integrators, Information Technology professionals, service personnel and technicians. It provides information for the installation and use of Supermicro's 8U SuperBlade system. Installation and maintenance should be performed by experienced professionals only.

Manual Organization

Chapter 1: Introduction

The first chapter provides a checklist of the main components included with the blade system and describes the main features of the mainboard and enclosure. A quick start procedure is also provided for your use.

Chapter 2: System Safety

You should familiarize yourself with this chapter for a general overview of safety precautions that should be followed when installing and servicing the 8U SuperBlade.

Chapter 3: Setup and Installation

Refer here for details on installing the 8U SuperBlade system into a rack.

Chapter 4: System Modules

This chapter covers modules in the 8U SuperBlade system, as well as the CMM module and configuring double-wide bays.

Chapter 5: Power Supply Modules

This chapter covers the system power supplies and their installation.

Appendix A: System Specifications

This appendix provides a summary of system specifications.

Secure Data Deletion

A secure data deletion tool designed to fully erase all data from storage devices can be found on our website: https://www.supermicro.com/about/policies/disclaimer.cfm?url=/wftp/utility/Log9_Secure_Data_Deletion_Utility/

Chapter 1
Introduction

1-1 Overview

The 8U SuperBlade is a compact self-contained system that connects to a pre-cabled enclosure that provides power, cooling, management and networking functions. One enclosure can hold up twenty blade 1 or 2-socket servers, up to ten 4-socket servers, or a mixture of each. This generation of the 8U SuperBlade enclosures deliver a high system density, and incorporate the latest technologies to satisfy the increasing demands of modern technology and higher computing power.

In this manual, “blade” or “blade server” refers to a single blade, and “blade enclosure” refers to the chassis that houses the blades, power supplies and fans. “Blade system” refers to the enclosure, blades units, and various management and networking modules.

Figure 1-1. 8U 820 Series with 20 Blades
1-2 Quick Start Setup

This section covers how to quickly get your new 8U SuperBlade system up and running. Follow the procedure below to quickly setup your 8U SuperBlade system.

1. Unpack the components of your 8U SuperBlade system and check the packing list for damaged or missing components.

2. Select a setup location for your system. See "Choosing a Setup Location" on page 3-1 for details.

3. Mount the 8U SuperBlade chassis in your server rack. See "Installing the System Into a Rack" on page 3-3 for details.

4. Install the power supply modules into the rear of the 8U SuperBlade chassis. See "Installing a Power Supply" on page 5-5 for details.

5. Install the CMM module and any switch modules into the rear of the 8U SuperBlade chassis.
   a. For the CMM module, see "CMM Module Installation" on page 4-7 for details.
   b. For the InfiniBand and Ethernet modules, see the 8U SuperBlade Network Modules User’s Manual for details.
   c. Attach keyboard, mouse and video connections to your CMM module.
   d. Attach network connections for your InfiniBand or Ethernet modules. See the 8U SuperBlade Network Modules User’s Manual for details.

6. Setup your blade modules for use by doing the following:
   a. Open the module case lids of each blade module. Refer to the blade module user’s manual for details.
   b. Install memory into each module. Refer to the blade module user’s manual for details.
   c. Close the module case lids when you have installed your memory for each blade module. Refer to the blade module user’s manual for details.
   d. Install the hard disk drives into each module. Refer to the blade module user’s manual for details.
   e. Install your blade modules into your 8U SuperBlade chassis. Refer to the blade module user’s manual for details.

7. Connect the power cords for your 8U SuperBlade system’s power supply and plug them into your power source ONLY after you have installed and secured all system components.

8. Power up your 8U SuperBlade system. Check to be sure all components are operating right and are not showing any fault LEDs or alarms in their operation.

9. Install your selected operating system for each blade module. Refer to the blade module user’s manual for details.
10. Download a BIOS update for each of your blade modules from the Supermicro website.

**Fan Mode Selection**

Using the Web-based Management Utility, you can specify your 8U SuperBlade system to use a quiet mode for lower fan speed and quieter operation. See Section 4-1: Chassis Management Module on page 4-5 for further details.
1-3  Product Checklist of Typical Components

- Blade Enclosure (x1): SBE-820H/C/CB/J/JB, 822/820D, 820L, 622 and 422 (8U, 10 full-height 2-socket or 20 half-height blades 4-socket)
- Blade Units (minimum of 2, maximum of 10 or 20): See the Supermicro website (http://www.supermicro.com/products/superblade/) for a complete list of blades that can be mounted in your system. Some examples are listed below:

  20 Blade:
  - Dual socket (SP) – SBI-4129P-C2N/T3N
  - Single socket Modular Design (SP) – SBI-4119P-C2N/T2N
  - Dual socket (HSW/BDW) – SBI-4128R-C2N/T2N
  - Dual socket – SBI-420P-1T2N/1T3N
  - Single socket – SBI-4119MG-X
  - Single socket – SBA-4114S-C2N/T2N
  - Single socket – SBA-4114SG
  - Single socket – SBA-4119S-C2N/T2N
  - Single socket – SBA-4119SG
  - Single socket – SBA-4119SG-X

  10 Blade:
  - 4 Way – SBI-8149R-C4N/T8N

- Power Supplies (up to 8): PWS-2K21A
- CMM Module (x1): MBM-CMM-FIO or MBM-CMM-001
- KVM Cable (x1): CBL-0218L

Optional components include:

- InfiniBand® Switch Module: SBM-IBS-E3616, SBM-IBS-H4020
- Omni-Path™ Switch Module: SBM-OPA-C4020
- Blade IPMI Add-on Card: AOC-SB410-001 (front control board with KVM connector)
- Mezzanine Cards (required for operation with the InfiniBand Switch): AOC-IBH-X6HS-B (200-Gbps InfiniBand card), AOC-IBH-X4ED-P (100-Gbps InfiniBand card), AOM-B-4M-100 (M.2 card), AOM-B3108-H8-B11 (SAS3 card), AOM-SB1-SATA31-P (SATA3 card), AOC-OPA-WFR (OPA card),
- Ethernet Switches: MBM-XEM-001 (Broadcom 10-Gbps), MBM-XEM-002 (Intel 10-Gbps), MBM-GEM-001 (Intel 1-Gbps), MBM-GEM-004 (Broadcom 1-Gbps)

Additional modules will periodically become available. Please refer to http://www.supermicro.com/products/superblade for the most current list of modules available for the 8U SuperBlade.

Blade systems install into standard racks. Up to five 8U blade systems may be installed into a 19” industry standard 42U rack.

**Warning:** It is highly recommended that you do not discard or throw away any parts for the system delivered to you since some parts might be required for reconfigurations of the system at a later date.
For some details on the combinations and types of networking modules available, see Table 1-1 below. See the SuperBlade Network Modules User Manual for full details on available modules for the SuperBlade system.

* EOL
1-4 Blade Enclosure Features

Supermicro blade enclosures are designed to house from 10 to 20 blade units. Each accommodates up to eight power supplies. The enclosure mid-plane allows the blade units to share power, cooling and networking. Table 1-2 below describes the components and modules for the enclosure models. Table 1-3 shows the numbers of each network module that may be installed in each enclosure model family.

