

Supermicro uCPE Solution Brief

The SuperServer 5019D-FN8TP is an Intel® Select Solution for uCPE.

- **Overview**

Universal customer premises equipment (uCPE) is an emerging category of network functions virtualization (NFV)-based edge computing and service provisioning systems. This new generation of systems provides network platform suppliers, systems integrators and software vendors the ability to quickly deliver managed services using software-driven and virtual network functions (VNFs). This in turn enables service agility for customers from the fields of software-defined-startup, telecom operators, service providers or enterprise infrastructure.

Now, with Supermicro's verified Intel® Select Solution for uCPE, service providers should be able to quickly and efficiently deploy various NFV applications more securely and easily than ever before. This solution can eliminate the need for proprietary purpose-built servers that are hard to manage and maintain.

With Supermicro's solution, which features tested and optimized configurations, end users will spend less time, effort, and expense evaluating hardware and software options. Supermicro's verified Intel® Select Solution for uCPE will help end users simplify design choices by bundling hardware and software pieces together while making high performance easier than before.

- **Ease Adoption of SD-WAN**

Current generation network equipment is based on purpose-built proprietary hardware. These appliances are single function boxes that are complex to maintain as well as slow and expensive to upgrade. They inhibit network platform suppliers from dynamically offering new network services and functions.

Adapting Supermicro uCPE can help network service providers take advantage of technology innovation in software defined networking (SDN) and NFV, which are complementary but increasingly co-dependent for the benefits of software-defined networking to be fully realized. A network service provider could run multiple VNFs—such as a router, VPN, and a firewall—on a general-purpose server based on end-user demand. They have the flexibility to deploy new network functions and service without deploying new hardware servers, attributing to significant CAPEX & OPEX reduction as well as speed and ease in deployment of new services.

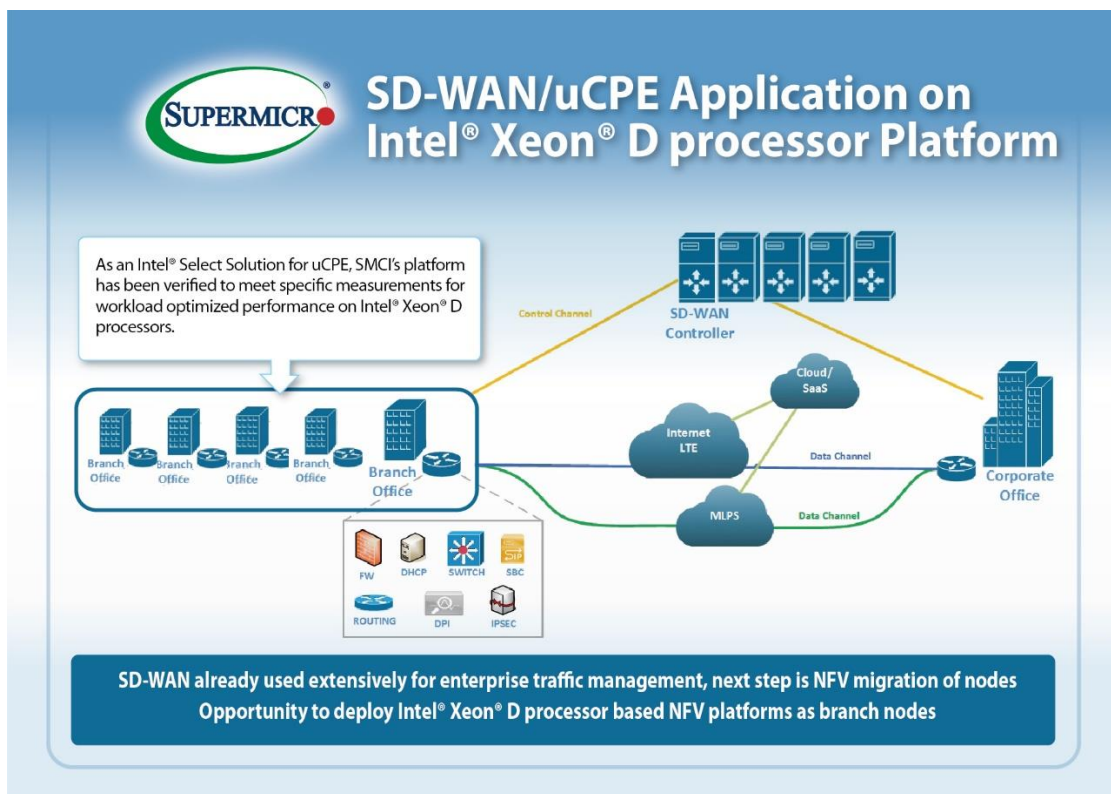

Supermicro's verified Intel Select Solution for uCPE comes tested to allow easy integration with a variety of VNFs, including SD-WAN (software defined-WAN). SD-WAN has its roots in SDN, the underlying principle of which is to abstract the network hardware and transport characteristics

from the applications that use the network. With this innovation, SD-WAN is able to deliver increased network agility and cost reduction compared to traditional WANs.

Rather than manually configuring and managing all WAN devices, including those at remote locations, SD-WAN overlay architecture enables you to centrally manage WAN infrastructure through a single interface. A hybrid approach to your WAN infrastructure in both MPLS (Multi-Protocol Label Switching) & SD-WAN will also increase the variety and complexity of performance issues. The market still has major challenges to address such as:

1. Is it better to adopt a fully managed SD-WAN or should control be preserved in-house?
2. Is there even a middle-ground that alleviates much of the day-to-day burdens without risking availability or data integrity?
3. Will it become a bottleneck when managing networks across remote locations to Headquarters?

Supermicro's verified Intel Select Solution for uCPE addresses these challenges of adopting SD-WAN by providing an integrated hardware and software platform with verified performance to ease decision making and speed deployments.

● Supermicro's uCPE Solution

- <https://www.supermicro.com/products/system/1u/5019/SYS-5019D-FN8TP.cfm>
- Key Feature
 - CPU: Intel® Xeon® processor D-2146NT, 8-Core, 16 Threads w/ built-in Intel Quick Assist Technology for Crypto/Compression application

- Memory:
 - Up to 512GB ECC LRDIMM DDR4-2666MHz or up to 256GB ECC/non-ECC RDIMM DDR4-2666MHz in four slots
- Storage:
 - 1x Internal 3.5" drive-bay or 4x Internal 2.5" drive-bays
- PCIe Expansion:
 - 1x M.2 M key for SSD in 2280
 - 1x M.2 B Key for wireless communication card in 2242
 - 1x Mini-PCI-E with mSATA Support
 - 1 PCIe 3.0 x8 slot
- Network Interface
 - Copper: 4x 1GbE and 2x 10G Based-T ports
 - Fiber: 2x 10G SFP+ ports
- Other I/O Interface:
 - 1x dedicated LAN for IPMI 2.0
 - 1x VGA & 2x USB 3.0
- Cooling Fan: 3x 40x28mm Delta 4-PIN PWM fans
- PSU: 200W Low-noise AC-DC power supply