Please check the Supermicro website for the latest module and enclosure installation information at http://www.supermicro.com/servers/blade/networking/matrix.cfm for further details.

Table 1-2. 8U SuperBlade Enclosure Models

Table 1-3. Number of Network Modules that May Be Installed in each Enclosure
Chapter 1: Introduction

**Power**

The typical blade enclosure features a 2200W power system composed of four, six, or eight power supply modules. An alternate configuration (and required for a full 10 or 20-blade system) features a total of four power supply modules for redundancy. This power redundancy feature allows you to replace the failing power module while the backup module takes over to keep the system running. You must have either two, four or eight power supply modules installed in the blade enclosure (eight is recommended in a full system).

The Chassis Management Module assumes the worst case (maximum) power for any model of blade prior to applying power. If the power supplies cannot supply that amount of the required power for the given load on the power supplies, then the CMM will not allow that unit to power up. After a blade is powered up, the blade’s BIOS calculates the actual power load required by the blade based upon the installed devices and informs the CMM of its requirements. The CMM then adjusts the remaining supply of power for additional blades based upon the actual delta of the total power, minus the amount of power being used by the blades that are powered on.

**Middle Plane**

The middle plane connects the various capabilities of the blades, such as the various speed switch(es) to Network Interface Controller(s), the Chassis Management Module (CMM) to the USB devices and the InfiniBand Switch to the Host Channel Adapters. These devices all connect to the middle plane through high density connectors that provide both signals and power. This type of configuration reduces the amount of system cabling and simplifies the task of setting up the system. It provides an alternative signals route to support redundant power, CMM, network and IPMI functions.

**Note:** Signaling information can NOT be physically routed from one blade to another.

---

* EOL
LEDs

Two LEDs are located at the right top of the enclosure above the last or right most blade. The left LED provides Power Status information and the right LED is the Fault LED.

Enclosure Cooling

The cooling for the entire blade system is provided by the fans in the power supply modules or optional fans that can be installed in place of a power supply. If a power supply fails, its fans will continue to operate to provide continuous cooling. For this reason, a failed power supply should remain installed in the enclosure until a replacement unit is ready.

Fans are controlled by Auto Mode or User Mode (User Mode from level 1 to 10).

**Note:** The fans are very noisy at full speed and it is recommended that they not be run at full speed when in use in an office or near populated workstations.

Three additional cooling fan modules, each with two cooling fans, are in the rear of the enclosure. Also, additional fan modules are available for substitution of power supply slots in the enclosure.

**Note:** In order to prevent air flow leaks that would reduce cooling efficiency in the blade system’s enclosure, install dummy blades to close off any blade slots that do not have active blade modules installed in them.

For overheat problems, check that there are no obstructions (such as poorly routed cables), check that all fans are operating normally and make sure the ambient room temperature is not too warm (refer to Section A-2: Environmental Specifications on page A-2 for the maximum operating temperature). You can also use either of the blade management software utilities to increase the fan speed and maximize system cooling.

1-5 Power Supply Features

The 8U SuperBlade enclosure comes with up to eight power supplies. Each is combined with system fans. Information on the power supplies is summarized below. See Chapter 5 for details.

If you install only four power supplies in the enclosure, they should be installed in the lower rather than the upper power bays. The reason for this counter-intuitive installation is that the power supplies in the lower bays provide increased airflow across the memory modules within each blade module.

In the event of a power overload, add additional power supply modules to take up the load. Otherwise, some blade modules will not power up. The blade BIOS plus CMM firmware calculates the load to determine if the power supplies can adequately handle the total system configuration.
Power Supply Modules

Each power supply module has its own power cord. Eight modules are required when the full complement of blade units are installed into an enclosure. An LED on the back of a power supply will be red when AC power is present and green when the power is on.

Supermicro high-efficiency blade system power supplies deliver continuous redundant power up to 96% peak efficiency. Each power supply module includes a management module that monitors the power supplies and the power enclosure.

See Chapter 5 for specifications and details on the power supplies available for the SuperBlade system.

Power Cord

Each power supply module has a C-14 type socket for AC power and the power cord must have a C-13 type connector to connect to the power supply.

Refer to Appendix A for power/amperage calculation tables. Refer to the supermicro website for further details on power cords.

Power Supply Failure

If a power supply or a fan in a power supply fails, the system management software will notify you of the situation. In either case, you will need to replace the power supply module with another identical one. Please note that if a power supply fails, its fans will continue to operate to provide system cooling. For this reason, a failed power supply should remain installed in the enclosure until a replacement unit is ready.

See Chapter 5 for the procedure on replacing power supplies.

1-6 Special Design Features

Supermicro 8U SuperBlade offers special design features, some of which no other blade server can duplicate. These features give you extraordinary flexibility in configuring a blade system for your own particular needs.

Operating System Support

Please check with the SMC web page for certified OS at: https://www.supermicro.com/support/resources/OS/OS_Certification_Intel.cfm.

Remote Management

The Chassis Management Module (CMM) can manage the whole enclosure and any individual blade module by switching around to it.

Note: Some Blade modules already have onboard BMC.

An additional feature for the SBE-822 enclosures is an extra IPMI and Com port in card (part # FPB-FP820B-IPMI) that attaches to the left carry handle of the enclosure. This allows you a connection in the front of the enclosure for connection to the system.
Computing Density/Power

Dual and quad core processors are supported in the blade module systems. Each 8U SuperBlade mainboard supports two or four processors and up to 2 TB of main memory. This translates to a maximum potential of up to 40 processors and 61 TB of memory per 8U enclosure or 200 processors and 307 TB of memory for a 42U rack.

High-Efficiency Power Supplies

A reliable source of power is critical in server systems and even more so in a blade system, where up to fourteen systems (blades) share the same power source. 8U SuperBlade power supplies have been designed to operate at up to 96% peak efficiency and provide redundancy. Using high-efficiency power supplies results in a measurable reduction in wasted energy consumption and generated heat.

1-7 Returning Merchandise for Service

A receipt or copy of your invoice marked with the date of purchase is required before any warranty service will be rendered. You can obtain service by calling your vendor for a Returned Merchandise Authorization (RMA) number. When returning to the manufacturer, the RMA number should be prominently displayed on the outside of the shipping carton, and mailed prepaid or hand-carried. Shipping and handling charges will be applied for all orders that must be mailed when service is complete.

This warranty only covers normal consumer use and does not cover damages incurred in shipping or from failure due to the alteration, misuse, abuse or improper maintenance of products.

During the warranty period, contact your distributor first for any product problems.

For faster service, RMA authorizations may be requested online at:

Chapter 2
Standardized Warning Statements

2-1 About Standardized Warning Statements

The following statements are industry standard warnings, provided to warn the user of situations which have the potential for bodily injury. Should you have questions or experience difficulty, contact Supermicro’s Technical Support department for assistance. Only certified technicians should attempt to install or configure components. Read this appendix in its entirety before installing or configuring components in the Supermicro chassis.

These warnings may also be found on our web site at http://www.supermicro.com/about/policies/safety_information.cfm.

Warning Definition

Warning!

This warning symbol means danger. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents.

警告の定義

この警告サインは危険を意味します。

人身事故につながる可能性がありますので、いずれの機器でも動作させる前に、
電気回路に含まれる危険性に注意して、標準的な事故防止策に精通して下さい。

此警告符号代表危险。

您正处于可能受到严重伤害的工作环境中，在您使用设备开始工作之前，必须充分意识到触电的危险，并熟练掌握防止事故发生的标准工作程序，请根据每项警告结尾的声明号码找到此设备的安全性警告说明的翻译文本。

此警告符号代表危险。

您正处於可能身體可能會受損傷的工作環境中。在您使用任何設備之前，請注意觸電的危

险，並且要熟悉預防事故發生的標準工作程序。請依照每一注意事項後的號碼找到相關的

翻譯說明內容。
**Warnung**

**WICHTIGE SICHERHEITSHINWEISE**

**BEWAHREN SIE DIESE HINWEISE GUT AUF.**

**INSTRUCCIONES IMPORTANTES DE SEGURIDAD**

Este símbolo de aviso indica peligro. Existe riesgo para su integridad física. Antes de manipular cualquier equipo, considere los riesgos de la corriente eléctrica y familiarícese con los procedimientos estándar de prevención de accidentes. Al final de cada advertencia encontrará el número que le ayudará a encontrar el texto traducido en el apartado de traducciones que acompaña a este dispositivo.

**GUARDE ESTAS INSTRUCCIONES.**

**IMPORTANTES INFORMATIONS DE SÉCURITÉ**

Ce symbole d'avertissement indique un danger. Vous vous trouvez dans une situation pouvant entraîner des blessures ou des dommages corporels. Avant de travailler sur un équipement, soyez conscient des dangers liés aux circuits électriques et familiarisez-vous avec les procédures couramment utilisées pour éviter les accidents. Pour prendre connaissance des traductions des avertissements figurant dans les consignes de sécurité traduites qui accompagnent cet appareil, référez-vous au numéro de l'instruction situé à la fin de chaque avertissement.

**CONSERVEZ CES INFORMATIONS.**
BELANGRIJKE VEILIGHEIDSINSTRUCTIES

Dit waarschuwings symbool betekent gevaar. U verkeert in een situatie die lichamelijk letsel kan veroorzaken. Voordat u aan enige apparatuur gaat werken, dient u zich bewust te zijn van de bij een elektrische installatie betrokken risico's en dient u op de hoogte te zijn van de standaard procedures om ongelukken te voorkomen. Gebruik de nummers aan het eind van elke waarschuwing om deze te herleiden naar de desbetreffende locatie.

BEWAAR DEZE INSTRUCTIES

Installation Instructions

Warning!

Read the installation instructions before connecting the system to the power source.

설치 지침

시스템을 전원에 연결하기 전에 설치 지침을 읽으십시오.

¡Advertencia!

Lea las instrucciones de instalación antes de conectar el sistema a la red de alimentación.

Attention

Avant de brancher le système sur la source d'alimentation, consulter les directives d'installation.

חסריים

יש לקורא את הוראות התקנה לפני חיבור המודול למורחבים ממארת ממוקם.
Circuit Breaker

Warning!
This product relies on the building’s installation for short-circuit (overcurrent) protection. Ensure that the protective device is rated not greater than: 250 V, 20 A.
Power Disconnection Warning

Warning!
The system must be disconnected from all sources of power and the power cord removed from the power supply module(s) before accessing the chassis interior to install or remove system components.

警告
在你打开机箱并安装或移除内部器件前,必须将系统完全断电,并移除电源线。

Warning
Das System muss von allen Quellen der Energie und vom Netzanschlusskabel getrennt sein, das von den Spg.Versorgungsteilmodulen entfernt wird, bevor es auf den Chassisinnenraum zurückgreift, um Systemsbestandteile anzubringen oder zu entfernen.
¡Advertencia!

El sistema debe ser disconnected de todas las fuentes de energía y del cable eléctrico quitado de los módulos de fuente de alimentación antes de tener acceso el interior del chasis para instalar o para quitar componentes de sistema.

Attention

Le système doit être débranché de toutes les sources de puissance ainsi que de son cordon d'alimentation secteur avant d'accéder à l'intérieur du chassis pour installer ou enlever des composants de système.

警告

设备安装

已连接的系统的所有电源和电源线必须从系统中拔除，才能进行安装或移除系统组件。

경고!

시스템에 부품들을 장착하거나 제거하기 위해서는 새시 내부에 접근하기 전에 반드시 전원 공급장치로부터 연결되어있는 모든 전원과 전기코드를 분리해주어야 합니다.

Equipment Installation

Warning!

Only trained and qualified personnel should be allowed to install, replace, or service this equipment.

機器の設置

トレーニングを受け認定された人だっがこの装置の設置、交換、またはサービスを許可されています。

警告

只有经过培训且具有资格的人员才能进行此设备的安装、更换和维修。

警告

只有經過受訓且具資格人員才可安裝、更換與維修此設備。
Chapter 2: Standardized Warning Statements

Warnung
Das Installieren, Ersetzen oder Bedienen dieser Ausrüstung sollte nur geschultem, qualifiziertem Personal gestattet werden.

¡Advertencia!
Solamente el personal calificado debe instalar, reemplazar o utilizar este equipo.

Attention
Il est vivement recommandé de confier l’installation, le remplacement et la maintenance de ces équipements à des personnels qualifiés et expérimentés.

Danger!
This unit is intended for installation in restricted access areas. A restricted access area can be accessed only through the use of a special tool, lock and key, or other means of security. (This warning does not apply to workstations).

Restricted Area

Warning!
This unit is intended for installation in restricted access areas. A restricted access area can be accessed only through the use of a special tool, lock and key, or other means of security. (This warning does not apply to workstations).

アクセス制限区域
このユニットは、アクセス制限区域に设置されることを想定しています。

アクセス制限区域は、特別なツール、鍵と鍵前、その他のセキュリティの手段を用いてののみ出人が可能です。

警告
此部件应安装在限制进出的场所，限制进出的场所指只能通过使用特殊工具、锁和钥匙或其他安全手段进出的场所。

警告
此装置仅限安装于进出管制区域，进出管制区域系指仅能以特殊工具、锁頭及鑰匙或其他安全方式才能进入的區域。
Warnung

Diese Einheit ist zur Installation in Bereichen mit beschränktem Zutritt vorgesehen. Der Zutritt zu derartigen Bereichen ist nur mit einem Spezialwerkzeug, Schloss und Schlüssel oder einer sonstigen Sicherheitsvorkehrung möglich.

¡Advertencia!

Esta unidad ha sido diseñada para instalación en áreas de acceso restringido. Sólo puede obtenerse acceso a una de estas áreas mediante la utilización de una herramienta especial, cerradura con llave u otro medio de seguridad.