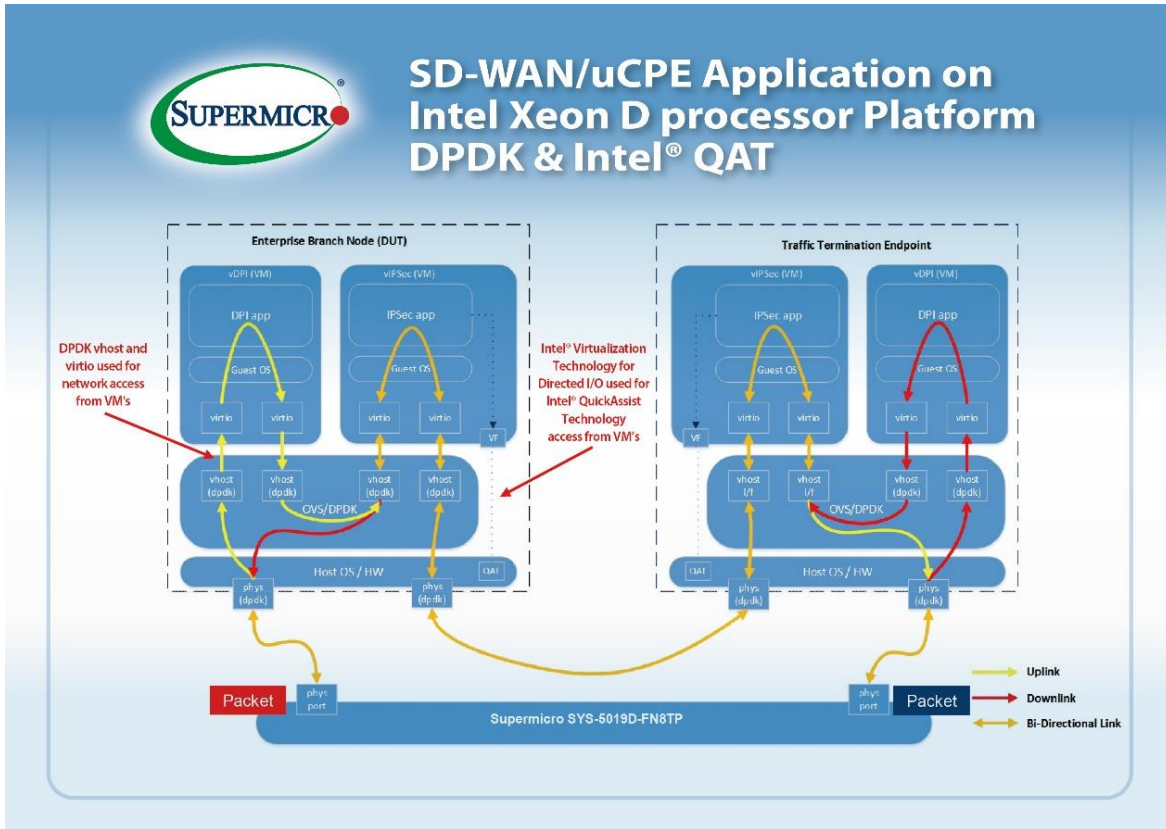

Intel® Select Solution for uCPE HW Configuration

Ingredient	Requirement
Platform	Intel® Xeon® D Processor Family
CPU	Intel® Xeon® D – 2123IT SKU, 4C 2.2 GHz 60W or higher SKU
Memory	16 GB DDR4 2133 MHz, 4 * 4 GB Total of 16 GB Minimum all four memory channels populated (1 DPC) to achieve 16 GB (i.e., 4 * 4 GB RDIMM)
NIC	2 x 10 GbE Integrated Ethernet ports
Intel® QAT	Integrated Intel® QuickAssist Technology or Intel® QuickAssist 8970 PCIe* add-in card or equivalent third party Intel® C62x Series Chipset QAT Enabled PCIe* add-in card
Storage	Intel® Solid State Drive Data Center S3110 256 GB 2.5" (SATA or M.2)

• Conclusion

Supermicro offers a variety of market-ready uCPE solutions with full validation in each BIOS, firmware, operating system, and VM level certification. For example, Supermicro servers using Intel Xeon D-2100 processors and Intel Atom® C3000 processors are already on the list of VMware HCL compatibility with latest ESXi 6.7, which means customers can easily apply virtual machines on the top of Supermicro uCPE. With the SuperServer 5019D-FN8TP verified as an

Intel® Select Solution for uCPE, Supermicro now offers its customers a new, additional degree of confidence. Those looking to easily adopt SD-WAN can know that the SuperServer 5019D-FN8TP offers not just easy deployment but also verified, workload-optimized performance.

About Super Micro Computer Inc. (NASDAQ: SMCI)

Supermicro (NASDAQ: SMCI), the leading innovator in high-performance, high-efficiency server technology is a premier provider of advanced server Building Block Solutions® for Data Center, Cloud Computing, Enterprise IT, Hadoop/Big Data, HPC and Embedded Systems worldwide. Supermicro is committed to protecting the environment through its “We Keep IT Green®” initiative and provides customers with the most energy-efficient, environmentally-friendly solutions available on the market. Supermicro, Building Block Solutions and We Keep IT Green are trademarks and/or registered trademarks of Super Micro Computer, Inc.

About Intel® Select Solutions

Intel is driving the next wave of data center innovation with Intel Select Solutions, based on Intel technologies. Intel Select Solutions are verified solutions configurations that are aimed to speed selection and deployment of data center and communications network infrastructure. The solutions are developed from deep Intel experience with industry solution providers, as well as extensive collaboration with the world’s leading data center and service providers. Intel, the Intel logo, Intel Atom, and Xeon are trademarks of Intel Corporation or its subsidiaries in the U.S. and/or other countries.

All other brands, names and trademarks are the property of their respective owners.