Attention

Cet appareil doit être installée dans des zones d'accès réservés. L'accès à une zone d'accès réservé n'est possible qu'en utilisant un outil spécial, un mécanisme de verrouillage et une clé, ou tout autre moyen de sécurité.

אזהרה !

יש להתקין את היחידה במתחםשימש במחיצות ניידות. ההנשה ניירת משתמשים
כלי אבטחה בלבד (מטה, מנעול וכד') .

 remake תחלק את היחידה במחיצות ניירות.

לא ניתן الوصول אל מחיצות ניירות פעמים של אדווהособית, חלון ופתח או כל דרך אחרת לالأمان

경고 !

이 장치는 접근이 제한된 구역에 설치하도록 되어있습니다. 특수도구, 잠금 장치 및 키 , 또는 기타 보안 수단을 통해서만 접근 제한 구역에 들어갈 수 있습니다.

Waarschuwing

Dit apparaat is bedoeld voor installatie in gebieden met een beperkte toegang. Toegang tot dergelijke gebieden kunnen alleen verkregen worden door gebruik te maken van speciaal gereedschap, slot en sleutel of andere veiligheidsmaatregelen.
Battery Handling

Warning!

There is the danger of explosion if the battery is replaced incorrectly. Replace the battery only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

電池の取り扱い

電池交換が正しく行われなかった場合、破裂の危険性があります。交換する電池はメーカーが推奨する型、または同等のものを使用下さい。使用済電池は製造元の指示に従って処分して下さい。

警告

电池更换不当会有爆炸危险，只有使用同类电池或制造商推荐的电池才能更换原有电池。请按制造商的说明处理废旧电池。

警告

電池交換不當有爆炸危險，請使用製造商建議之相同或功能相當的電池更換原有電池。請按照製造商的說明指示處理廢棄電池。

Warnung

Attention

Danger d’explosion si la pile n’est pas remplacée correctement. Ne la remplacer que par une pile de type semblable ou équivalent, recommandée par le fabricant. Jeter les piles usagées conformément aux instructions du fabricant.

¡Advertencia!

Existe peligro de explosión si la batería se reemplaza de manera incorrecta. Reemplazar la batería exclusivamente con el mismo tipo o el equivalente recomendado por el fabricante. Desechar las baterías gastadas según las instrucciones del fabricante.

アハラ

instrumented battery, a battery that is not used, or a battery that is used in a manner that poses a risk of explosion.

Electrolyte solution is highly toxic and should be handled with care.

2-9
Warning!

This unit might have more than one power supply connection. All connections must be removed to de-energize the unit.

冗長電源装置

このユニットは複数の電源装置が接続されている場合があります。

危険

此部件连接的电源可能不止一个，必须将所有电源断开才能停止给该部件供电。

警告

此装置连接的电源可能不只一个，必须切断所有电源才能停止对该装置的供电。

Warnung

Dieses Gerät kann mehr als eine Stromzufuhr haben. Um sicherzustellen, dass der Einheit kein Strom zugeführt wird, müssen alle Verbindungen entfernt werden.

¡Advertencia!

Puede que esta unidad tenga más de una conexión para fuentes de alimentación. Para cortar por completo el suministro de energía, deben desconectarse todas las conexiones.

Attention

Cette unité peut avoir plus d'une connexion d'alimentation. Pour supprimer toute tension et tout courant électrique de l'unité, toutes les connexions d'alimentation doivent être débranchées.
Chapter 2: Standardized Warning Statements

Backplane Voltage

Warning!

Hazardous voltage or energy is present on the backplane when the system is operating. Use caution when servicing.

¡Advertencia!

Cuando el sistema está en funcionamiento, el voltaje del plano trasero es peligroso. Tenga cuidado cuando lo revise.

Attention

Lorsque le système est en fonctionnement, des tensions électriques circulent sur le fond de panier. Prendre des précautions lors de la maintenance.
Warning!

Installation of the equipment must comply with local and national electrical codes.

Comply with Local and National Electrical Codes
תיאום חוקי החשמל הארצי

אזהרה!

התקנת התקנותفق תיאום חוקי החשמל המ покупаים והארכיים.

تركيب המmalink הקירואתית يجب אן י BTN של החוקים המחוקים ו حاجة.

בתקErrorMsg�

2-13
Waarschuwing
Bij installatie van de apparatuur moet worden voldaan aan de lokale en nationale elektriciteitsvoorschriften.

Product Disposal

Warning!
Ultimate disposal of this product should be handled according to all national laws and regulations.

경고!

Hot Swap Fan Warning

*Warning!*

The fans might still be turning when you remove the fan assembly from the chassis. Keep fingers, screwdrivers, and other objects away from the openings in the fan assembly's housing.
Warning!

When installing the product, use the provided or designated connection cables, power cables and AC adaptors. Using any other cables and adaptors could cause a malfunction or a fire. Electrical Appliance and Material Safety Law prohibits the use of UL or CSA-certified cables (that have UL/CSA shown on the code) for any other electrical devices than products designated by Supermicro only.

Power Cable and AC Adapter

Warning!

When installing the product, use the provided or designated connection cables, power cables and AC adaptors. Using any other cables and adaptors could cause a malfunction or a fire. Electrical Appliance and Material Safety Law prohibits the use of UL or CSA-certified cables (that have UL/CSA shown on the code) for any other electrical devices than products designated by Supermicro only.

전체 메트람의 손잡이 및 스크루드라이버, 다른 물체들이 가까이 하지 않도록 배치해 주십시오.

Waarschuwing

Het is mogelijk dat de ventilator nog draait tijdens het verwijderen van het ventilatorenstuk vanuit chassis. Houd uw vingers, schroevendraaiers en eventuele andere voorwerpen uit de buurt van de openingen in de ventilatorbehuizing.

전체 메트람의 손잡이 및 스크루드라이버, 다른 물체들이 가까이 하지 않도록 배치해 주십시오.

전체 메트람의 손잡이 및 스크류드라이버, 다른 물체들이 가까이 하지 않도록 배치해 주십시오.

Waarschuwing

Het is mogelijk dat de ventilator nog draait tijdens het verwijderen van het ventilatorenstuk vanuit chassis. Houd uw vingers, schroevendraaiers en eventuele andere voorwerpen uit de buurt van de openingen in de ventilatorbehuizing.
Chapter 2: Standardized Warning Statements

Warnung

¡Advertencia!

Al instalar el producto, utilice los cables de conexión previstos o designados, los cables y adaptadores de CA. La utilización de otros cables y adaptadores podría ocasionar un mal funcionamiento o un incendio. Aparatos Eléctricos y la Ley de Seguridad del Material prohíbe el uso de UL o CSA cables certificados que tienen UL o CSA se muestra en el código de otros dispositivos eléctricos que los productos designados por Supermicro solamente.

Attention

Lors de l’installation du produit, utilisez les cables de connection fournis ou désigné. L’utilisation d’autres cables et adaptateurs peut provoquer un dysfonctionnement ou un incendie. Appareils électroménagers et de loi sur la sécurité Matériel interdit l’utilisation de UL ou CSA câbles certifiés qui ont UL ou CSA indiqué sur le code pour tous les autres appareils électriques que les produits désignés par Supermicro seulement.

אזהרה

כאשר מתקינים את המוצר, יש להשתמש בכבלים שהותאם וסופקו לשם כך. שימוש בעיצובים אחרים או שבו UL או CSA מותר רק עבור תיירים תקלה או חום.kills חשמליים. על פי חוקי חשמל ו chipset המונים על ידי Supermicro (UL/CSA). נא להשתמש בכבלים שהותאם והם אמורים להיות על ידי Supermicro בכול תיירים תקלה או חוםဘים חשמליים.

AC

אזהרה

경고!

제품을 설치할 때에는 제공되거나 지정된 연결케이블과 전원케이블, AC 어댑터를 사용해야 합니다. 그 밖의 다른 케이블이나 어댑터들은 고장 또는 화재의 원인이 될 수 있습니다. 전기용품안전법 (Electrical Appliance and Material Safety Law) 은 슈퍼마이크로에서 지정한 제품들 외에는 그 밖의 다른 전기 장치들을 위한 UL 또는 CSA에서 인증한 케이블 (전선 위에 UL/CSA가 표시) 들의 사용을 금지합니다.

Waarschuwing

Bij het installeren van het product, gebruik de meegeleverde of aangewezen kabels, stroomkabels en adapters. Het gebruik van andere kabels en adapters kan leiden tot een storing of een brand. Elektrisch apparaat en veiligheidsinformatiebladen wet verbiedt het gebruik van UL of CSA gecertificeerde kabels die UL of CSA die op de code voor andere elektrische apparaten dan de producten die door Supermicro alleen.
Chapter 3: Setup and Installation

3-1 Overview

This chapter provides a quick setup procedure for your 8U SuperBlade. Following these steps in the order given should enable you to have the system operational within a minimum amount of time. This quick setup assumes that the processor(s) and memory have already been installed. If not, please turn to Chapter 4 for details on installing specific components.

3-2 Unpacking the System

You should inspect the box the 8U SuperBlade was shipped in and note if it was damaged in any way. If the server itself shows damage you should file a damage claim with the carrier who delivered it.

 Decide on a suitable location for the rack unit that will hold the 8U SuperBlade. It should be situated in a clean, dust-free area that is well ventilated. Avoid areas where heat, electrical noise and electromagnetic fields are generated. You will also need it placed near a grounded power outlet. Read the "Rack Precautions" and "Server Precautions" in the next section.

The box the 8U SuperBlade was shipped in should include two sets of rail assemblies, two handles and the mounting screws you will need to install the system into the rack. Follow the steps in the order given to complete the installation process in a minimum amount of time. Please read this section in its entirety before you begin the installation procedure outlined in the sections that follow.

Choosing a Setup Location

The following are important considerations for choosing a setup location:

- Leave enough clearance in front of the rack to enable you to remove the blade units (~25 inches).
- Leave approximately 30 inches of clearance behind or to the rear of the rack to allow for sufficient airflow and ease in servicing, as well as clearance for electrical power connections.
- This product is intended for installation only in a Restricted Access Location (dedicated equipment rooms, service closets and the like). This is because the 8U SuperBlade enclosure does not provide any physical security measures.
- This product is not suitable for use with visual display work place devices according to §2 of the German Ordinance for Work with Visual Display Units.

WARNING: Please read the following important Warnings and Precautions!
Rack Precautions
The following are important precautions concerning rack setup:

- The enclosure unit is heavy and requires at least two people to lift it.
- Ensure that the leveling jacks on the bottom of the rack are fully extended to the floor with the full weight of the rack resting on them.
- In single rack installation, stabilizers should be attached to the rack.
- In multiple rack installations the racks frames should be grounded to the same earth ground as the electrical source for the power supplies by means of a grounding strap.

Server Precautions
The following are important precautions concerning server setup:

- Review the electrical and general safety precautions in Chapter 2.
- Determine the placement of each component in the rack before you install the rails.
- Install the heaviest server components on the bottom of the rack first, and then work up.
- Use a regulating uninterrupted power supply (UPS) to protect the server from power surges, voltage spikes and to keep your system operating in case of a power failure.
- Allow the hot plug hard drives and power supply units to cool before touching them.
- Always keep the rack's front door and all panels and components on the servers closed when not servicing to maintain proper cooling.

Rack Mounting Considerations
Below are listed important considerations for rack mounting.

**Ambient Operating Temperature**
If installed in a closed or multi-unit rack assembly, the ambient operating temperature of the rack environment may be greater than the ambient temperature of the room. Therefore, consideration should be given to installing the equipment in an environment compatible with the manufacturer’s maximum rated ambient temperature. Refer to Appendix E for operating temperature specifications.

**Reduced Airflow**
Equipment should be mounted into a rack so that the amount of airflow required for safe operation is not compromised.

**Mechanical Loading**
Equipment should be mounted into a rack so that a hazardous condition does not arise due to uneven mechanical loading.
**Circuit Overloading**

Consideration should be given to the connection of the equipment to the power supply circuitry and the effect that any possible overloading of circuits might have on over-current protection and power supply wiring. Appropriate consideration of equipment nameplate ratings should be used when addressing this concern. See the power calculation tables in Appendix A.

**Reliable Ground**

A reliable ground must be maintained at all times. To ensure this, the rack itself should be grounded. Particular attention should be given to power supply connections other than the direct connections to the branch circuit (such as the use of power strips and so on).

**NOTE:** It is recommended that you seek the advice and assistance of a licensed electrician that can advise you on best practices for ensuring that the electrical supply and the rack are joined to a *Common Bonding Network*.

Professional documents on grounding techniques include:

- ANSI/TIA-942 – *Telecommunications Infrastructure Standard for Data Centers*
- J-STD-607-A-2002 – *Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications*
- IEEE Std 1100™-2005 (IEEE Emerald Book) – *IEEE Recommended Practice for Powering and Grounding Electronic Equipment*

**Installing the System Into a Rack**

This section provides information on installing the 8U SuperBlade into a rack. There are a variety of rack units on the market, meaning the procedure may differ slightly. Refer to the Enclosure Template that was included with the system for help.

**Rack Mounting Hardware**

The following is a list of rack mounting hardware you will need for rack setup and installation:

- Two rail assemblies (one for each side of the enclosure)
- Two handles
- Four roundhead screws for fastening the enclosure ears to the rack
- Eight flathead screws and washers for mounting the rails to the rack
## Installation

Use the procedure below for installing an enclosure in a rack.

**Installing an enclosure:**

1. Decide where you want to place the blade enclosure into the rack (see "Rack Mounting Considerations" in the previous section).

2. Position the Enclosure Template at the front of the enclosure to determine the locations of the screws for the enclosure rails (see Figure 3-1).

![Figure 3-1. Positioning the Enclosure Template](image)

3. The two enclosure rail sections are screwed together to keep them immobile during shipping. Release these screws just enough to allow the rails to slide apart. Note the arrow on the rail, which indicates the end that attaches to the front of the rack.

4. Slide the rails apart far enough to match the depth of the rack. Position the rails with the template and secure the front of each to the front of the rack with two flathead screws, then secure the back of each rail to the rear of the rack with two flathead screws (see Figure 3-2). Note that the rails are left/right specific and very heavy.

![Figure 3-2. Securing the Rails to the Rack](image)

5. (Optional step) Add the front left and right handles to the enclosure using five screws to secure each handle. Install a thumbscrew through the bottom hole of each handle (see Figure 3-4).
NOTE: These handles are optional and need only be installed when mounting the system into a short rack. When mounting into a deep rack, they are unnecessary and regular screws should be used instead of thumbscrews.

Be aware that these handles are not to be used for lifting the system, they are only to be used to slide the system within the rack.

6. With one person on either side (see the descriptive label on the side of the enclosure), lift the enclosure and slide it into the installed rails.

WARNING: Be sure that the enclosure is empty of all blades, power supplies, switches and management modules **BEFORE** lifting. These should be installed **AFTER** the enclosure is mounted in the rack. Injury and damage may occur if components are not removed from the rack prior to installation.

7. After pushing the enclosure all the way into the rack, use two roundhead screws on each side of the server to lock it into place.
8. The enclosure is now securely installed in the rack (see Figure 3-5).

Figure 3-5. Enclosure Installed into Rack
Chapter 4
System Modules

In addition to the blade units, your blade system comes equipped with one or more system modules. The modules fit into the rear of the enclosure into bays above and/or below the power supplies. This chapter describes the various blade modules that may be part of your blade system. Module configurations can be customized; you can install two of the same type module for redundancy purposes or you may omit a module altogether (except for the CMM, which is a required module). Figure 4-1 shows a typical module configuration in a blade system. See Chapter 5 for information on power supply modules.

**WARNING:** All module bays must be populated either with a module or a dummy module cover to maintain proper airflow.

![Figure 4-1. 8U 820C Enclosure with 100G Switch: Rear View](image)
Figure 4-2. 8U 820J Enclosure with 2x25G and 2x10G Switches: Rear View

NOTE: When setting up a bay, the single wide bay is for 10G/25G switches, while the triple wide bay uses 100G switches for the 8U SuperBlade system.

4-1 Chassis Management Module

The Chassis Management Module (CMM) (Figure 4-5) is a required module in a blade system. This “command” module communicates with the blade units, the power supplies and the blade switches. Used in conjunction with the Web Interface or IPMI View management software, the CMM provides administrator control over individual blade units, power supplies, cooling fans and networking switches and monitors onboard temperatures, power status, voltage levels and fan speeds. The standard CMM module for the 8U SuperBlade system is the **MBM-CMM-FIO or MBM-CMM-001**.

**NOTE:** Using the MBM-CMM-FIO in the enclosure allows the use of the two front mounted RJ45 ports on the enclosure, however using the MBM-CMM-001 does not allow these ports to function.

The CMM provides a dedicated, local and remote KVM (keyboard/video/mouse) connection over an out of band TCP/IP Ethernet network during any server state (functioning, blue-screen, powered down, BIOS and so on). It also supports Virtual Media (VM) redirection for CD, floppy and USB mass storage devices and configures such information as the switch IP addresses. A summary of CMM features is shown in **Table 4-5**.

Module Redundancy

A blade system must have one CMM and may have two for redundancy is offered only on a specific enclosure model, which has the hardware capability to incorporate two CMM's on one backplane. Since the CMM uses its own processor, all monitoring and control functions are carried out regardless of the operation or power status of the blade units. CMM modules can only be installed in the upper and/or lower right module bays.

Determining Master/Slave Modules Status

When a blade system has two CMM modules, they are assigned a master/slave status. This is done automatically with the default primary CMM specified for each enclosure, while there will be no redundant in certain enclosures.

If the master CMM is powered down or removed (or is being reset by its user), the second (slave) CMM module will then immediately be assigned as the master. The redundant CMM mode is only offered on specific chassis models. The slave uses the previous master IP config in case of a fail over.

NOTE: The Slave CMM keeps the same log/status as the Master CMM and uses the previous master IP config.

CMM Module Installation

Use this procedure to install the MBM-CMM-FIO or MBM-CMM-001 CMM module to the 8U SuperBlade chassis. Make sure the cover to the module has been installed before proceeding. Follow the anti-static precautions described in Chapter 2.

**Installing the Module:**

1. Remove the dummy cover from the bay you want to place the module in.
2. Place the module's release handle in the open position.
3. Slide the module into the module bay until it stops.
4. Push the release handle to the closed position.
5. After the module has been installed and the handle locked, it will turn on and a POST test will run to verify it is working properly.

Removing the Module:
1. Pull out the release handle to the open position.
2. Pull the module out of the bay.
3. Replace immediately with another module or with a dummy module cover to maintain airflow integrity.

Configuring the CMM

To access/configure the CMM, you first have to configure the IP settings of the CMM depending on you network environment. The below procedure for this configuration just serves as a reference for getting the CMM setup. If your system has Linux OS, please follow similar instructions to get the CMM setup.

The CMM access topology is as follows:

**DHCP Access:**
1. Connect a network cable to the CMM module.
2. The system should boot into the default Fail Over mode. The DHCP mode will appear on the CLI mode screen.
3. If the system fail over and CLI is not active, it will proceed to the next default IP of CMM at [https://192.168.100.100](https://192.168.100.100).
4. If the CMM cannot enter the default IP, then an RJ45/USB cable can be connected from the CMM's RJ45 Ethernet LAN Port to the Desktop Host using the USB Port in Serial Port mode with a speed set at 115200. The DHCP IP can be manually set at the same subnet-mask for gateway access at 192.168.100.100.01.

**Default IP Access:**
1. Connect network cable to the network port at CMM.
2. At system Prompt, [https://192.168.100.100](https://192.168.100.100)

Requirements are:
- Computer system with LAN (RJ45) port
- RJ -45 Ethernet cable

The default IP of the CMM is [https://192.168.100.100](https://192.168.100.100). Configure the Computer system (connected through Ethernet-LAN to the CMM) to the same address range (for example [https://192.168.100.101](https://192.168.100.101)). The default mode is the Fail Over mode. If the DHCP fails, then the CMM will automatically default to the IP address of the CMM.

**Configuring the CMM in Windows OS:**
1. Go to **START** → **CONTROL PANEL** → **NETWORK CONNECTIONS**
2. Right-click on **LAN** to view properties.
3. Choose “Internet Protocol (TCP/IP)” under the GENERAL tab and click on PROPERTIES (see Figure 4-7).

**Figure 4-7. Choose Internal Protocol**

4. Manually configure the IP address of the computer system to be in the same address range as the CMM (see Figure 4-8).

Example:

- **IP address:** [https://192.168.100.101](https://192.168.100.101)
- **Subnet Mask:** 255.255.255.0
- **Default Gateway:** 192.168.100.1

**Figure 4-8. Manually Configure the IP Address**

5. Once the IP address for the computer system is configured, the CMM can be accessed through the web browser by entering the default IP address 192.168.100.100 of the CMM into the browser’s address bar.
6. Now, the IP address, subnet mask and default gateway of the CMM can be changed according to the network environment (see Figure 4-9). Please refer to the *Web-based Management Utility User’s Manual* for more information.

**Figure 4-9. Changing Settings**

![CMM Network](image)

**WARNING**: Don't change any other setting, unless you are familiar with it.

**NOTE**: The above screens are examples for purposes of demonstrating this procedure. The screens you actually view may or may not appear the same as those shown above.

**CMM Functions**

The following sections describe local functions and remote functions of the CMM. With only minor exceptions, all of the remote functions can be performed by one of three mechanisms: web-based access to the CMM module, access to the CMM using *IPMIview*, a client tool implemented in Java, or via *IPMItool* commands (DOS commands or shell scripted commands).

When the web based browser is used, the CMM acts as a web server, requiring a higher bandwidth connection to the CMM. If there are any bandwidth constraints, IPMI will provide a superior experience. Additionally, since graphical updates are provided by client-side Java, IPMIview can also be a superior user experience.

*IPMItool* on the other hand can provide the ability to issue similar/identical commands to many 8U SuperBlade enclosures/CMM's to manage all of them in a similar way.
Remote KVM over IP

Remote KVM over IP is independent from local KVM (although local KVM can operate in parallel with Remote KVM). Remote KVM encrypts all communication between the remote user and the CMM.

To Use: Remote KVM over IP is initiated with the management software (IPMI View or Web-based utility). Attach the LAN cable to the LAN port on the CMM module then refer to "Web-based Management Utility" on page 4-13 to login and use either utility.

Remote Storage (Virtual Media)

The Remote Storage function allows the user to connect to a remote storage device (such as a floppy, hard disk, or USB storage device) and access the device as if it were local. This can be used not only to read and write to remote storage devices but to load an operating system from a remote drive.

Serial Over LAN (SOL)

Serial Over LAN allows you to redirect the input and output of a serial port via IPMI in order to manage blade modules from a remote location.

To Use: Serial Over LAN can be activated via the Web-based Management utility. See the Web-based Management Utility User’s Manual for the procedure to initiate SOL.

Monitoring Functions

Used in conjunction with IPMI or the Web-based Management utility, the CMM module can monitor and provide information on the hardware health of the blade modules and the system as a whole. In addition to the monitoring functions, you can remotely power on, power off or reboot a system.

Health information includes:

- Temperature levels
- Fan speeds
- Voltage levels
- Power status

Power Consumption Management

The CMM module’s firmware can also control all power on/off activity in the whole blade system. This is done by using the Power button, onboard BMC or from any other use of remote management software.

Once a blade module is installed in the enclosure the installed CMM immediately receives information on the rated Max Power Consumption value of the new blade module. The CMM then calculates whether there is enough power for this new blade module by comparing the Max Power Consumption value of the new blade module with the calculated Remaining Power value of the system.
If there is enough power, the CMM will power on the blade. However if there is not enough power in the blade system, then the new blade module is not powered on and the front panel LED on the enclosure will blink.

After the blade is powered on, the CMM then collects the actual power consumption of this individual blade and updates the calculated Remaining Power value for the system.

The CMM also reserves power for all the networking and chassis management modules installed on the system.

**WARNING:** One CMM module must be running to control the power systems and prevent overloading.

**USB Ports and Reset Button**

The USB Ports and Reset Button on the CMM are described below.

![Figure 4-10. USB Ports on CMM](image)
**USB Ports**

The USB ports on both CMM modules are shown in Figure 4-10. They are only used for debugging purposes and not for communication with your system.

**Reset Button**

The Reset button located on the front of the CMM module is used to reset the following software settings to their defaults:

<table>
<thead>
<tr>
<th>Software Setting</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>IP Address</td>
<td>Reset to <strong><a href="https://192.168.100.100">https://192.168.100.100</a></strong></td>
</tr>
<tr>
<td>Gateway Address</td>
<td>Reset to 0.0.0.0</td>
</tr>
<tr>
<td>Subnet Mask</td>
<td>Reset to 255.255.255.0</td>
</tr>
</tbody>
</table>

To reset the CMM to factory defaults, press and hold the Reset button for five seconds.

**Firmware**

The firmware for the CMM switch resides in the module. This firmware can be updated with the web-based management utility.

Within the utility, go to the MAINTENANCE > UPDATE FIRMWARE screen in the Web-based Management Utility. Here you can enter the name of the firmware you want to update or click on BROWSE to select the firmware file. Finish by clicking the UPLOAD button.

**NOTE:** This process is not reversible once the firmware is updated, so proceed with caution. It might take a few minutes to complete this procedure.

**Web-based Management Utility**

System management may be performed with either of three software packages: IPMIview, SMCIPMItool or a Web-based Management Utility. Any of these utilities are designed to provide an administrator with a comprehensive set of functions and monitored data to keep tabs on the system and perform management activities.

The Web-based Management Utility is a web-based interface that consolidates and simplifies system management for Supermicro 8U SuperBlade systems. The Web-based Management Utility aggregates and displays data from the CMM module.

The Web-based Management Utility provides the following key management features:

- Enables IT administrators to view in-depth hardware configuration and status information using a single intuitive interface.
- Provides an OS-independent, remote graphical console.
- Allows remote users to map local media (floppy, removable disks and hard drives) or ISO images on a shared network drive to a blade server.
**Supported Browsers**

The following browsers have been tested for use with the Web-based Management Utility. It is recommended that you use the most current revision of the browser you choose. The minimum browser revisions supported by the Web-based Management Utility are shown below:

- Internet Explorer 7
- Firefox 2.0.0.7
- Netscape 9.03b

**Network Connection/Login**

To log into the Web-based Management Utility:

1. Launch a web browser.
2. In the address field of the browser, enter the IP address that you assigned to the system and hit the <ENTER> key.
3. When the browser makes contact with Supermicro’s Chassis Management Module, enter your **username** and **password**, then click LOGIN.
4. The **WEB-BASED MANAGEMENT UTILITY HOME PAGE** will then display as shown in Figure 4-11.

**Note:** Supermicro ships standard products with a unique password for the BMC ADMIN user. This password can be found on a label on the motherboard. For more information, please refer to our website at [https://www.supermicro.com/en/support/BMC_Unique_Password](https://www.supermicro.com/en/support/BMC_Unique_Password) and [https://www.supermicro.com/support/BMC_Unique_Password_Guide.pdf](https://www.supermicro.com/support/BMC_Unique_Password_Guide.pdf) for further information.

**Address Defaults**

Table 4-9 shows the default addresses that are initially set for the CMM. Afterwards, you can change these values within the program (see the *Web-based Management Utility User’s Manual* M for more details).

<table>

Chapter 5
Power Supply Modules

The 8U SuperBlade enclosure comes standard with one CMM module (see the Chapter 4 for details on the CMM module) and either two or four power supplies. See Appendix A for summary specification details on the power supplies available to the 8U SuperBlade enclosure.

5-1 Power Supply Modules

The minimum amount of modules required to power the system depends upon the full complement of blade units installed into an enclosure and the type of switches installed in the enclosure. An LED on the back of a power supply will be green when AC power is present and amber color when it fails.

When installing only a few power supplies in the enclosure, they should be installed first in the lower rather than the upper power bays. This is to provide increased airflow across the memory modules within each blade module.

The 2200W power supply modules require a 100-240V AC input and a C14 socket, which requires a power cord with a C13 connector.

Supermicro’s high-efficiency blade system power supplies deliver continuous redundant power up to 94% peak efficiency. Each power supply module includes a management module that monitors the power supplies and the power enclosure.

The features of these power supplies are shown below.

BPP Batteries

BPP Batteries, like all rechargeable batteries, are consumable components that eventually their capacity and performance decline as they age. Regular maintenance by charge and discharge cycles is recommended to maintain the effectiveness of the BPP batteries. At least one charge and discharge cycle for every 30 days is recommended. The BPP maintenance scheduler can be enabled and configured through the CMM.

When the BPP function is disabled through the CMM, the battery will discharge until the minimum energy state is reached. While the battery function is disabled, regular BPP maintenance cannot be performed since the battery energy remains at the lowest state and will not re-charge. As a result, the battery capacity and performance will decline at a faster pace, and/or cause the battery to no longer operate. The battery will remain the minimum charge until the BPP function is again re-enabled through CMM. The user should use the disabling BPP function with caution knowing that the possible outcome of degraded battery performance or not operational battery.

Figure 5-2. PWS-1K20B-BR Battery Backup Power (BPP) Module
Under typical conditions, the above is the estimated runtime for the BPP modules. The runtime can be extended by adding additional BPP modules to a system.

Power Supply Failure

If a power supply or a fan in a power supply fails, the system management software will notify you of the situation. In either case, you will need to replace the power supply module with another identical one.

NOTE: Refer to www.supermicro/products/superblade for possible updates on part numbers.

Installing a Power Supply

1. Insert a replacement unit into the empty power bay with the handle to the left.

WARNING: This left/right orientation depends on the power supply’s top or bottom location. If you inadvertently put a power supply upside down in the lower slots, it can be VERY difficult to remove the power supply.

2. Push unit all the way in until it is firmly seated.

3. Push the handle back into the closed position until it clicks into the locked position.

4. Move the locking clip away from the socket and reconnect the power cord.

Removing a Power Supply

First, make sure the power supply has been shut down. You can remove power from a power unit via your system management software.

1. Remove the power cord from the power supply unit.

2. Release the locking clip to unlock the power supply module.

3. Pull out the handle and remove the unit: the two-piece handle locks into the closed position. To release the handle, squeeze together the two metal plates of the handle with your thumb and fingers and then pull out.

5-2 Redundant Power Supplies

Each blade enclosure can hold up to eight power supplies. Installing all four power supplies may provide you with redundant power – depending upon the number of blades in the enclosure, the model and power level of the power supplies installed and the power load from modules in your system. In most blade enclosure systems power supplies may be redundant and therefore provide backup in case of power supply failure. The configuration for power redundancy is created using the IPMIView application tool for the system.

For purposes of denoting the amount of redundancy, a server system has $N$ main power supplies to support the whole system working, with a “+” number after the $N$ denoting the number of redundant power supplies. Hence, if there is one power supply for redundancy in a system that has the feature of “redundant power”, the total of power supplies for that server system is denoted as $N+1$. 
For example, suppose a 10-blade system has four 2200 Watt Power Supply Units (PSU), for a total power supply of 8800 Watts. The maximum power usage of each blade is 375 Watts for a total power demand of 3750 Watts to run the whole system. So in this example there are effectively two redundant power supplies (N+1) over what is needed to power the blades in the system.

In the IPMIView tool you can set the priority (default CPU power usage) of each blade first before any PSU fails (0%->shut down, 50%->throttling, 100%->Running). See Figure 5-3 below for an example.

Figure 5-3. Power Supply Status

Therefore the following redundancies apply to your system when, as an example, 2200W power supplies fail.

- If one PSU fails, then you have 6600 Watts available. The CMM will detect the remaining power left for the whole system. But because the total blade power usage is only 3750 Watts, every blade can still work properly.
- If 2 PSUs fail, then only 4400 Watts are left available to support the blade power usage. The system can still support all ten blades running in it.
- If 3 PSUs fail, then the remaining 2200 Watts available cannot support the whole system. Therefore the CMM will start to shut down or throttle down the load in order to keep blades running based upon the priority settings that were made for each blade using the IPMIView application until the load is enough to power the remaining blade modules.
5-3 Power Supply Fans

Each power supply unit has two to four rear fans. These fans are not hot-swappable. If one fails, the power supply will continue to operate but you should replace the power supply unit at the earliest opportunity. If two or more fans fail, the power supply unit will shut down and the LED on the back will turn amber.

<td>Blade Module Support</td>
<td>Up to either 10 full-height, 4-socket or 20 half-height, 2 socket hot-plug blade modules</td>
</tr>
<tr>
<td>System Cooling</td>
<td>Three twin-PWM fan modules in the rear chassis. In addition, up to four (4) optional cooling fan modules can be used in place of four power supplies can be mounted in an enclosure.</td>
</tr>
</tbody>
</table>
| Power Supplies (modules required varies) | Rated Output Power: 2200W (Part# PWS-2K21-BR, C-20 type socket)  
Rated Output Voltages: +12V (183A), +12Vsb (2A) for 2200W; +12V (174A), +12Vsb (2A) for 1980W; +12V (150A), +12Vsb (2A) for 1800W; +12V (100A), +12Vsb (2A) for 1200W  
Power Supply Model Numbers:  
• PWS-2K21A-BR (for the SBE-820C-822 enclosure)  
• PWS-DF006-2F (for the SBE-820C-622 enclosure)  
• PWS-DF005-2F (for the SBE-820C-42 enclosure) |
| System Input Requirements | AC Input Voltage: 220~240V AC auto-range for 2200W; 230~240V AC auto-range for 2090W; 220~230V AC auto-range for 1980W; 200~220V AC auto-range for 1800W; 100-127V AC auto-range for 1200W  
Rated Input Frequency: 50 to 60 Hz |
| Thermal Range | Supermicro’s new 8U SuperBlade Enclosure has a wide thermal support range to incorporate a significant range of CPU TDP, this can range from 85W, 105W, 125W, 130W, 140W, 150W, 155W, 165W and 205W.  
A special heatsink is required for the gold CPU with TDP ranging from 165W-200W. Extra wide heatsinks are required for the 205W platinum CPU.  
For further details, please check with thermal specifications and advisory for conditional thermal support of 15-32° degree ambient and 10-35° degree ambient temperatures. The 8U system will not support 5-45° degree ambient temperatures. |

**NOTE:** Up to 8x (N+1 or N+N redundant) 2200W Titanium certified (96% efficiency) AC power supplies or 2000W DC power supplies battery back-up option on SBE-820C/E-422 PDU specs and requirements for rack.
